Al-Tubaikh, 2010-03-14 In any radiology department worldwide around 60 70% of investigations deal with surgical cases
trauma tumors pre and postsurgical assessment surgical follow ups and more In spite of that radiology has a lot to offer in
the eld of internal medicine in terms of establishing con rming or rejecting diagnoses or favoring differential diagnoses
Before I joined radiology I worked as an internal physician for almost a year and almost another year and half as a general
surgeon This clinical experience leads me to look at radiological images with the eye of a radiologist and the mind of a
clinician when I examine patient radiological images I even take a history and do a clinical examination if I have the chance

when the patient is in the ultrasound CT or MRI room I have always believed that the radiologist's role is not confined to writing reports but it can be broadened to establish the diagnosis in the first hand in the same way as the clinician do In the medical library there are books dedicated to the clinical signs of internal medicine diseases interestingly there are no such books in the radiology library
