**Statistical Concepts - A Second Course** Debbie L. Hahs-Vaughn, Richard G. Lomax, 2020-01-17

Statistical Concepts: A Second Course presents the last 10 chapters from An Introduction to Statistical Concepts, Fourth Edition. Designed for second and upper level statistics courses, this book highlights how statistics work and how best to utilize them to aid students in the analysis of their own data and the interpretation of research results. In this new edition, Hahs-Vaughn and Lomax discuss sensitivity, specificity, false positive, and false negative errors. Coverage of effect sizes has been expanded upon, and more organizational features to summarize key concepts have been included. A final chapter on mediation and moderation has been added for a more complete presentation of regression models. In addition to instructions and screen shots for using SPSS, new to this edition is an annotated script for using R. This book acts as a clear and accessible instructional tool to help readers fully understand statistical concepts and how to apply them to data. It is an invaluable resource for students undertaking a course in statistics in any number of social science and behavioral science disciplines.

**Advanced and Multivariate Statistical Methods for Social Science Research** Soleman H. Abu-Bader, 2010-06

Unlike other advanced statistical texts, this book combines the theory and practice behind a number of statistical techniques which students of the social sciences need to evaluate, analyze, and test their research hypotheses. Each chapter discusses the purpose, rationale, and assumptions for using each statistical test rather than focusing on the memorization of formulas. The tests are further elucidated throughout the text by real examples of analysis. Of particular value to students is the book's detailed discussion of how to utilize SPSS to run each test, read its output, interpret, and write the results. Advanced Multivariate Statistical Methods for Social Science Research is an indispensable resource for students of disciplines as varied as social work, nursing, public health, psychology, and education. *The Measurement of Association* Kenneth J. Berry,Janis E. Johnston,Paul W. Mielke, Jr.,2018-11-02 This research monograph utilizes exact and Monte Carlo permutation statistical methods to generate probability values and measures of effect size for a variety of measures of association Association is broadly defined to include measures of correlation for two interval level variables measures of association for two nominal level variables or two ordinal level variables and measures of agreement for two nominal level or two ordinal level variables Additionally measures of association for mixtures of the three levels of measurement are considered nominal ordinal nominal interval and ordinal interval measures Numerous comparisons of permutation and classical statistical methods are presented Unlike classical statistical methods permutation statistical methods do not rely on theoretical distributions avoid the usual assumptions of normality and homogeneity of variance and depend only on the data at hand This book takes a unique approach to explaining statistics by integrating a large variety of statistical methods and establishing the rigor of a topic that to many may seem to be a nascent field This topic is relatively new in that it took modern computing power to make permutation methods available to those working in mainstream research Written for a statistically informed audience it is particularly useful for teachers of statistics practicing statisticians applied statisticians and quantitative graduate students in fields such as psychology medical research epidemiology public health and biology It can also serve as a textbook in graduate courses in subjects like statistics psychology and biology

Designing of research programme, selection of variables, collection of data and their analysis to interpret the data are discussed extensively. Statistical tools are complemented with real life examples making the otherwise complicated subject like statistics seem simpler. Attempts have been made to demonstrate how a user can solve the problems using simple computer oriented programme. Emphasis is placed not only on solving the problems in various fields but also on drawing inferences from the problems. The importance of instruments and computers in research processes and statistical analyses along with their misuse, incorrect use is also discussed to make the user aware about the correct use of specific technique. In all the chapters theories are combined with examples and steps are enumerated to follow the correct use of the available packages like MSEXCELL, SPSS, SPAR1, SAS etc. Utmost care has been taken to present varied range of research problems along with their solutions in agriculture and allied fields which would be of immense use to readers.
