Remnant Population Elizabeth Moon, 2003-09-30 Finalist for the Hugo Award Ofelia tough kind wise and unwise fond of food tired of foolish people is one of the most probable heroines science fiction has ever known Ursula K Le Guin For forty years Colony 3245 12 has been Ofelia s home On this planet far away in space and time from the world of her youth she has lived and loved weathered the death of her husband raised her one surviving child lovingly tended her garden and grown placidly old And it is here that she fully expects to finish out her days until the shifting corporate fortunes of the Sims Bancorp Company dictates that Colony 3245 12 is to be disbanded its residents shipped off deep in cryo sleep to somewhere new and strange and not of their choosing But while her fellow colonists grudgingly anticipate a difficult readjustment on some distant world Ofelia savors the promise of a golden opportunity Not starting over in the hurly burly of a new community but closing out her life in blissful solitude in the place she has no intention of leaving A population of one With everything she needs to sustain her and her independent spirit to buoy her Ofelia actually does start life over for the first time on her own terms free of the demands the judgments and the petty tyrannies of others But when a reconnaissance ship returns to her idyllic domain and its crew is mysteriously slaughtered Ofelia realizes she is not the sole inhabitant of her paradise after all And when the inevitable time of first contact finally arrives she will find her life changed yet again in ways she could never have imagined Pure satisfaction from cover to cover Anne McCaffrey Habitat Requirements for Chesapeake Bay Living Resources ,1991

The Codex of the Endangered Species Act Lowell E. Baier, 2023-07-25 The Endangered Species Act of 1973 ESA is one of the most cherished and reviled laws ever passed It mandates protection and preservation of all the nation's species and biodiversity whatever the cost It has been a lightning rod for controversy and conflicts between industry business and environmentalists The year

2023 marks the 50th anniversary of this law and provides an opportunity for a measured and thorough evaluation thereof. We cannot know today's challenges and opportunities without understanding their histories. This book is the most comprehensive history of the ESA ever published and the first to consider the entire history of the law from all angles in a single volume. The history of the ESA has been one of increasing impact, complexity, and controversy. In 1978 the Supreme Court declared that Congress intended for the U.S. government to save all species at any cost, and thereafter application of the ESA became steadily more controversial, as seen in the example of the northern spotted owl and the timber wars in the Pacific Northwest in the late 1980s and early 90s, and then everywhere as the ESA became a political football in the highly partisan environment of the late 1990s and amendments to the law ceased. This book is not only a history but a call to action. It will take more conservation, more funding, and more innovative solutions if we are to save our wildlife and biodiversity. It will take the engagement of every American to muster the collective will to meet this challenge. The hope of this book is that we will be able to look back and say that we accomplished more in the second 50 years of the ESA than we did in the first.

The Atlantic Salmon Eric Verspoor, Lee Stradmeyer, Jennifer L. Nielsen, 2008-04-15. Atlantic Salmon is a cultural icon throughout its North Atlantic range; it is the focus of probably the world's highest profile recreational fishery and is the basis for one of the world's largest aquaculture industries. Despite this, many wild stocks of salmon are in decline, and underpinning this is a dearth of information on the nature and extent of population structuring and adaptive population differentiation and its implications for species conservation. This important new book will go a long way to rectify this situation by providing a thorough review of the genetics of Atlantic salmon. Sponsored by the European Union and the Atlantic Salmon Trust, this book comprises the work of an international team of scientists carefully integrated and edited to provide a landmark book of vital interest to all those working with Atlantic salmon. **Federal Register**, 2013-04. **Species Survival in Fragmented Landscapes** J. Settele, Chris Margules, Peter Poschlod, Klaus Henle, 2012-12-06. The effects of isolation, area size, and habitat quality on the survival of animal and plant populations in the cultural landscape are central aspects of a research project started in Germany in 1993. Forschungsverbund Isolation, Fläche und Biotopqualität (FIB) abbreviated to FIB. After a long period of preparation, scientists from seven universities and one research institution started to work within the frame of this project. Funding for four years was provided by the former German Federal Ministry of Research and Technology (BMFT), now the Ministry of Education and Research (BMBF). A strong focus of the project has been the improvement of the methodology for environmental impact assessments and the implementation of results into environmental planning. As there is a certain risk that national projects develop some kind of mental inertia in breeding, it was decided to discuss concepts, methods, and first results with scientists of international reputation at a rather early stage of the project. For this purpose, an international workshop was held in the small village of Lubitz north of Leipzig, state of Saxony, in March 1995. 130 scientists from 10 nations met to discuss and debate issues surrounding habitat fragmentation for three days. Papers presented there formed

the basis for this book As discussions included general reviews as well as particular case studies we decided to structure this book in a similar way Consequently a combination of broad and more general review like papers as well as original papers are presented Biological Science Jon Scott, Anne Goodenough, Gus Cameron, Dawn Hawkins, Martin Luck, Jenny Koenig, Alison Snape, Despo Papachristodoulou, Kay Yeoman, Mark Goodwin, 2022 A fresh approach to biology centred on a clear narrative active learning and confidence with quantitative concepts and scientific enquiry Spanning the breadth of biological science and designed for flexible learning it will give you a deeper understanding of the key concepts and an appreciation of biology as a dynamic experimental science Recovery Plan for U.S. Pacific Populations of the Hawksbill Turtle (*Eretmochelys Imbricata*) Pacific Sea Turtle Recovery Team (U.S.), 1998 **Issues in Global Environment—Biology and Geoscience: 2013 Edition**, 2013-05-01 Issues in Global Environment Biology and Geoscience 2013 Edition is a ScholarlyEditions book that delivers timely authoritative and comprehensive information about Wildlife Research The editors have built Issues in Global Environment Biology and Geoscience 2013 Edition on the vast information databases of ScholarlyNews You can expect the information about Wildlife Research in this book to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of Issues in Global Environment Biology and Geoscience 2013 Edition has been produced by the world's leading scientists engineers analysts research institutions and companies All of the content is from peer reviewed sources and all of it is written assembled and edited by the editors at ScholarlyEditions and available exclusively from us You now have a source you can cite with authority confidence and credibility More information is available at <http://www.ScholarlyEditions.com> Advances in the Ecology of Stream-Dwelling Salmonids Javier Lobon-Cervia, Phaedra Budy, Robert Gresswell, 2024-02-29 Many salmonids inhabit streams during the whole or a substantial part of their lifetime Streams as networks of cold waters running over rifles pools and tables of gravel pebble and stony substratum are fed by rainfall and snowmelt and may be subject to spates and droughts Hence these lotic systems are heterogeneous by nature and vary substantially in temperature and discharge along their environmental gradients In these habitats salmonids encounter suitable reproductive and feeding habitats where they exhibit a dizzying array of life history traits and an overwhelming variability in size growth and density Essentially predators upon organisms drifting across the water column they become apex piscivores at large sizes They may also serve as prey for aquatic macroinvertebrates at the youngest stages and as they grow they may become prey for birds and mammals In addition many populations play a major role in the recycling of biogeochemical elements critical for the trophic dynamics of their home streams Empirical assessment of the ecological functioning of stream salmonids has been a tireless endeavor since the pioneer studies by Allen 1951 Chapman 1966 McFadden 1964 and Northcote 1966 further enhanced by the IBP 1964 1974 Gerking 1967 and extended to experimental approaches during the last decades Northcote Lobon Cervia 2010 Lobon Cervia Sanz 2017 Kershner et al 2019 It has become increasingly apparent that streams are severely threatened by

human abuse and misuse including over extraction diversion damming and pollution in addition to the more recent threat of global warming Furthermore salmonids themselves are threatened by genetic introgressions diseases and parasites related to uncontrolled introductions of individuals from aquaculture and over exploitation by angling These threats have triggered important social and political concerns to the extent of becoming research priorities for major agencies and institutions In this context we attempt to add an overview to this endeavor by updating and summarizing the documented ecology of stream living salmonids with reference to the factors and mechanisms underlying the growth density and life history that interact to determine the size number and distribution of individuals encountered in any wild population

in Mammals Jorge Ortega, Jesus E. Maldonado, 2020-01-24 This book focuses on the use of molecular tools to study small populations of rare and endangered mammals and presents case studies that apply an evolutionary framework to address innovative questions in the emerging field of mammalian conservation genomics using a highly diverse set of novel molecular tools Novel and more precise molecular technologies now allow experts in the field of mammalogy to interpret data in a more contextual and empirical fashion and to better describe the evolutionary and ecological processes that are responsible for the patterns they observe The book also demonstrates how recent advances in genetic genomic technologies have been applied to assess the impact of environmental anthropogenic changes on the health of small populations of mammals It examines a range of issues in the field of mammalian conservation genomics such as the role that the genetic diversity of the immune system plays in disease protection and local adaptation the use of noninvasive techniques and genomic banks as a resource for monitoring and restoring populations the structuring of population by physical barriers and genetic diversity Further by integrating research from a variety of areas including population genetics molecular ecology systematics and evolutionary and conservation biology it enables readers to gain a deeper understanding of the conservation biology of mammals that are at increasing risk of extinction at local regional and global scales As such it offers a unique resource for a broad readership interested in the conservation biology of mammals and conservation management strategies to better preserve biodiversity
