Rubin,2012-09-27 The field of autobiographical memory has made dramatic advances since the first collection of papers in the area was published in 1986 Now over 25 years on this book reviews and integrates the many theories perspectives and approaches that have evolved over the last decades A truly eminent collection of editors and contributors appraise the basic neural systems of autobiographical memory its underlying cognitive structures and retrieval processes how it develops in infancy and childhood and then breaks down in aging its social and cultural aspects and its relation to personality and the self Autobiographical memory has demonstrated a strong ability to establish clear empirical generalizations and has shown its practical relevance by deepening our understanding of several clinical disorders as well as the induction of false memories in the legal system It has also become an important topic for brain studies and helped to enlarge our general understanding of the brain **The Hippocampus Book** Per Andersen,2007 The hippocampus is one of a group of remarkable structures embedded within the brain s medial temporal lobe Long known to be important for memory it has been a prime focus of neuroscience research for many years The Hippocampus Book promises to facilitate developments in the field in a major way by bringing together for the first time contributions by leading international scientists knowledgeable about hippocampal anatomy physiology and function This authoritative volume offers the most comprehensive up to date account of what the hippocampus does how it does it and

what happens when things go wrong At the same time it illustrates how research focusing on this single brain structure has revealed principles of wider generality for the whole brain in relation to anatomical connectivity synaptic plasticity cognition and behavior and computational algorithms Well organized in its presentation of both theory and experimental data this peerless work vividly illustrates the astonishing progress that has been made in unraveling the workings of the brain The Hippocampus Book is destined to take a central place on every neuroscientist's bookshelf

Thomism and the Problem of Animal Suffering B. Kyle Keltz, 2020-06-12 The problem of animal suffering is the atheistic argument that an all knowing all powerful and all good God would not use millions of years of animal suffering disease and death to form a planet for human beings This argument has not received as much attention in the philosophical literature as other forms of the problem of evil yet it has been increasingly touted by atheists since Charles Darwin While several theists have attempted to provide answers to the problem they disagree with each other as to which answer is correct Also some of these theists have given in to the problem and believe it entails that God is limited in certain ways B Kyle Keltz seeks to provide a classical answer to the problem of animal suffering inspired by the medieval philosopher theologian Thomas Aquinas In doing so Keltz not only utilizes the wisdom of Aquinas but also contemporary insights into non human animal minds from contemporary philosophy and science Keltz provides a compelling neo Thomistic answer to the problem of animal suffering and explains why the classical God of theism would create a world that includes animal death

and comparative psychologists Time and Memory Christoph Hoerl, Teresa McCormack, 2001 The capacity to represent and think about time and the capacity to recollect the past are two of the most fundamental and least understood aspects of human cognition and consciousness This book throws new light on central issues in the study of the mind by uniting for the first time psychological and philosophical approaches dealing with the connection between temporal representation and memory Fifteen specially written essays by leading psychologists and philosophers investigate the way in which time is represented in memory and the role memory plays in our ability to reason about time They offer insights into current theories of memory processes and of the mechanisms and cognitive abilities underlying temporal judgements and draw out fundamental issues concerning the phenomenology and epistemology of memory and our understanding of time The chapters are arranged into four sections each focused on one area of current research I Keeping Track of Time and Temporal Representation II Memory Awareness and the Past III Memory and Experience IV Knowledge and the Past The Epistemology and Metaphysics of Time A general introduction gives an overview of the topics discussed and makes explicit central themes which unify the different philosophical and psychological approaches *The Rational Animal* Ludwig Huber, 2024-07-09 In this book the major and at the same time most difficult questions of comparative cognition research here called the sextet of animal intelligence are presented using good examples discussed in all their facets and finally answered with due caution Starting with the question of human rationality which is illuminated historically at the beginning and presented as a framework concept the latest research is dealt with which either revises preferred interpretation schemes or calls for new ones It is particularly important to critically question hastily conceived categorisations often derived from research on the human species and from everyday psychological notions and to consider so called animal irrationality a k a mis performance from the perspective of species specific natural requirements Why is it at all important to know whether animals can act rationally intentionally or consciously The answer is because it is of both theoretical and practical relevance Theoretical relevance is twofold because it is good in itself to understand animals better but this knowledge is then also of great importance for assessing ourselves This brings up the practical relevance we are not only surrounded by animals we live with animals we live from animals Yet we see ourselves as separate from them in important ways Consciousness language and rationality are essential characteristics with which we justify our human uniqueness and thus our superiority and ultimately our right to dominate and use animals in many ways If an animal can feel pain we feel obliged to avoid inflicting unnecessary pain on it But yet we do not accord it the special inherent value and dignity associated with consciousness and rationality This has far reaching consequences for human action and the coexistence of humans and animals **Dynamic Coordination in the Brain** Christoph Von Der Malsburg, William A. Phillips, Wolf Singer, 2010-07-09 An examination of how widely distributed and specialized activities of the brain are flexibly and effectively coordinated A fundamental shift is occurring in neuroscience and related disciplines In the past researchers focused on functional specialization of the brain

discovering complex processing strategies based on convergence and divergence in slowly adapting anatomical architectures Yet for the brain to cope with ever changing and unpredictable circumstances it needs strategies with richer interactive short term dynamics Recent research has revealed ways in which the brain effectively coordinates widely distributed and specialized activities to meet the needs of the moment This book explores these findings examining the functions mechanisms and manifestations of distributed dynamical coordination in the brain and mind across different species and levels of organization The book identifies three basic functions of dynamic coordination contextual disambiguation dynamic grouping and dynamic routing It considers the role of dynamic coordination in temporally structured activity and explores these issues at different levels from synaptic and local circuit mechanisms to macroscopic system dynamics emphasizing their importance for cognition behavior and psychopathology Contributors Evan Balaban Gyrgy Buzsáki Nicola S Clayton Maurizio Corbetta Robert Desimone Kamran Diba Shimon Edelman Andreas K Engel Yves Fregnac Pascal Fries Karl Friston Ann Graybiel Sten Grillner Uri Grodzinski John Dylan Haynes Laurent Itti Erich D Jarvis Jon H Kaas J A Scott Kelso Peter Knig Nancy J Kopell Ilona Kovács Andreas Kreiter Anders Lansner Gilles Laurent Jörg Lücke Mikael Lundqvist Angus MacDonald Kevan Martin Mayank Mehta Lucia Melloni Earl K Miller Bitan Moghaddam Hannah Monyer Edvard I Moser May-Britt Moser Danko Nikolic William A Phillips Gordon Pipa Constantin Rothkopf Terrence J Sejnowski Steven M Silverstein Wolf Singer Catherine Tallon-Baudry Roger D Traub Jochen Triesch Peter Uhlhaas Christoph von der Malsburg Thomas Weisswange Miles Whittington Matthew Wilson

Social Memory, Silenced Voices, and Political Struggle Cunningham Bissell, Marie-Aude

Fouere, 2018-04-24 This volume focuses on the cultural memory and mediation of the 1964 Zanzibar revolution analyzing its continuing reverberations in everyday life The revolution constructed new conceptions of community and identity race and cultural belonging as well as instituting different ideals of nationhood citizenship sovereignty As the commemoration of the 50th anniversary of the revolution revealed the official versions of events have shifted significantly over time and the legacy of the uprising is still deeply contested In these debates the question of Zanzibari identity remains very much at stake Who exactly belongs in the islands and what historical processes brought them there What are the boundaries of the nation and who can claim to be an essential part of this imagined and embodied community Political belonging and power are closely intertwined with these issues of identity and history raising intense debates and divisions over precisely where Zanzibar should be situated within the national order of things in a postcolonial and interconnected world Attending to narratives that have been overlooked ignored or relegated to the margins the authors of these essays do not seek to simply define the revolution or to establish its ultimate meaning Instead they seek to explore the continuing echoes and traces of the revolution fifty years on reflected in memories media and monuments Inspired by interdisciplinary perspectives from anthropology history cultural studies and geography these essays foreground critical debates about the revolution often conducted sotto voce and located well off the official stage attending to long silenced questions submerged doubts rumors and secrets or

things that cannot be said Olfactory memory networks: from emotional learning to social behaviors Regina M. Sullivan, Donald A. Wilson, Nadine Ravel, Anne-Marie Mouly, 2015-05-08 Odors are powerful stimuli that can evoke emotional states and support learning and memory Decades of research have indicated that the neural basis for this strong odor emotional memory connection is due to the uniqueness of the anatomy of the olfactory pathways Indeed unlike the other sensory systems the sense of smell does not pass through the thalamus to be routed to the cortex Rather odor information is relayed directly to the limbic system a brain region typically associated with memory and emotional processes This provides olfaction with a unique and potent power to influence mood acquisition of new information and use of information in many different contexts including social interactions Indeed olfaction is crucially involved in behaviors essential for survival of the individual and species including identification of predators recognition of individuals for procreation or social hierarchy location of food as well as attachment between mating pairs and infant caretaker dyads Importantly odors are sampled through sniffing behavior This active sensing plays an important role in exploratory behaviors observed in the different contexts mentioned above Odors are also critical for learning and memory about events and places and constitute efficient retrieval cues for the recall of emotional episodic memories This broad role for odors appears highly preserved across species In addition the consistent early developmental emergence of olfactory function across diverse species also provides a unique window of opportunity for analysis of myriad behavioral systems from rodents to nonhuman primates and humans This when combined with the relatively conserved organization of the olfactory system in mammals provides a powerful framework to explore how complex behaviors can be modulated by odors to produce adaptive responses and to investigate the underlying neural networks The present research topic brings together cutting edge research on diverse species and developmental stages highlighting convergence and divergence between humans and animals to facilitate translational research
