Nonlinear Functional Analysis:

Topics in Nonlinear Functional Analysis Djairo Guedes de Figueiredo, 1967 **Linear and Nonlinear Functional Analysis with Applications** Philippe G. Ciarlet, 2013-10-10 This single volume textbook covers the fundamentals of linear and nonlinear functional analysis illustrating most of the basic theorems with numerous applications to linear and nonlinear partial differential equations and to selected topics from numerical analysis and optimization theory This book has pedagogical appeal because it features self contained and complete proofs of most of the theorems some of which are not always easy to locate in the literature or are difficult to reconstitute It also offers 401 problems and 52 figures plus historical notes and many original references that provide an idea of the genesis of the important results and it covers most of the core topics from functional analysis *Nonlinear Functional Analysis and Its Applications* E. Zeidler, 1989-12-11 This is the second of a five volume exposition of the main principles of nonlinear functional analysis and its applications to the natural sciences economics and numerical analysis The presentation is self contained and accessible to the nonspecialist Part II concerns the theory of monotone operators It is divided into two subvolumes II A and II B which form a unit The present Part II A is devoted to linear monotone operators It serves as an elementary introduction to the modern functional analytic treatment of variational problems integral equations and partial differential equations of elliptic parabolic and hyperbolic type This book also represents an introduction to numerical functional analysis with applications to the Ritz method along with the method of finite elements the Galerkin methods and the difference method Many exercises complement the text The theory of monotone operators is closely related to Hilbert's rigorous justification of the Dirichlet principle and to the 19th and 20th problems of Hilbert which he formulated in his famous Paris lecture in 1900 and which strongly influenced the development of analysis in the twentieth century **Geometric Nonlinear Functional Analysis** Yoav Benyamini, Joram Lindenstrauss, 1998 This book presents a systematic and unified study of geometric nonlinear functional analysis This area has its classical roots in the beginning of the twentieth century and is now a very active research area having close connections to geometric measure theory probability classical analysis combinatorics and Banach space theory The main theme of the book is the study of uniformly continuous and Lipschitz functions between Banach spaces e.g. differentiability stability approximation existence of extensions fixed points etc This study leads naturally also to the classification of Banach spaces and of their important subsets mainly spheres in the uniform and Lipschitz categories Many recent rather deep theorems and delicate examples are included with complete and detailed proofs Challenging open problems are described and explained and promising new research directions are indicated Nonlinear Functional Analysis Klaus Deimling, 2010-05-20 This text offers a survey of the main ideas concepts and methods that constitute nonlinear functional analysis It features extensive commentary many examples and interesting challenging exercises 1985 edition **Nonlinear Functional Analysis and Its Applications** Eberhard Zeidler, 1985 **Applied Nonlinear Functional Analysis** Nikolaos

S. Papageorgiou, Patrick Winkert, 2018-08-06 The aim of this book is to provide a concise but complete introduction to the main mathematical tools of nonlinear functional analysis which are also used in the study of concrete problems in economics engineering and physics This volume gathers the mathematical background needed in order to conduct research or to deal with theoretical problems and applications using the tools of nonlinear functional analysis Contents Basic Topology Measure Theory Basic Functional Analysis Banach Spaces of Functions and Measures Convex Functions Nonsmooth Analysis Nonlinear Analysis *Nonlinear Functional Analysis and Its Applications* Felix E. Browder, 1986 **Nonlinear Functional Analysis: A First Course** S. Kesavan, 2022-06-04 The book discusses the basic theory of topological and variational methods used in solving nonlinear equations involving mappings between normed linear spaces It is meant to be a primer of nonlinear analysis and is designed to be used as a text or reference book by graduate students Frechet derivative Brouwer fixed point theorem Borsuk's theorem and bifurcation theory along with their applications have been discussed Several solved examples and exercises have been carefully selected and included in the present edition The prerequisite for following this book is the basic knowledge of functional analysis and topology *Navier-Stokes Equations and Nonlinear Functional Analysis* Roger Temam, 1995-01-01 This second edition like the first attempts to arrive as simply as possible at some central problems in the Navier Stokes equations in the following areas existence uniqueness and regularity of solutions in space dimensions two and three large time behavior of solutions and attractors and numerical analysis of the Navier Stokes equations Since publication of the first edition of these lectures in 1983 there has been extensive research in the area of inertial manifolds for Navier Stokes equations These developments are addressed in a new section devoted entirely to inertial manifolds Inertial manifolds were first introduced under this name in 1985 and since then have been systematically studied for partial differential equations of the Navier Stokes type Inertial manifolds are a global version of central manifolds When they exist they encompass the complete dynamics of a system reducing the dynamics of an infinite system to that of a smooth finite dimensional one called the inertial system Although the theory of inertial manifolds for Navier Stokes equations is not complete at this time there is already a very interesting and significant set of results which deserves to be known in the hope that it will stimulate further research in this area These results are reported in this edition *Non-linear functional analysis* Jacobo T. Schwartz, 1969 **Nonlinear Functional Analysis and Its Applications** Radu Precup, 2021-04-14 This book consists of nine papers covering a number of basic ideas concepts and methods of nonlinear analysis as well as some current research problems Thus the reader is introduced to the fascinating theory around Brouwer's fixed point theorem to Granas theory of topological transversality and to some advanced techniques of critical point theory and fixed point theory Other topics include discontinuous differential equations new results of metric fixed point theory robust tracker design problems for various classes of nonlinear systems and periodic solutions in computer virus propagation models **Lectures In Nonlinear Functional Analysis: Synopsis Of Lectures Given At The Faculty Of Physics Of Lomonosov Moscow State**

University Maxim Olegovich Korpusov, Alexey V Ovchinnikov, Alexander Anatolyevich Panin, 2021-12-28 This book is a systematic presentation of basic notions facts and ideas of nonlinear functional analysis and their applications to nonlinear partial differential equations It begins from a brief introduction to linear functional analysis including various types of convergence and functional spaces The main part of the book is devoted to the theory of nonlinear operators Various methods of the study of nonlinear differential equations based on the facts of nonlinear analysis are presented in detail This book may serve as an introductory textbook for students and undergraduates specializing in modern mathematical physics

Nonlinear Functional Analysis and Its Applications S.P. Singh, 2012-12-06 A NATO Advanced Study Institute on Nonlinear Functional Analysis and Its Applications was held in Hotel Villa del Mare Maratea Italy during April 22 May 3 1985 This volume consists of the Proceedings of the Institute These Proceedings include the invited lectures and contributed papers given during the Institute The papers have been refereed The aim of these lectures was to bring together recent and up to date development of the subject and to give directions for future research The main topics covered include degree and generalized degree theory results related to Hamiltonian Systems Fixed Point theory linear and nonlinear Differential and Partial Differential Equations Theory of Nielsen Numbers and applications to Dynamical Systems Bifurcation Theory Hamiltonian Systems Minimax Theory Heat Equations Pendulum Equation Nonlinear Boundary Value Problems and Dirichlet and Neumann problems for elliptic equations and the periodic Dirichlet problem for semilinear beam equations I express my sincere thanks to Professors F E Browder R Conti A Do1d D E Edmunds and J Mawhin members of the Advisory Committee
