Noradrenergic Neurons:

Noradrenergic Neurons Marianne Fillenz, 1990-05-25 The Noradrenergic Neurons examines the mechanisms that regulate the release and synthesis of the neurotransmitter noradrenaline Noradrenaline or norepinephrine and the physiological activity of the cells that manufacture and release it play an important role in response to stress and the development of resistance to stress as well as psychological mood itself This book discusses the response of the various nonadrenergic receptor subtypes to noradrenaline and the long lasting changes that underlie the striking plasticity of function manifested by noradrenergic cells which in turn are reflected in observable behavioral plasticity In recent years there has been no single book that presents an up to date synthesis of current knowledge on the biochemical anatomical and physiological aspects of this important group of brain and peripheral nervous system cells and their function in the whole behaving organism and this book aims to fill that gap This is informative reading for students of physiological psychology neurochemistry and medicine

Mechanisms in Parkinson's Disease Juliana Dushanova,2012-02-08 Parkinson s disease PD results primarily from the death of dopaminergic neurons in the substantia nigra Current PD medications treat symptoms none halt or retard dopaminergic neuron degeneration The main obstacle to developing neuroprotective therapies is a limited understanding of the key molecular mechanisms that provoke neurodegeneration The discovery of PD genes has led to the hypothesis that misfolding of proteins and dysfunction of the ubiquitin proteasome pathway are pivotal to PD pathogenesis Previously implicated culprits in PD neurodegeneration mitochondrial dysfunction and oxidative stress may also act in part by causing the accumulation of misfolded proteins in addition to producing other deleterious events in dopaminergic neurons Neurotoxin based models have been important in elucidating the molecular cascade of cell death in dopaminergic neurons PD models based on the manipulation of PD genes should prove valuable in elucidating important aspects of the disease such as selective vulnerability of substantia nigra dopaminergic neurons to the degenerative process
