

## **B3 Test: (Additional Questions)**

### **Nonstructural Analysis and damage repair**

1. Technician A says that an unknown plastic can be identified by international symbols or ISO codes molded into the plastic parts. Technician B says that the body repair manual will give information about the types of plastics used on a vehicle. Who is right? - **ANS-Both A and B.** When possible, check the back of the bumper for ISO code and also refer to body repair manuals for information on the different types of plastics used by vehicle manufacturers.

2. Technician A says that a repair plan will prevent backtracking. Technician B says that if the estimate is not followed during the repair, the insurance company may not pay for the repair. Who is right? - **ANS-Both A and B.** You should always follow a repair plan to prevent redoing tasks on repairs. An estimate is used for ordering parts and is also a way to prepare a work order that may be followed by a technician before repairs are started on a damaged vehicle. Insurance companies may not pay for repairs that are not listed on an estimate. The insurance company, however, should be contacted or informed of any additional damage or parts that were not seen on the original estimate.

3. Technician A says that you should avoid running welding cables close to electronic displays or computers. Technician B says that you should avoid touching bare metal contacts to keep from getting a shock. Who is right? - **ANS-A only.** Welding cables need to be routed away from electronic displays and computers. The electrical current from a welder can cause damage to electronic displays and computers. If equipment is properly grounded, touching bare metal on a vehicle will not cause shocks.

4. When destructive testing a weld, Technician A says that the weld must break loose before the surrounding metal. Technician B says that the surrounding metal must break before the weld. Who is right? - **ANS-B only.** If proper penetration is achieved during the MIG welding process, metal on the surrounding area should tear away during a destruction test.

5. A magnet will stick to all of the following EXCEPT (A. high-strength steel, B. aluminum, C. low-alloy steel, D. mild steel)? - **ANS-Aluminum.**

6. A vehicle is brought into the shop for repair. Technician A says that you should wash the vehicle before sanding. Technician B says that you should clean the repair area with wax and grease remover before sanding. Who is right? - **ANS-Both A and B.** You should always wash the vehicle prior to sanding with soap and water to remove water-soluble contaminants and then use wax and grease remover to remove any remaining nonwater-soluble contaminants that can be on the old painted surface. Contaminants can be forced into the surface and cause problems at a later time.
