Abstract

A variety of nonsurgical treatment alternatives exists for acute and chronic low back pain. Patients should receive appropriate education about the favorable natural history of low back pain, basic body mechanics, and methods (e.g. exercises, activity modification, behavioral modification) that can reduce symptoms. Nonprescription medication is efficacious for mild to moderate pain. Nonsteroidal anti-inflammatory drugs, alone or in combination with muscle relaxants, relieve pain and improve overall symptoms of acute low back pain. Exercise therapy has limited value for acute low back pain, but strong evidence supports exercise therapy in the management of chronic low back pain. Moderately strong evidence supports the use of manipulation in acute back pain. Evidence is weak for the use of epidural corticosteroid injections in patients with acute low back pain, strong for short-term relief of chronic low back pain, and limited for long-term relief of chronic low back pain. The use of facet injections in the management of acute low back pain is not supported by evidence, nor is the effectiveness of orthoses, traction, magnets, or acupuncture. Trigger point injections are not indicated for nonspecific acute or chronic low back pain, and sacroiliac joint injections are not indicated in the routine management of low back pain. Conflicting evidence exists regarding the use of transcutaneous electrical nerve stimulation.

Low back pain is a common occurrence in the general population, affecting both sexes and all age groups, ethnic groups, and socioeconomic classes.^{1,2} Most patients recover quickly and without residual loss of function, however, recurrence is part of the natural history.^{3,4} Furthermore, chronic symptoms develop in 5% to 10% of patients.² As a result, the cost to the individual and to society is enormous.

Treatment of low back pain is

challenging. A variety of therapeutic interventions is available, but no single modality appears to be superior, and evaluations vary depending on the cause of pain and on individual, social, and occupational factors.^{5,7} Scientific evidence supports the use of some nonsurgical treatment alternatives in patients with acute and chronic low back pain.

In reviewing these nonsurgical treatment alternatives, we present evidence-based information; how-

Nonsurgical Management Of Acute Low Back Pain:

Pain Management: A Multidisciplinary Approach, 1e (Clinics Collections) Joel J. Heidelbaugh, 2015-10-15 Clinics Collections Pain Management draws from Elsevier's robust Clinics Review Articles database to provide multidisciplinary teams including general practitioners, orthopedists, obstetricians, neurologists, gastroenterologists, nurses, and other healthcare professionals with practical clinical advice and insights on this highly prevalent disease and its comorbidities. Clinics Collections Pain Management guides readers on how to apply current primary research findings on pain management to everyday practice to help overcome challenges and complications, keep up with new and improved treatment methods, and improve patient outcomes. Areas of focus include physiology and general management, musculoskeletal pain of the head, neck, upper body, and lower body, as well as neurologic disorders, psychologic disorders, and special considerations. Each article begins with keywords and key points for immediate access to the most critical information. Articles are presented in an easy-to-digest and concisely worded format. Elsevier Clinics Collections provide concise reviews of today's most prevalent conditions and significant medical developments. Other Clinics Collections titles available include Type II Diabetes Mellitus, Asthma, and Obesity.

Pain Medicine Siu Lun TSUI, Phoon Ping CHEN, Kwok Fu Jacobus Ng, 2010-08-01 This is designed as a textbook for medical practitioners preparing for higher qualification examinations in pain medicine, as well as a reference book for other medical and allied healthcare workers. A unique feature of the book is its multidisciplinary approach to manage pain. This is reflected by the contributors' multi-national cultural origin and the diversity in their medical background: anaesthesiology, neurosurgery, orthopaedic surgery, internal medicine, clinical oncology, clinical psychology, nursing, physiotherapy, and occupational therapy. Essential topics in pain medicine are grouped under five sections: scientific basis of pain medicine, common clinical pain conditions, pain pharmacology, interventional procedures, and multidisciplinary approach. Different aspects and approaches in modern pain medicine are covered, including advances in research on pain mechanism, pain psychology, epidemiology, diagnosis, pain assessment, patient evaluation, pain medications, up-to-date interventional procedures, cognitive behavioral therapy, and other specialized therapeutic modalities. Besides the above topics, which assist the patient in fighting acute, chronic, and cancer pain, there are two chapters dedicated to paediatric and geriatric patients, respectively, as special consideration is needed for these age groups.

Sports Medicine, An Issue of Primary Care Clinics in Office Practice Vincent Morelli, Andrew Gregory, 2013-06-28 This issue of Primary Care Clinics in Office Practice features expert clinical reviews on Sports Medicine, which includes current information on updates, advances, and controversies on topics such as the evaluation and treatment of head injuries, neck injuries, back injuries in the adult and pediatric athletic population, foot and ankle injuries, knee injuries, hip and groin injuries, shoulder injuries, elbow injuries, hand and wrist injuries, overuse injuries, sports nutrition, and ergogenic aids.
