Nonlinear Phenomena In Chemical Dynamics Proceedings Of An International Conference Bordeaux France September 7-11 1981:

Nonlinear Phenomena in Chemical Dynamics C. Vidal, A. Pacault, 2012-12-06 An international conference titled Nonlinear Phenomena in Chemical Dynamics was held in Bordeaux on September 7-11 1981. The present volume contains the text of lectures and abstracts of posters presented during the meeting. This conference is part of a series of scientific multidisciplinary meetings in which chemistry is involved at various levels. Amongst the most recent ones let us mention Aachen 1979, Bielefeld 1979, New York 1979, Elmau 1981. In addition, this meeting is a direct extension of the first one that took place in Bordeaux in 1978 on the topic Far from equilibrium instabilities and structures, at the conclusions of which we could write of Far from Equilibrium. Springer Series in Synergetics Vol 3. The three key words far from equilibrium, instabilities and structures best illustrate the new concepts which emerge from the description of the dynamics of various systems relevant to many different research areas. The present proceedings show how much these remarks have remained true even though substantial progress has been achieved during the three last years. To get a deeper experimental knowledge of open reacting systems, to model and simulate reaction-diffusion systems, to develop the mathematical theory of dynamical systems, these are the main directions in current investigations. *Nonlinear Phenomena in Chemical Dynamics*, 1981

Non-Equilibrium Dynamics in Chemical Systems C. Vidal, A. Pacault, 2012-12-06. Markedly apart from elementary particle physics, another current has been building up and continuously growing within contemporary physics for several decades and even expanding into many other disciplines, especially chemistry, biology, and quite recently economics. Several reasons account for this, presumably the most important one lies in the fact that whatever the specific problem, model, or material concerned, the same basic mathematical features are always involved. In this way, a general phenomenology has emerged which, unlike thermodynamics, is no longer dependent upon the details or specifics; what largely prevails is the nonlinear character of the underlying dynamics. Perhaps we are witnessing the emergence of a nonlinear physics. In a way similar to the birth of quantum physics in the twenties, a physics which deals with the general behaviour of systems, whatever they are or may be. Over the past fifteen years, chemical systems evolving sufficiently far from equilibrium have proved to be particularly well fitted to experimental research on nonlinear behaviour: oscillation, multistability, birhythmicity, chaotic evolution, spatial self-organization, and hysteresis are displayed by chemical reactions whose number is growing each year. In this volume are collected the lectures, communications, and posters, abstracts presented at an international meeting entitled Non-Equilibrium Dynamics in Chemical Systems, held in Bordeaux, France, September 3-11, 1984. *Nonlinear Phenomena in Mathematical Sciences* Vangipuram Lakshmikantham, 1982.
