Nonlinear Dynamics And Heterogenous Interacting Agents:

Nonlinear Dynamics and Heterogeneous Interacting Agents Thomas Lux, Stefan Reitz, Eleni Samanidou, 2009-09-02 Economic application of nonlinear dynamics microscopic agent based modelling and the use of artificial intelligence techniques as learning devices of boundedly rational actors are among the most exciting interdisciplinary ventures of economic theory over the past decade This volume provides us with a most fascinating series of examples on complexity in action exemplifying the scope and explanatory power of these innovative approaches *Nonlinear Dynamics and Heterogeneous Interacting Agents* Thomas Lux, Stefan Reitz, Eleni Samanidou, 2005-02-11 Economic application of nonlinear dynamics microscopic agent based modelling and the use of artificial intelligence techniques as learning devices of boundedly rational actors are among the most exciting interdisciplinary ventures of economic theory over the past decade This volume provides us with a most fascinating series of examples on complexity in action exemplifying the scope and explanatory power of these innovative approaches *Nonlinear Dynamics and Heterogeneous Interacting Agents* Thomas Lux, Stefan Reitz, Eleni Samanidou, 2006-06-06 Economic application of nonlinear dynamics microscopic agent based modelling and the use of artificial intelligence techniques as learning devices of boundedly rational actors are among the most exciting interdisciplinary ventures of economic theory over the past decade This volume provides us with a most fascinating series of examples on complexity in action exemplifying the scope and explanatory power of these innovative approaches **Equity and Efficiency Considerations of Public Higher Education** Salvatore Barbaro, 2005-12-16 It has become part of the conventional wisdom in the economics of education that subsidies to higher education have a regressive distributional effect Given that relatively more children from wealthier families enroll in higher education many economist assume that these subsidies to higher education have an unwanted distributional impact This volume presents new empirical evidence for the cross sectional point of view and provides an analytical framework for the longitudinal perspective The present volume also analyzes the equity and efficiency effects of widely discussed funding reforms and proposes a voluntary graduate tax *Term Structure Modeling and Estimation in a State Space Framework* Wolfgang Lemke, 2005-12-08 This book has been prepared during my work as a research assistant at the Institute for Statistics and Econometrics of the Economics Department at the University of Bielefeld Germany It was accepted as a Ph D thesis titled Term Structure Modeling and Estimation in a State Space Framework at the Department of Economics of the University of Bielefeld in November 2004 It is a pleasure for me to thank all those people who have been helpful in one way or another during the completion of this work First of all I would like to express my gratitude to my advisor Professor Joachim Frohn not only for his guidance and advice throughout the completion of my thesis but also for letting me have four very enjoyable years teaching and researching at the Institute for Statistics and Econometrics I am also grateful to my second advisor Professor Willi Semmler The project I worked on in one of his seminars in 1999 can really be seen as a starting point for my research

on state space models I thank Professor Thomas Braun for joining the committee for my oral examination

Computer-aided Systems in Public Transport Mark Hickman, Pitu Mirchandani, Stefan Voß, 2008-01-23 This volume consists of selected papers presented at the Ninth International Conference on Computer Aided Scheduling of Public Transport Coverage includes the use of computer aided methods and operations research techniques to improve information management network and route planning vehicle and crew scheduling and rostering vehicle monitoring and management and practical experience with scheduling and public transport planning methods **Index and Stability in Bimatrix**

Games H. Arndt von Schemde, 2005-12-11 The index of an equilibrium in a game gives information about the stability of the equilibrium for example with respect to game dynamics Unfortunately index theory is often very technical This book presents a new geometric construction that visualises the index in an intuitive way For example a $3 \times n$ game for any n can be represented by a figure in the plane from which one can read off any equilibrium and its index as a geometric orientation With this insight the index can be characterised in strategic terms alone Moreover certain hyperstable equilibrium components are seen to have nonzero index The construction gives an elementary proof that two player games have a Nash equilibrium and in an unusual direction the powerful fixed point theorem of Brouwer

Strategic Trading in Illiquid Markets Burkart Mönch, 2006-01-13 The Area of Research and the Object of Investigation In this thesis we will investigate trading strategies in illiquid markets from a market microstructure perspective Market microstructure is the academic term for the branch of financial economics that investigates trading and the organization of security markets see e g Harris 2002 Historically exchanges evolved as a location where those interested in buying or selling securities could meet physically to transact Thus traditionally security trading was organized on exchange floors where so called dealers arranged all trades and provided liquidity by quoting prices at which they were willing buy or sell Consequently the initial surge of the market microstructure literature focused predominantly on this type of market design which is often referred to as quote driven Nowadays the interest is shifting towards order driven markets Beginning with the Toronto Stock Exchange in the mid 1970s and increasing in frequency and scope this market structure has emerged as the preeminent form of security trading worldwide In order driven markets exchanges arrange trades by matching public orders often by employing automatic execution systems Introduction A major difference between a quote driven and an order driven market arises from the transparency pre and post trade The pre trade transparency concerns the question whether the order book is visible to the keeper only or whether it is open to the public **Consumption Structure and Macroeconomics** Reto Foellmi, 2006-03-30

This book offers a novel perspective that allows to incorporate changing consumption and production structure into models of economic growth Starting from the empirical observation that income and consumption structure are closely related it develops a tractable theoretical framework which enables to analyze macroeconomic models consistent with these empirical facts As a result central macroeconomic phenomena are better understood the reasons behind long run growth structural

change and the influence of inequality on innovations and growth *Risk-Averse Capacity Control in Revenue Management* Christiane Barz,2007-08-02 This book revises the well known capacity control problem in revenue management from the perspective of a risk averse decision maker Modelling an expected utility maximizing decision maker the problem is formulated as a risk sensitive Markov decision process Special emphasis is put on the existence of structured optimal policies Numerical examples illustrate the results *Manipulations in Prediction Markets* Jan Schröder,2009 Fraud and manipulation in prediction markets are systematic results of incentive incompatibility which if present have to be detected and balanced Manipulations in Prediction Markets gives a critical insight into manipulations that are most likely to occur in prediction markets In a general approach the book discusses the issue of incentives in markets and the breakdown of the incentive system On this basis a new way of detecting irregular trading behaviour is introduced **Nonlinearity, Bounded Rationality, and Heterogeneity** Tamotsu Onozaki,2018-01-28 This book pursues a nonlinear approach in considering both chaotic dynamical models and agent based simulation models of economics as well as their dynamical behaviors Three key concepts arising in this context are nonlinearity bounded rationality and heterogeneity which also make up the title of the book Nonlinearity is the warp that runs throughout all models because systems that exhibit chaotic or other complex behavior in the absence of any exogenous disturbances are absolutely nonlinear Bounded rationality constitutes the woof because economic systems do not exhibit complex behavior if all agents are perfectly rational as is usually assumed in neoclassical economics Agents who are boundedly rational have to struggle to do their best with limited information and tend to adapt to their economic environment without knowing what is the best Furthermore the heterogeneity of firms or consumers dyes the fabric of complex dynamics woven from the warp and woof Preferences and Decisions Salvatore Greco,Ricardo Alberto Marques Pereira,Massimo Squillante,Ronald R. Yager,2010-10-05 Decision making is an omnipresent most crucial activity of the human being and also of virtually all artificial broadly perceived intelligent systems that try to mimic human behavior reasoning and choice processes It is quite obvious that such a relevance of decision making had triggered vast research effort on its very essence and attempts to develop tools and techniques which would make it possible to somehow mimic human decision making related acts even to automate decision making processes that had been so far reserved for the human beings The roots of those attempts at a scientific analysis can be traced to the ancient times but clearly they have gained momentum in the recent 50 or 100 years following a general boom in science Depending on the field of science decision making can be viewed in different ways The most general view can be that decision making boils down to some cognitive mental processes that lead to the selection of an option or a course of action among several alternatives Then looking in a deeper way from a psychological perspective this process proceeds in the context of a set of needs preferences rational choice of an individual a group of individuals or even an organization From a cognitive perspective the decision making process proceeds in the context of various interactions with the environment *Behavioral Rationality and*

Heterogeneous Expectations in Complex Economic Systems Cars Hommes, 2013-01-24 Recognising that the economy is a complex system with boundedly rational interacting agents applies complexity modelling to economics and finance

Handbook of Computational Economics Leigh Tesfatsion, Kenneth L. Judd, 2006-05-15 The explosive growth in computational power over the past several decades offers new tools and opportunities for economists This handbook volume surveys recent research on Agent based Computational Economics ACE the computational study of economic processes modeled as dynamic systems of interacting agents Empirical referents for agents in ACE models can range from individuals or social groups with learning capabilities to physical world features with no cognitive function Topics covered include learning empirical validation network economics social dynamics financial markets innovation and technological change organizations market design automated markets and trading agents political economy social ecological systems computational laboratory development and general methodological issues Every volume contains contributions from leading researchers Each Handbook presents an accurate self contained survey of a particular topic The series provides comprehensive and accessible surveys

Vector Optimization Guang-ya Chen, Xuexiang Huang, Xiaogi Yang, 2005-07-13 This book is devoted to vector or multiple criteria approaches in optimization Topics covered include vector optimization vector variational inequalities vector variational principles vector minmax inequalities and vector equilibrium problems In particular problems with variable ordering relations and set valued mappings are treated The nonlinear scalarization method is extensively used throughout the book to deal with various vector related problems The results presented are original and should be interesting to researchers and graduates in applied mathematics and operations research Readers will benefit from new methods and ideas for handling multiple criteria decision problems

Agent-Based Modeling Norman Ehrentreich, 2007-10-25 This book reconciles the existence of technical trading with the Efficient Market Hypothesis By analyzing a well known agent based model the Santa Fe Institute Artificial Stock Market SFI ASM it finds that when selective forces are weak financial evolution cannot guarantee that only the fittest trading rules will survive Its main contribution lies in the application of standard results from population genetics which have widely been neglected in the agent based community

Interactive Macroeconomics Corrado Di Guilmi, Mauro Gallegati, Simone Landini, 2017-04-04 One of the major problems of macroeconomic theory is the way in which the people exchange goods in decentralized market economies There are major disagreements among macroeconomists regarding tools to influence required outcomes Since the mainstream efficient market theory fails to provide an internal coherent framework there is a need for an alternative theory The book provides an innovative approach for the analysis of agent based models populated by the heterogeneous and interacting agents in the field of financial fragility The text is divided in two parts the first presents analytical developments of stochastic aggregation and macro dynamics inference methods The second part introduces macroeconomic models of financial fragility for complex systems populated by heterogeneous and interacting agents The concepts of financial fragility and

macroeconomic dynamics are explained in detail in separate chapters The statistical physics approach is applied to explain theories of macroeconomic modelling and inference

Transdisciplinarity Nima Rezaei, 2022-11-13 This contributed volume book aims at discussing transdisciplinary approaches to address common problems By working transdisciplinarily researchers coming from different disciplines can work jointly using a shared conceptual framework bringing together disciplinary specific theories and concepts There are numerous barriers that can obstruct effective communication between different cultures communities religions and geographies This book shows that through bringing together different disciplines researchers not only can surpass these barriers but can effectively produce new venues of thought that can positively affect the development and evolution of research and education The book discusses new and emerging applications of knowledge produced by transdisciplinary efforts and covers the interplay of many disciplines including agriculture economics mathematics engineering industry information technology marketing nanoscience neuroscience space exploration human animal relationships among others Consequently it also covers the relationship between art and science as one of the most remarkable transdisciplinary approaches that paves the way for new methods in engineering design architecture and many other fields
