The Social Production of Technical Work Peter Whalley, 1986-01-01 Engineers appear in recent social science as central though somewhat elusive figures They play a particularly critical role in the various attempts to understand the impact of science based industry on the class structure of advanced capitalist societies In this book Peter Whalley brings these engineers into sharper focus He argues that engineers should not be seen as members of a glamorous new class of professionalized knowledge workers nor as a radicalized new working class or partially de skilled technical proletariat Rather they should be viewed as trusted employees selected socialized trained and rewarded to perform the discretionary tasks necessarily delegated by employers in the complex organizations of advanced capitalism The book draws extensively on observations and interviews to compare engineers work and understanding in the high and low tech settings of two British companies Computergraph an advanced electronics firm and Metalco a traditional British engineering giant Whalley compares the technical work structure of Britain with those of France and the United States He argues that the impact of technological change on class structure is critically mediated by nationally specific modes of organizing technical work and producing trusted workers The book goes beyond cultural explanations of these national variations to examine how they are created and reproduced in the organization of work and the structuring of occupations

HRM, Technical Workers and the Multinational Corporation Patrick McGovern, 2012-10-12 This book is the first major in depth study of the impact of contemporary management practices on a rapidly expanding set of white collar occupations namely technical workers It investigates whether HRM schemes such as employee appraisals and performance related pay have transformed technical work to such an extent that it can no longer be described as a service contract The book contains detailed examination of the nature of managerial control over employees who by virtue of their commitment present their employers with problems that are often ignored by prescriptive models of HRM The empirical evidence features case studies of matched pairs of hi tech firms in the Irish Republic The author examines recent debates about the nature of employment and the role of the multinational corporations within the so called Celtic Tiger Irish economy

Labor and Monopoly Capital Harry Braverman, 1998-12-01 This widely acclaimed book first published in 1974 was a classic from its first day in print Written in a direct inviting way by Harry Braverman whose years as an industrial worker gave him rich personal insight into work Labor and Monopoly Capital overturned the reigning ideologies of academic sociology This new edition features an introduction by John Bellamy Foster that sets the work in historical and theoretical context as well as two rare articles by Braverman The Degradation of Work in the Twentieth Century 1975 and Two Comments 1976 that add much to our understanding of the book

Between Craft and Science Stephen R.

Barley, Julian E. Orr, 2018-10-18 *Between Craft and Science* brings together leading scholars from sociology anthropology industrial relations management and engineering to consider issues surrounding technical work the most rapidly expanding sector of the labor force Part craft and part science part blue collar and part white collar technical work demands skill and knowledge but is rarely rewarded with commensurate status or salary The book first considers the anomalous nature of technical work and the difficulty of locating it in any conventional theoretical framework Only an ethnographic approach studying the actual doing of the work will make sense of the subject the authors conclude The studies that follow report daily practice filled with disjunctures and ironies that mirror the ambiguities of technical work s place in the larger culture On the basis of those studies the authors probe questions of policy management and education *Between Craft and Science* considers the cultural difficulties in understanding technical work and advances coherent practice oriented insights into this anomalous phenomenon

Organizational Technocratic Work and Personality Robert-Theophilus Dauphin, 2014-08-26

Organizational Technocratic Work and Personality is both a concise blueprint for organizational productivity and a practical guide to productive organizational performance and achievement whether within a public or private organization It is equally the best introduction to a less recognizable organizational work personality within academia and organizations

Organizational Technocratic Work and Personality is about how organizations must manage themselves to achieve productivity It looks at the practices that technocrats use to transform organizations resources into productivity goals into realism difficulties into inventions disconnectedness into commonality and risks into productivity It is about technocratic work that creates a climate in which technocrats turn organizations resources into remarkable worth Certainly there is no shortage of ideas on how organizations should manage themselves In this technological age this challenge seems to be increasing and through my contributions to address these challenges the potential exists to profoundly transform the way organizations are structured

Workforce Development and Skill Formation in Asia John Benson, Howard Gospel, Ying Zhu, 2013-05-29

Asia has undergone rapid transformation over the past several decades as many countries have embraced new technologies and the processes of globalisation Over this period the inflow of foreign capital into the region the level of trade amongst these countries and trade with other parts of the world has increased substantially The ensuing economic growth has led to some significant changes in labour markets and the demand for skilled employees and their deployment within organisations Focusing on a number of developed and developing Asian economies this book explores the dynamics of workforce development and skill formation and considers questions of both skills shortages and skills gaps The book assesses the current state of training in the selected Asian

economies the weaknesses and strengths of their various training approaches and what the present state of training means for the future economic development of these economies **Lost Managers** John Child, Bruce Partridge, 1982-06

White-Collar Unionism K Prandy, A Stewart, R M Blackburn, 1983-06-30 Power in the Workplace Steven Peter Vallas, 1993-01-01 This book presents a systematic case study of the hi tech communications industry that reveals many trends in managerial authority in the workplace Vallas reveals the mechanisms that enable advanced capitalist firms to achieve and maintain control over the workers they employ He demonstrates that the spread and integration of automated technologies place lower level human labor in positions of declining power The new regime does not deskill workers and need not lead toward what some have called electronic sweatshops Nevertheless Vallas concludes that increasing managerial control over production poses a major challenge to those who advocate labor participation in the management of American industries **International Labour Documentation** ,1973
