Complex Evolutionary Dynamics in Urban-Regional and Ecologic-Economic Systems J. Barkley Rosser, 2011-06-22 Drawing on the middle chapters from the first edition of J Barkley Rosser s seminal work From Catastrophe to Chaos this book presents an unusual perspective on economics and economic analysis Current economic theory largely depends upon assuming that the world is fundamentally continuous However an increasing amount of economic research has been done using approaches that allow for discontinuities such as catastrophe theory chaos theory synergetics and fractal geometry The spread of such approaches across a variety of disciplines of thought has constituted a virtual intellectual revolution in recent years This book reviews the applications of these approaches in various subdisciplines of economics and draws upon past economic thinkers to develop an integrated view of economics as a whole from the perspective of inherent discontinuity

Ecological Complexity and Agroecology John Vandermeer, Ivette Perfecto, 2017-10-24 This text reflects the immense current growth in interest in agroecology and changing approaches to it While it is acknowledged that the science of ecology should be the basis of agroecological planning many analysts have out of date ideas about contemporary ecology Ecology has come a long way since the old days of the balance of nature and other romantic notions of how ecological systems function In this context the new science of complexity has become extremely important in the modern science of ecology The problem is that it tends to be too mathematical and technical and thus off putting for the average student of agroecology especially those new to the subject Therefore this book seeks to present ideas about ecological complexity with a minimum of formal mathematics The book s organization consists of an introductory chapter and a second chapter providing some of the background to basic ecological topics as they are relevant to agroecosystems e g soil biology and pest control The core of the book consists of seven chapters on key intersecting themes of ecological complexity including issues such as spatial patterns network theory and tipping points illustrated by examples from agroecology and agricultural systems from around the world

Evolutionary Algorithms and Agricultural Systems David G. Mayer, 2012-12-06 Evolutionary Algorithms and Agricultural Systems deals with the practical application of evolutionary algorithms to the study and management of agricultural systems The rationale of systems research methodology is introduced and examples listed of real world applications It is the integration of these agricultural systems models with optimization techniques primarily genetic algorithms which forms the focus of this book The advantages are outlined with examples of agricultural models ranging from national and industry wide studies down to the within farm scale The potential problems of this approach are also discussed along with practical methods of resolving these problems Agricultural

applications using alternate optimization techniques gradient and direct search methods simulated annealing and quenching and the tabu search strategy are also listed and discussed The particular problems and methodologies of these algorithms including advantageous features that may benefit a hybrid approach or be usefully incorporated into evolutionary algorithms are outlined From consideration of this and the published examples it is concluded that evolutionary algorithms are the superior method for the practical optimization of models of agricultural and natural systems General recommendations on robust options and parameter settings for evolutionary algorithms are given for use in future studies Evolutionary Algorithms and Agricultural Systems will prove useful to practitioners and researchers applying these methods to the optimization of agricultural or natural systems and would also be suited as a text for systems management applied modeling or operations research
