**Non-Solar X- and Gamma-Ray Astronomy** L. Gratton, 2012-12-06 Proceedings of IAU Symposium No 87 held in Rome Italy May 8 10 1969      **Non-solar X. and Gamma-ray Astronomy** Union Astronomique Internationale. Symposium, 1970

**Handbook of X-ray and Gamma-ray Astrophysics** Cosimo Bambi, Andrea Santangelo, 2024-02-29 This book highlights a comprehensive coverage of X ray and Gamma ray astrophysics The first and the second parts discuss respectively X ray and Gamma ray experimental techniques and observatories The third part is devoted to science including galactic and extragalactic sources The fourth and last parts are dedicated to analysis techniques in X ray and Gamma ray astronomy spectral analysis imaging analysis timing analysis and polarimetric analysis Presenting the state of the art in X ray and gamma ray astronomy this is both a valuable book for students and an important reference resource for researchers in the field

**The Orbiting Geophysical Observatories** John E. Jackson, 1978      *Astrophysics Optical and Infrared*, 1974-09-05 *Astrophysics Optical and Infrared*      Planets, Stars and Nebulae Studied with Photopolarimetry Tom Gehrels, 2018-01-30 The polarization study of celestial objects is a valuable part of optical astronomy and the author has done exceptionally well in bringing together contributions treating all aspects of the polarimetry field The first section contains a fine introduction and an excellent and definitive history of the subject The volume is well illustrated Highly recommended Choice The high quality of this book is clearly due to strict editorial attention to each paper and the discussions Gehrels's book will surely stand for many years as the fundamental reference source for polarization studies in astronomy as well as in atmospheric physics Journal of the Association of Lunar and Planetary Observers      From Ultra Rays to Astroparticles Brigitte

Falkenburg, Wolfgang Rhode, 2012-12-30 The scope of the book is to give an overview of the history of astroparticle physics starting with the discovery of cosmic rays Victor Hess 1912 and its background X ray radioactivity The book focusses on the ways in which physics changes in the course of this history The following changes run parallel overlap and or interact Discovery of effects like X rays radioactivity cosmic rays new particles but also progress through non discoveries monopoles etc The change of the description of nature in physics as consequence of new theoretical questions at the beginning of the 20th century giving rise to quantum physics relativity etc The change of experimental methods cooperations disciplinary divisions With regard to the latter change a main topic of the book is to make the specific multi disciplinary features of astroparticle physics clear      *Advances in Space Science and Technology* Frederick I. Ordway, 2014-12-01 *Advances in Space Science and Technology* Volume 11 provides information pertinent to the developments in space science and technology This book presents the advances in both solar and cosmic X ray astronomy all made possible by instruments carried in high altitude balloons in rockets and in orbiting satellites Organized into eight chapters this volume begins with an overview of solar X ray phenomena This text then examines the aspect of manned space flight with focus on nutrition for astronaut flight crews Other chapters consider how oxygen may be secured as a result of electrolyzing lunar rocks This book

discusses as well the significance of the Skylab experiments in the context of their disciplines and the part they play in the continuing evolution of space operations The final chapter deals with the educational satellite which is one of the most challenging of all practical applications of space technology This book is a valuable resource for readers who are interested in space science and technology *Structure and Evolution of the Galaxy* L.N. Mavridis, 2012-12-06 The present volume contains papers presented during the Advanced Study Institute on the Structure and Evolution of the Galaxy held under the auspices of the Science Committee North Atlantic Treaty Organization NATO in Lagonissi near Athens Greece between 8 19 September 1969 Seventeen astronomers from eight countries acted as lecturers in the Institute which was attended by sixty three students from twelve countries All the lectures given in the Institute were included in the volume with the exception of two lectures given by Professor P van de Kamp on Stellar Parallaxes and Objects of Very Low Mass the manuscripts of which were not submitted in time in order to be considered for publication It is obviously impossible in a two weeks course to cover the vast field of the Structure and Evolution of the Galaxy in all its aspects Effort has been made however to give the students a general outline of the field In addition to the lectures ample time was spent in discussions and personal contacts In order to simplify the publication it was felt reasonable however not to include the discussions in the present volume
