Remote Sensing and Geographical Information Systems for Resource Management in Developing Countries Alan S. Belward, Carlos R. Valenzuela, 2010-12-15 There is a growing realization that our expanding population and thirst for industrial and technological development directly threaten our environment This awareness has emerged as the nations of the world have developed a global outlook the earth was seen and photographed as a whole for the first time during the Apollo missions of the late 1960s also there is increasing recognition that the earth functions as a single system in which every living organism interacts with every other and that ecological processes do not recognize geopolitical boundaries At the same time however concern with our environment must be balanced against the need to provide food housing health care education and employment for the growing populace This conflict can only be resolved through careful management of the

earth's resources Management of natural resources implies knowledge regarding their state distribution and dynamics This in turn implies the active collection and recording of environmental data In fact such data have been collected throughout history From the earliest civilizations inventories through field surveys have been made concerning the spatial organization of the environment These have then been translated through the process of cartography into maps maps for navigation for military use for agriculturalists maps of a general nature such as topographic maps and thematic maps showing more specific themes such as land use

Fostering Transformative Research in the Geographical Sciences

National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Geographical Sciences Committee, Committee on Identifying Transformative Research in the Geographical Sciences, 2019-03-22 The central purpose of all research is to create new knowledge In the geographical sciences this is driven by a desire to create new knowledge about the relations between space place and the anthropogenic and non anthropogenic features and processes of the Earth But some research goes beyond these modest aims and creates new opportunities for further research or affects the process of knowledge acquisition more broadly or changes the way other researchers in a domain think about the world and go about their business Due to its positive impacts transformative research can be regarded as inherently having greater value than more conventional research and funding agencies clearly

regard transformative research as something to be encouraged and funded through special programs Assessments of transformative research funding initiatives are few and provide a mixed picture of their effectiveness The challenge is whether transformative research can be identified at the time it is proposed rather than after it has been conducted communicated and its influence on the discipline has become clear Fostering Transformative Research in the Geographical Sciences reviews how transformative research has emerged in the past what its early markers were and makes recommendations for how it can be nurtured in the future Sustainable Development and Geospatial Technology Chetan Sharma,Anoop Kumar Shukla,Shray Pathak,Vijay P. Singh,2024-09-26 This two volume set showcases the various ways in which geospatial technology can be used to achieve sustainable development goals across different sectors such as urban planning natural resource management agriculture disaster management and energy management The books provide insights into the potential of geospatial technology in promoting sustainable development practices and addressing challenges related to climate change environmental degradation and socio economic development Both volumes together are a comprehensive guide that showcases the potential of geospatial technology in promoting sustainable development practices across different sectors and will serve as an essential resource for professionals policymakers researchers and students interested in sustainable development and geospatial technology Volume 2 explores practical applications insightful case studies and emerging trends within the dynamic intersection of sustainable development and geospatial technology Delving into the critical domain of water resources and agriculture it scrutinizes the application of geospatial tools in river basin management integrated water resources management IWRM sustainable agriculture and precision agriculture The volume then shifts its focus to disaster management energy and the future encompassing geospatial data science for disaster resilience Earth observation for sustainable energy management and diverse case studies that highlight the impact of geospatial technology on sustainable development Moreover it ventures into environmental monitoring and analysis discussing topics like land use planning climate change mitigation environmental monitoring technology and socioeconomic inequalities **Geospatial Technology for Water Resource Applications** Prashant K. Srivastava,Prem Chandra Pandey,Pavan Kumar,Akhilesh Singh Raghubanshi,Dawei Han,2016-07-26 This book advances the scientific understanding development and application of geospatial technologies related to water resource management It presents recent developments and applications specifically by utilizing new earth observation datasets such as TRMM GPM AMSR E 2 SMOS SMAP and GCOM in combination with GIS artificial intelligence and hybrid techniques By linking geospatial techniques with new satellite missions for earth and environmental science the book promotes the synergistic and multidisciplinary activities of scientists and users working in the field of hydrological sciences Earth Resources: A Continuing Bibliography with Indexes (issue 61) ,1989 Groundwater Exploitation in the High Plains David E. Kromm,Stephen E. White,1992 In the forty years since the invention of center pivot irrigation the High Plains aquifer system has been depleted at an astonishing rate Is

the region now in danger of becoming the Great American Desert In this volume eleven of the most knowledgeable scholars and water professionals in the Great Plains insightfully examine the dilemmas of groundwater use They address both the technical problems and the politics of water management providing a badly needed analysis of the implications of large scale irrigation
