Build a Remote-Controlled Robot...for Under 300 Dollars David R. Shircliff,1986 Remote Control Robotics Craig Sayers,2012-12-06 Increasingly robots are being used in environments inhospitable to humans such as the deep ocean inside nuclear reactors and in deep space Such robots are controlled by remote links to human operators who may be close by or thousands of miles away The techniques used to control these robots is the subject of this book The author begins with a basic introduction to robot control and then considers the important problems to be overcome delays or noisy control lines feedback and response information and predictive displays Readers are assumed to have a basic understanding of robotics though this may be their first exposure to the subject of telerobotics Professional engineers and roboticists will find this an invaluable introduction to this subject Build A Remote-Controlled Robot David R. Shircliff,2002-04-12 NOW BUILDING YOUR OWN REMOTE CONTROLLED QUESTOR ROBOT IS MUCH EASIER THAN YOU THINK VERY INEXPENSIVE GREAT FUN SIMPLE WITH THIS BOOK Here are all the step by step heavily illustrated plans you need to build a full sized remote controlled robot named Questor without any advanced electronic or programming skills It s the perfect way to jump into the fascinating world of robotics and be part of all the excitement Written specifically with first time builders in mind Build a Remote Controlled Robot includes COMPLETE plans for building Questor 100 detailed photographs of every stage of the assembly process Simple to read wiring diagrams A complete parts list including valuable tips on where to find components easily and inexpensively Written by a teacher with experience enough to know what questions you would ask this guide bypasses heavy duty design theory and gets right to the heart of building Questor the robot with an emphasis on having a great time while doing it *Make an Arduino-Controlled Robot* Michael Margolis,2012-10-16 Provides instructions on how to build robots that sense and interact with their environment using an Arduino microcontroller and software creation environment to make a robot that can roam around sense its environment and perform various tasks **Robot Builder** Thomas Messerschmidt,John Baichtal,2014 This easy tutorial explains all aspects of robot building It teaches basic robot programming and gives you all the cut and paste code you ll need for some pretty sophisticated projects **Internet-based Control Systems** Shuang-Hua Yang,2011-02-09 The Internet plays a significant and growing role in real time industrial manufacturing scheduling and management A considerable research effort has led to the development of new technologies that make it possible to use the Internet for supervision and control of industrial processes Internet based Control Systems addresses the challenges that need to be overcome before the Internet can be beneficially used not only for monitoring of but also remote control industrial plants New design issues such as requirement specification architecture selection and user interface design are dealt with Irregular data transmission and data loss and in extreme cases whole system instability may result from Internet time delay this book guards against such phenomena from both computer science and control engineering perspectives Security breaches and safety risks in an Internet based control system could have very serious

consequences and the author gives specific advice for avoiding them This book is unique in bringing together multiple strands of research mainly from computer science and control engineering into an over arching study of the entire subject Practical perspectives are explored both through case studies in several chapters and through real applications including robot arm control web based simulator for a catalytic reactor virtual supervision parameter control of a water tank system model predictive control for a process control unit remote control performance monitoring and maintenance remote control system design and implementation Internet based Control Systems is a useful introduction and guide for researchers in control engineering and computer science and developers of real time Internet enabling software It can also be used for teaching a final year option or elective on Internet enabled real time system design or as an advanced example of real time software design for graduates
