Nonlinear Hydrodynamic Modeling: A Mathematical Introduction Hampton N. Shirer, 1987-03-11

Publications Abstracts Environmental Research Laboratories (U.S.), 1987 Annual Report National Severe Storms Laboratory, 1987 *Solving Transcendental Equations* John P. Boyd, 2014-10-23

Transcendental equations arise in every branch of science and engineering While most of these equations are easy to solve some are not and that is where this book serves as the mathematical equivalent of a skydiver's reserve parachute not always needed but indispensable when it is The author's goal is to teach the art of finding the root of a single algebraic equation or a pair of such equations Solving Transcendental Equations is unique in that it is the first book to describe the Chebyshev proxy rootfinder which is the most reliable way to find all zeros of a smooth function on the interval and the very reliable spectrally enhanced Weyl bisection marching triangles method for bivariate rootfinding and it includes three chapters on analytical methods explicit solutions regular perturbation expansions and singular perturbation series including hyperasymptotics unlike other books that give only numerical algorithms for solving algebraic and transcendental equations This book is written for specialists in numerical analysis and will also appeal to mathematicians in general It can be used for introductory and advanced numerical analysis classes and as a reference for engineers and others working with difficult equations **Analele științifice ale**

Universității "Al. I. Cuza" din Iași, 1987 *Earth and Mind II* Kim A. Kastens, Cathryn A. Manduca, 2012 Articles refer to teaching at various different levels from kindergarten to graduate school with sections on teaching geologic time space complex systems and field work Each section includes an introduction a thematic paper and commentaries **Acta Physica**

Polonica, 1987 **Applied Mechanics Reviews**, 1975 **Lecture Notes On Mathematical Theory Of The Boltzmann Equation** Nicola Bellomo, 1995-08-31 This is a collection of four lectures on some mathematical aspects related to the nonlinear Boltzmann equation The following topics are dealt with derivation of kinetic equations qualitative analysis of the initial value problem singular perturbation analysis towards the hydrodynamic limit and computational methods towards the solution of problems in fluid dynamics *Quantitative Dynamic Stratigraphy* Timothy Aureal Cross, 1989 M CREATED

Chinese Journal of Geophysics, 1990 Weakly Nonlocal Solitary Waves and Beyond-All-Orders Asymptotics John P. Boyd, 2012-12-06 if a physical system is capable of supporting solitary wave motions then such motions will invariably arise from quite general excitations T Maxworthy 1980 pg 52 The discover of nonlocal solitary waves is unknown and anonymous but he or she lived in the dry north of Australia many millenia before the birth of writing There on the shores of the Gulf of Carpentaria vast cylinders of cloud roll from northeast to southwest most mornings Perhaps 300 meters in diameter perhaps

500 meters above the ocean these cylinders of cloud stretch from horizon to horizon As the cloud evaporates on the trailing edge of the wave and condenses on the leading edge the cylinder appears to roll backwards even as it propagates inland at perhaps 10 20 meters per second Often a whole train of cloud cylinders propagates from Cape Yorke Peninsula across the Gulf towards the southwest across modern Burketown perhaps as much as 500 km inland into the Northern Territory Modern day Australians call it the Morning Glory What the discover called it so many centuries before the invention of hieroglyphics the foundation of Ur and the coronation of the First Dynasty of China we do not know But unless he was very different from us he felt awe Physicists Smith 1988 and Rottman and Einaudi 1 93 have identified the Morning Glory as a solitary wave

Perspectives of Nonlinear Dynamics: Volume 1 E. Atlee Jackson, 1989 The dynamics of physical chemical biological or fluid systems generally must be described by nonlinear models whose detailed mathematical solutions are not obtainable To understand some aspects of such dynamics various complementary methods and viewpoints are of crucial importance In this book the perspectives generated by analytical topological and computational methods and interplays between them are developed in a variety of contexts This book is a comprehensive introduction to this field suited to a broad readership and reflecting a wide range of applications Some of the concepts considered are topological equivalence embeddings dimensions and fractals Poincar maps and map dynamics empirical computational sciences vis vis mathematics Ulam s synergetics Turing s instability and dissipative structures chaos dynamic entropies Lorenz and Rossler models predator prey and replicator models FPU and KAM phenomena solitons and nonsolitons coupled maps and pattern dynamics cellular automata
