Nonrenewable Resource:

Making Good Choices About Nonrenewable Resources Paula Johanson, 2009-08-15 Helps teens become proactive about nonrenewable resources by presenting facts and tips

Nonrenewable Resources and You Nicholas Faulkner, Paula Johanson, 2018-07-15 The many natural resources we use in daily life such as fossil fuels are not unlimited which readers will discover from this enlightening book They will also learn about the lasting effects of using up Earth's nonrenewable resources and what this means for both the planet and all of us Most importantly however this book shows that there are alternatives to nonrenewable resources such as solar power which the world is trending toward now A thoughtful Myths and Facts section and 10 Great Questions to Ask a Science Teacher will engage readers to be more environmentally aware

Analyzing Nonrenewable Resource Supply Douglas R. Bohi, Michael A. Toman, 2015-09-16 Originally published in 1984 Douglas A Bohi and Michael A Toman have produced a convenient reference source about disparate elements in the theory of nonrenewable resource supply and about general issues that arise when applying dynamic economic analysis The authors emphasise the inherently dynamic nature of resource supply decisions the effects of resource depletion on costs and behaviour and the influence of uncertainty about costs prices and reserves This title will be useful to students interested in environmental studies and economics practitioners and others who need to know more about complex interactions of economic forces and the resource base

An Analysis of Cartelized Market Structures for Nonrenewable Resources Robert A. Marshall, 2017-10-17 Originally published in 1979 While the theory of non renewable resources under competitive and monopolistic market regimes have been relatively well developed almost no attention has been given to the development of a theoretical framework for analysis of the spectrum of mixed market structure between those extremes The world oil market structure is an example of such an intermediate market structure The purpose of this title is to develop such a theoretical framework The study examines non renewable resource markets in which a profit maximizing producer cartel co exists with a non cartel supply sector which is alternately modelled as consisting of a collection of competitive firms or as exhibiting other exogenously assumed supply behaviours This title will be of interest to students of environmental economics

Resource Economics Jon M. Conrad, 1999-10-28 The book covers basic concepts shows how to set up spreadsheets to solve dynamic allocation problems and presents economic models for various industries

Climate Policy and Nonrenewable Resources Karen Pittel, Rick Van Der Ploeg, Cees Withagen, 2014-08-22 A detailed and rigorous analysis of the effect of climate policies on climate change that questions the empirical and theoretical support for the green paradox Recent developments suggest that well intended climate policies including carbon taxes and subsidies for renewable energy might not accomplish what policy makers intend Hans Werner Sinn has described a green paradox arguing that these policies could hasten global warming by encouraging owners of fossil fuel reserves to increase their extraction rates for fear that their reserves will become worthless In this volume economists investigate the empirical and

theoretical support for the green paradox Offering detailed and rigorous analyses of the forces and assumptions driving Sinn's argument the contributors consider whether rising carbon tax rates inevitably speed up climate change the effects of the design of resource markets the availability of clean substitutes and the development of new technologies and the empirical evidence or lack thereof for the green paradox result They consider extraction costs sustainability and innovation timing announcement effects and time consistency in relation to policy measures and empirical results for the green paradox phenomena under several alternative policy measures Contributors Julien Daubanes Corrado Di Maria Carolyn Fischer Florian Habermacher Michael Hoel Darko Jus Gebhard Kirchgassner Ian Lange Pierre Lasserre Volker Meier Karen Pittel Stephen Salant Frank Stähler Gerard van der Meijden Frederick van der Ploeg Edwin van der Werf Ngo Van Long Ralph A Winter Cees Withagen

Project Scheduling with Time Windows and Scarce Resources Klaus Neumann, Christoph Schwindt, Jürgen Zimmermann, 2013-06-29 A project is a unique undertaking or endeavor to be accomplished that can be divided into individual subtasks or activities each of which requires time and scarce resources for its completion Also there is a desired objective to be attained for example minimization of project duration or of variation of resource utilization or maximization of net present value of the project Moreover there are given precedence relationships among activities prescribing the order in which activities must be carried out Project scheduling in its basic form consists of finding start times for all activities such that prescribed resource and precedence constraints are satisfied and an objective function is optimized Since the concept of a project can be interpreted quite broadly project scheduling problems arise in a great variety of practical situations These include construction work the development and introduction of new products service systems or software packages strategic long term planning in manufacturing and the service sector emergency planning and even the conducting of political campaigns Recently project scheduling has been successfully applied to production and operations management e.g. make to order production in manufacturing and batch production in process industries Since the late 1950s network based planning methods for project scheduling problems have been developed cf. Elmaghraby 1977 and Moder et al
