Speciation and Biogeography of Birds Ian Newton, 2003-02-25 This book should be of value to anyone interested in bird evolution and taxonomy biogeography distributional history dispersal and migration patterns It provides an up to date synthesis of current knowledge on species formation and the factors influencing current distribution patterns It draws heavily on new information on Earth history including past glacial and other climatic changes on new developments in molecular biology and palaeontology and on recent studies of bird distribution and migration patterns to produce a coherent account of the factors that have influenced bird species diversity and distribution patterns worldwide Received the Best Bird Book of the Year award for 2004 from British Birds magazine Winner of the British Birds British Trust for Ornithology Bird Book of the Year 2004 The first book to deal comprehensively with bird speciation and biogeography Up to date synthesis of new information Clearly written No previous book covers the same ground Many maps and diagrams Makes difficult and widely scattered information accessible and easily understood A sound base for future research Takes full account of recent developments in molecular biology

Pleistocene Birds of the Palearctic Tommy Tyrberg, 1998 *Quaternary Extinctions* Paul S. Martin, Richard G. Klein, 2022-01-04 What caused the extinction of so many animals at or near the end of the Pleistocene Was it overkill by human hunters the result of a major climatic change or was it just a part of some massive evolutionary turnover Questions such as these have plagued scientists for over one hundred years and are still being heatedly debated today Quaternary Extinctions presents the latest and most comprehensive examination of these questions Geological Magazine May be regarded as a kind of standard encyclopedia for Pleistocene vertebrate paleontology for years to come American Scientist Should be read by paleobiologists biologists wildlife managers ecologists archeologists and anyone

concerned about the ongoing extinction of plants and animals Science Uncommonly readable and varied for watchers of paleontology and the rise of humankind Scientific American Represents a quantum leap in our knowledge of Pleistocene and Holocene palaeobiology Many volumes on our bookshelves are destined to gather dust rather than attention But not this one Nature Two strong impressions prevail when first looking into this epic compendium One is the judicious balance of views that range over the whole continuum between monocausal cultural or environmental explanations The second is that both the data base and theoretical sophistication of the protagonists in the debate have improved by a quantum leap since 1967

American Anthropologist **Systematics and Taxonomy of Australian Birds** Les Christidis, Walter Boles, 2008 Lists all those species of birds that have been recorded from the Australian mainland Tasmania island territories and surrounding waters Based on the authors original book The Taxonomy and Species of Birds of Australia and its Territories it includes any new species for which records have been accepted by the Records Appraisal Committee of Birds Australia It also includes all extant and recently extinct post 1800 native species as well as new species accepted vagrants and introduced species that have become established and continue to survive in the wild

The Great American Biotic Interchange Francis G. Stehli, S. David Webb, 2013-03-09 Two rather different elements combine to explain the origin of this volume one scientific and one personal The broader of the two is the scientific basis the time for such a volume had arrived Geology had made remarkable progress toward an understanding of the physical history of the Caribbean Basin for the last 100 million years or so On the biological side many new discoveries had elucidated the distributional history of terrestrial organisms in and between the two Americas Geological and biological data had been combined to yield the timing of important events with unprecedented resolution Clearly when each of two broad disciplines is making notable advances and when each provides new insights for the other the rewards of cross disciplinary contacts increase exponentially The present volume represents an attempt to bring together a group of geologists paleontologists and biologists capable of exploiting this opportunity through presentation of an interdisciplinary synthesis of evidence and hypothesis concerning interamerican connections during the Cretaceous and Cenozoic Advances in plate tectonics form the basis for a modern synthesis and in the broadest terms dictate the framework within which the past and present distributions of organisms must be interpreted Any scientific discipline must seek tests of its conclusions from data outside of its own confines

Avian Biology Donald Farner, 2012-12-02 *Avian Biology* Volume VIII assesses selected aspects of avian biology It is generally the conceptual descendant of Marshall's earlier treatise *Biology and Comparative Physiology of Birds* but is more than simply a revision of it This volume consists of two relatively lengthy diverse chapters that focus on adaptive significance of coloniality in birds and fossil records of birds In particular this volume looks into group phenomena related to central place systems that is systems in which one or more individuals move to and from a centrally located place in the course of daily activities It also addresses selective factors that have been suggested to explain why individuals should form colonies rather than disperse within the available foraging space

This book will be useful as a reference material for advanced students and instructors in this field of interest From Foraging to Farming in the Andes Tom D. Dillehay, 2011-02-14 Archeologists have always considered the beginnings of Andean civilization from c 13 000 to 6 000 years ago to be important in terms of the appearance of domesticated plants and animals social differentiation and a sedentary lifestyle but there is more to this period than just these developments During this period the spread of crop production and other technologies kinship based labor projects mound building and population aggregation formed ever changing conditions across the Andes From Foraging to Farming in the Andes proposes a new and more complex model for understanding the transition from hunting and gathering to cultivation It argues that such developments evolved regionally were fluid and uneven and were subject to reversal This book develops these arguments from a large body of archaeological evidence collected over 30 years in two valleys in northern Peru and then places the valleys in the context of recent scholarship studying similar developments around the world **Once a River** Amadeo M. Rea, 2021-11-09 Like many rivers of the arid Southwest the Gila is for much of its length a dry bed except after seasonal rains Yet a mere century ago it hosted a thriving biological community and two centuries ago American Indians fished from its banks It is no mystery how the desert swallowed up the Gila Beaver trapping overgrazing and woodcutting first ruined natural watersheds then damming confined the last drops of its surface flow Historical sources and archaeological data inform us of the Gila's past but its bird life further testifies to the changes Amadeo Rea traces the decline of bird life on the Middle Gila in a book that addresses the broader issue of habitat deterioration Bird lovers will find it a storehouse of data on avian migration patterns and on ornithological classification based on skeletal structure Anthropologists can draw on its Piman ethnoclassification of birds which links the Gila River tribe with various other Uto Aztec peoples of Mexico's west coast But for all concerned with protecting our environment Once a River offers evidence of change that might be apprehended elsewhere It is a case history of a loss that perhaps need never have occurred Papers in Avian Paleontology, Honoring Pierce Brodkorb Society of Avian Paleontology and Evolution. Symposium, 1992 *Wildlife Review*, 1979

South American and Antarctic Continental Cenozoic Birds Claudia P. Tambussi, Federico Degrange, 2012-12-25 Modern birds Neornithes are represented by two big lineages the Palaeognathae Tinamiformes Ratitae and the Neognathae Galloanserae Neoaves Metaves Coronoaves Both clades sum approximately 10 000 species of which 60% are Passeriformes the most diverse clade of terrestrial vertebrates A comparison between the past and the present reveals a complex and hallmarked evolutionary and biogeographic history which would have begun over 65 million years ago For South America SA this includes 1 the presence of taxa with uncertain affinities and the absence of Passeriformes during the Paleogene 2 a progressive and accelerated increase of the species starting at the Neogene Miocene 3 important extinct lineages e.g. Phorusrhacidae Teratornithidae that migrate to North America after the rising of the Panamian isthmus 4 groups with major diversification in the Neogene that survives nowadays represented by scarce species endemic of SA Cariamidae or that

inhabits mainly in the southern hemisphere Anhingidae 5 very diverse living groups with scarce e g Passeriformes or none e g Apodiformes fossil record in SA which stem groups are registered in Europe Apparently the changes in diversity of the south American Neornithes have been the result of successive radiation biogeographic connections with North America and in a minor scale some extinctions The opening of the Drake s passage and the occurrence of the circumpolar Antarctic flow are not sufficient causes to explain the highly disparity between the weddellians penguins Sphenisciformes of Antartica and those of the patagonian Atlantic Ocean

Avian Paleontology at the Close of the 20th Century Society of Avian Paleontology and Evolution. Symposium,1999 The 32 papers collected herein reflect the great diversity and interest that the study of fossil birds has generated in recent years The first seven papers Mourer Chauvir et al Worthy and Jouventin Segu and Alcover Steadman and Hilgartner Millener Worthy Pavia relate to late Quaternary birds from islands where human intervention in the last few thousand years has caused many heretofore unrecorded extinctions Three papers on Quaternary avifaunas of continental Europe deal with distributional changes and cultural use of birds by humans in Siberia Potapova and Panteleyev the utility of patterns of seabird distribution in determining former marine climatic conditions Tyrberg and temporal changes in morphology of ptarmigans Lagopus through the late Pleistocene Stewart Three papers deal with late Cenozoic raptors Campbell et al Tambussi and Noriega Emslie and Czaplewski New genera from Paleogene deposits are described by Boles and Ivison Karhu and Peters Five papers deal with ancient waterfowl Alvarenga describes the first fossil screamer Anhimidae from the Oligocene of Brazil Olson provides the first fossil records of the Anseranatidae with the description of a new species from the early Eocene of England which is referred to Anatalavis from the Paleocene Cretaceous of New Jersey Ericson provides the means to distiguish Eocene fossils of the duck like Presbyornis from the flamingo like Juncitarsus and gives new records of the latter Benson shows that the Paleocene Presbyornis isoni once ranged from Maryland to North Dakota and he gives records of other Paleocene birds from North Dakota Hope names a new larger species of Graculavus extending the range of the genus from New Jersey to the Cretaceous of Wyoming The early history and evolution of birds receives great attention Dzerzhinsky expands upon the significance of cranial morphology in paleognathous birds Kurochkin relates the early Cretaceous genus Ambiortus to the Chinese Otogornis which are supposed to be on a line with modern birds as opposed to the Enantiornithes Bochenski uses paleogeography to suggest that the Enantiornithes must antedate Archaeopteryx Zhou and Martin show that the manus of Archaeopteryx is more bird like than previously realized Martin and Stewart use bird teeth to argue against dinosaurian origins for Aves whereas Elzanowski diverges on various aspects of dinosaurian cranial morphology and that of early birds that may have evolutionary significance Witmer Chiappe and Goslow present summaries of three sessions of a roundtable discussion on avian origins early evolution of birds and the origins of flight which was held on June 7 the last day of the meeting and which covered much controversial territory

The Origin and Evolution of Birds Alan Feduccia,Professor Alan Feduccia,1999-01-01 An exploration of all that is known about the

origin of birds and of avian flight It draws on fossil evidence and studies of the structure and biochemistry of living birds to present knowledge and data on avian evolution and to propose a new model of this evolutionary process *Wildlife*

Abstracts ,1976 **Bonebeds** Raymond R. Rogers,David A. Eberth,Anthony R. Fiorillo,2010-02-15 The vertebrate fossil record extends back more than 500 million years and bonebeds localized concentrations of the skeletal remains of vertebrate animals help unlock the secrets of this long history Often spectacularly preserved bonebeds both modern and ancient can reveal more about life histories ecological associations and preservation patterns than any single skeleton or bone For this reason bonebeds are frequently studied by paleobiologists geologists and archeologists seeking to piece together the vertebrate record Thirteen respected researchers combine their experiences in Bonebeds providing readers with workable definitions theoretical frameworks and a compendium of modern techniques in bonebed data collection and analysis By addressing the historical theoretical and practical aspects of bonebed research this edited volume the first of its kind provides the background and methods that students and professionals need to explore and understand these fantastic records of ancient life and death **Smilodon** Lars Werdelin,H.
