## **Nonlinear Signal Processing A Statistical Approach:**

Nonlinear Signal Processing Gonzalo R. Arce, 2004-12-20 Nonlinear Signal Processing A Statistical Approach focuses on unifying the study of a broad and important class of nonlinear signal processing algorithms which emerge from statistical estimation principles and where the underlying signals are non Gaussian rather than Gaussian processes Notably by concentrating on just two non Gaussian models a large set of tools is developed that encompass a large portion of the nonlinear signal processing tools proposed in the literature over the past several decades Key features include Numerous problems at the end of each chapter to aid development and understanding Examples and case studies provided throughout the book in a wide range of applications bring the text to life and place the theory into context A set of 60 MATLAB software m files allowing the reader to quickly design and apply any of the nonlinear signal processing algorithms described in the book to an application of interest is available on the accompanying FTP site

**Bayesian Signal Processing** James V. Candy, 2011-09-20 New Bayesian approach helps you solve tough problems in signal processing with ease Signal processing is based on this fundamental concept the extraction of critical information from noisy uncertain data Most techniques rely on underlying Gaussian assumptions for a solution but what happens when these assumptions are erroneous Bayesian techniques circumvent this limitation by offering a completely different approach that can easily incorporate non Gaussian and nonlinear processes along with all of the usual methods currently available This text enables readers to fully exploit the many advantages of the Bayesian approach to model based signal processing It clearly demonstrates the features of this powerful approach compared to the pure statistical methods found in other texts Readers will discover how easily and effectively the Bayesian approach coupled with the hierarchy of physics based models developed throughout can be applied to signal processing problems that previously seemed unsolvable Bayesian Signal Processing features the latest generation of processors particle filters that have been enabled by the advent of high speed high throughput computers The Bayesian approach is uniformly developed in this book s algorithms examples applications and case studies Throughout this book the emphasis is on nonlinear non Gaussian problems however some classical techniques e g Kalman filters unscented Kalman filters Gaussian sums grid based filters et al are included to enable readers familiar with those methods to draw parallels between the two approaches Special features include Unified Bayesian treatment starting from the basics Bayes s rule to the more advanced Monte Carlo sampling evolving to the next generation techniques sequential Monte Carlo sampling Incorporates classical Kalman filtering for linear linearized and nonlinear systems modern unscented Kalman filters and the next generation Bayesian particle filters Examples illustrate how theory can be applied directly to a variety of processing problems Case studies demonstrate how the Bayesian approach solves real world problems in practice MATLAB notes at the end of each chapter help readers solve complex problems using readily available software commands and point out software packages available Problem sets test readers knowledge and help them put their new skills into practice The basic Bayesian approach is emphasized throughout this text in order to enable the processor to rethink the approach to formulating and solving signal processing problems from the Bayesian perspective This text brings readers from the classical methods of model based signal processing to the next generation of processors that will clearly dominate the future of signal processing for years to come With its many illustrations demonstrating the applicability of the Bayesian approach to real world problems in signal processing this text is essential for all students scientists and engineers who investigate and apply signal processing to their everyday problems
