Nonlinear Model Based Process Control:

Nonlinear Model Based Process Control R. Berber, Costas Kravaris, 2012-12-06 The ASI on Nonlinear Model Based Process Control August 10 20 1997 Antalya Turkey convened as a continuation of a previous ASI which was held in August 1994 in Antalya on Methods of Model Based Process Control in a more general context In 1994 the contributions and discussions convincingly showed that industrial process control would increasingly rely on nonlinear model based control systems Therefore the idea for organizing this ASI was motivated by the success of the first one the enthusiasm expressed by the scientific community for continuing contact and the growing incentive for on line control algorithms for nonlinear processes This is due to tighter constraints and constantly changing performance objectives that now force the processes to be operated over a wider range of conditions compared to the past and the fact that many of industrial operations are nonlinear in nature The ASI intended to review in depth and in a global way the state of the art in nonlinear model based control The list of lecturers consisted of 12 eminent scientists leading the principal developments in the area as well as industrial specialists experienced in the application of these techniques Selected out of a large number of applications there was a high quality active audience composed of 59 students from 20 countries Including family members accompanying the participants the group formed a large body of 92 persons Out of the 71 participants 11 were from industry

Nonlinear Model Based Process Control Rıdvan Berber, Costas Kravaris, 1998 The increasingly competitive environment within which modern industry has to work means that processes have to be operated over a wider range of conditions in order to meet constantly changing performance targets Add to this the fact that many industrial operations are nonlinear and the need for on line control algorithms for nonlinear processes becomes clear Major progress has been booked in constrained model based control and important issues of nonlinear process control have been solved This text surveys the state of the art in nonlinear model based control technology by writers who have actually created the scientific profile A broad range of issues are covered in depth from traditional nonlinear approaches to nonlinear model predictive control from nonlinear process identification and state estimation to control integrated design Advances in the control of inverse response and unstable processes are presented Comparisons with linear control are given and case studies are used for illustration

Nonlinear Model-based Process Control Rashid M. Ansari, Moses O. Tade, 2011-12-12 The series Advances in Industrial Control aims to report and encourage technology transfer in control engineering The rapid development of control technology has an impact on all areas of the control discipline New theory new controllers actuators sensors new industrial processes computer methods new applications new philosophies new challenges Much of this development work resides in industrial reports feasibility study papers and the reports of advanced collaborative projects The series offers an opportunity for researchers to present an extended exposition of such new work in all aspects of industrial control for wider and rapid dissemination The last decade has seen considerable interest in reviving the fortunes of non linear control In contrast to the approaches of the

60S 70S and 80S a very pragmatic agenda for non linear control is being pursued using the model based predictive control paradigm This text by R Ansari and M Tade gives an excellent synthesis of this new direction Two strengths emphasized by the text are i four applications found in refinery processes are used to give the text a firm practical continuity ii a non linear model based control architecture is used to give the method a coherent theoretical framework **Nonlinear Model-based Process Control** Rashid M.
