Nonlinear Second Order Elliptic Equations Involving Measures Moshe Marcus,Laurent Véron,2013-11-27 In the last 40 years semi linear elliptic equations became a central subject of study in the theory of nonlinear partial differential equations On the one hand the interest in this area is of a theoretical nature due to its deep relations to other branches of mathematics especially linear and nonlinear harmonic analysis dynamical systems differential geometry and probability On the other hand this study is of interest because of its applications Equations of this type come up in various areas such as problems of physics and astrophysics curvature problems in Riemannian geometry logistic problems related for instance to population models and most importantly the study of branching processes and superdiffusions in the theory of probability The aim of this book is to present a comprehensive study of boundary value problems for linear and semi linear second order elliptic equations with measure data We are particularly interested in semi linear equations with absorption The interactions between the diffusion operator and the absorption term give rise to a large class of nonlinear phenomena in the study of which singularities and boundary trace play a central role This book is accessible to graduate students and researchers with a background in real analysis and partial differential equations

that appear in the study of nonlinear partial differential equations

Nonlinear Partial Differential Equations with Applications Tomás Roubicek, 2005-09-16 This book primarily concerns quasilinear and semilinear elliptic and parabolic partial differential equations inequalities and systems The exposition quickly leads general theory to analysis of concrete equations which have specific applications in such areas as electrically semi conductive media modeling of biological systems and mechanical engineering Methods of Galerkin or of Rothe are exposed in a large generality

Nonlinear Partial Differential Equations and Free Boundaries: Elliptic equations J. I. Díaz, 1985 In this Research Note the author brings together the body of known work and presents many recent results relating to nonlinear partial differential equations that give rise to a free boundary usually the boundary of the set where the solution vanishes identically The formation of such a boundary depends on an adequate balance between two of the terms of the equation that represent the particular characteristics of the phenomenon under consideration diffusion absorption convection evolution etc These balances do not occur in the case of a linear equation or an arbitrary nonlinear equation Their characterization is studied for several classes of nonlinear equations relating to applications such as chemical reactions non Newtonian fluids flow through porous media and biological populations In this first volume the free boundary for nonlinear elliptic equations is discussed A second volume dealing with parabolic and hyperbolic equations is in preparation

Implicit Partial Differential Equations Bernard Dacorogna, Paolo Marcellini, 1999-08-01 Nonlinear partial differential equations has become one of the main tools of modern mathematical analysis in spite of seemingly contradictory terminology the subject of nonlinear differential equations finds its origins in the theory of linear differential equations and a large part of functional analysis derived its inspiration from the study of linear pdes In recent years several mathematicians have investigated nonlinear equations particularly those of the second order both linear and nonlinear and either in divergence or nondivergence form Quasilinear and fully nonlinear differential equations are relevant classes of such equations and have been widely examined in the mathematical literature In this work we present a new family of differential equations called implicit partial differential equations described in detail in the introduction c f Chapter 1 It is a class of nonlinear equations that does not include the family of fully nonlinear elliptic pdes We present a new functional analytic method based on the Baire category theorem for handling the existence of almost everywhere solutions of these implicit equations The results have been obtained for the most part in recent years and have important applications to the calculus of variations nonlinear elasticity problems of phase transitions and optimal design some results have not been published elsewhere

Partial Differential Equations in China Chaohao Gu, Xiayi Ding, Chung-Chun Yang, 2012-12-06 In the past few years there has been a fruitful exchange of expertise on the subject of partial differential equations PDEs between mathematicians from the People's Republic of China and the rest of the world The goal of this collection of papers is to summarize and introduce the historical progress of the development of PDEs in China from the 1950s to the 1980s The results presented here were mainly published before the 1980s but having been printed in the Chinese language have not reached the wider audience they deserve Topics covered include among others nonlinear hyperbolic equations nonlinear elliptic equations nonlinear parabolic equations mixed equations free boundary problems minimal surfaces in Riemannian manifolds microlocal analysis and solitons For mathematicians and physicists interested in the historical development of PDEs in the People's Republic of China Non-Linear Partial Differential Equations E.E. Rosinger, 1990-11-22 A massive transition of interest from solving linear partial differential equations to solving nonlinear ones has taken place during the last two or three decades The availability of better computers has often made numerical experimentations progress faster than the theoretical understanding of nonlinear partial differential equations The three most important nonlinear phenomena observed so far both experimentally and numerically and studied theoretically in connection with such equations have been the solitons shock waves and turbulence or chaotical processes In many ways these phenomena have presented increasing difficulties in the mentioned order In particular the latter two phenomena necessarily lead to nonclassical or generalized solutions for
