Problems of Solar and Stellar Oscillations D.O. Gough, 2012-12-06 D O GOUGH Institute of Astronomy Madingley Road Cambridge U K IAU Colloquium 66 on Problems of Solar and Stellar Oscillations was held at the Crimean Astrophysical Observatory U S S R on 15 September 1981 The principal purpose of the colloquium was to study the low amplitude oscillations of the Sun and to a lesser extent to consider similar oscillations of other stars Much of the emphasis of the discussions was on the diagnostic value of the oscillations In the last few years we have become aware that the frequencies of the five minute modes of high degree which constitute the major component of the oscillations discovered twenty years ago by Evans and Michaud can be used to put quite tight bounds on the stratification of the solar convection zone These permit a calibration of solar models computed from so called standard evolution theory Modes of low degree penetrate beneath the convection zone to the core of the Sun and can in principle test the evolution theory Therefore there was considerable interest in the reports of the latest observations of such modes Broadly speaking those observations confirm the calibration by the high degree modes but there remain some systematic discrepancies that demand some revision of the theory Besides the gross aspects of evolution theory there are also more intricate details to be understood *Stellar Astrophysical Fluid Dynamics* Michael J. Thompson, Jørgen Christensen-Dalsgaard, 2003-05-01 In all phases of the life of a star hydrodynamical processes play a major role This volume gives a comprehensive overview of the state of knowledge in stellar astrophysical fluid dynamics and its publication marked the 60th birthday of Douglas Gough Professor of Theoretical Physics at the University of Cambridge and leading contributor to stellar astrophysical fluid dynamics Topics include properties of pulsating stars helioseismology convection and mixing in stellar interiors dynamics of stellar rotation planet formation and the generation of stellar and planetary magnetic fields Each chapter is written by leading experts in the field and the book provides an overview that is central to any attempt to understand the properties of stars and their evolution With extensive references to the technical literature this is a valuable text for researchers and graduate students in stellar astrophysics **Solar Seismology from Space**, 1984 Physics of the Sun P.A. Sturrock, 2012-12-06 This volume together with its two companion volumes originated in a study commissioned by the United States National Academy of Sciences on behalf of the National Aeronautics and Space Administration A committee composed of Tom Holzer Dimitri Mihalas Roger Ulrich and myself was asked to prepare a comprehensive review of current knowledge concerning the physics of the Sun We were fortunate in being able to persuade many distinguished scientists to gather their forces for the preparation of 21 separate chapters covering not only solar physics but also relevant areas of astrophysics and solar terrestrial relations It proved necessary to divide the chapters into three separate volumes that cover three different aspects of solar physics Volumes II and III are concerned with The Solar Atmosphere and with Astrophysics and Solar Terrestrial Relations This volume is devoted to The Solar Interior except that the volume begins with one chapter reviewing the contents of all three

volumes Our study of the solar interior includes a review of nuclear atomic radiative hydrodynamic and hydromagnetic processes together with reviews of three areas of active current investigation the dynamo mechanism internal rotation and magnetic fields and oscillations The last topic in particular has emerged in recent years as one of the most exciting areas of solar research Physics Briefs ,1987 **The Equation of State in Astrophysics** G. CHABRIER (Ed),Evry L. Schatzman,1994-08-11 A unique review of our understanding of dense ionised matter in astrophysical contexts essential reading for graduate students and researchers Variable Stars as Essential Astrophysical Tools Cafer Ibanogamalu,2012-12-06 Pulsating and eccentric binary stars play a fundamentally important role in deciphering the mass distribution within stars The present volume reviews the fundamental concepts of both radial and nonradial oscillations in the stars including the Sun Helio and astroseismological results are reviewed from the basics to the most recent developments A new theory is presented which seems to explain the mechanism of the light and radial velocity variations of recently discovered Ap stars This textbook covers almost all kinds of variable stars of widely different characteristics It will serve as a reference text for a very long time to come not only for specialists but also for undergraduate students of physics and astronomy 天文学の発展 (Japan),1900 **NASA Conference Publication** ,1981

Schmalder,Gert Zech,2013-11-11 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user I 1980 some older Volume 27 contains literature published in 1980 and received before August literature which was received late and which is not recorded in earlier volumes is also included We acknowledge with thanks contributions to this volume by Dr J Bouska Prague who surveyed journals and publications in Czech and supplied us with abstracts in English **American Journal of Physics** ,1980 **Radial and Nonradial Pulsations as Probes of Stellar Physics** Conny Aerts,T. R. Bedding,Jørgen Christensen-Dalsgaard,2002 Acta Astronomica ,1983 **The Century of Space Science** J.A. Bleeker,Johannes Geiss,M. Huber,2012-12-06 One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field Hence at this point in

history we are in a unique position to gain first hand insight into the field and its development To this end The Century of Space Science a scholarly authoritative reference book presents a chapter by chapter retrospective of space science as studied in the 20th century The level is academic and focuses on key discoveries how these were arrived at their scientific consequences and how these discoveries advanced the thoughts of the key players involved With over 90 world class contributors such as James Van Allen Cornelis de Jager Eugene Parker Reimar L st and Ernst Stuhlinger and with a Foreword by Lodewijk Woltjer past ESO Director General this book will be immensely useful to readers in the fields of space science astronomy and the history of science Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection *Reprint* , **Sendai Astronomiaj Raportoj** ,1982 **Sendai astronomiaj raportoj ...** Sendai-shi (Miyagi-ken, Japan).
