**Remote Sensing of Night-time Light** Christopher Elvidge, Xi Li, Yuyu Zhou, Changyong Cao, Timothy A. Warner, 2021-08-09 Satellite images acquired at night provide a visually arresting perspective of the Earth and the human activities that light up the otherwise mostly dark Earth. These night time light satellite images can be compiled into a geospatial time series that represent an invaluable source of information for both the natural and social sciences. Night time light remote sensing has been shown to be particularly useful for a range of natural science and social science applications including studies relating to urban development, demography, sociology, fishing activity, light pollution, and the consequences of civil war. Key sensors for these time series include the Defense Meteorological Satellite Program's Operational Linescan System (DMSP OLS) and the Suomi National Polar-orbiting Partnership Satellite's Visible Infrared Imaging Radiometer Suite (Day/Night Band). Suomi NPP VIIRS DNB. An increasing number of alternative sources are also available including high spatial resolution and multispectral sensors. This book captures key methodological issues associated with pre-processing night time light data, documents state-of-the-art analysis methods, and explores a wide range of applications. Major sections focus on NPP VIIRS DNB processing, inter-calibration between NPP VIIRS and DMSP OLS, applications associated with socio-economic activities, applications in monitoring urbanization, and fishing activity monitoring. The chapters in this book were originally published as a special issue of the International Journal of Remote Sensing.

**A Holistic Case-Study Approach to Applying Satellite Remote Sensing to Disaster Management** Kazuya Kaku, 2021-09-13 This book brings together a number of holistic case studies focusing on the application of satellite remote sensing to disaster management. It highlights the human factors behind such application and explores the various fields in which it can be used.

*Urban Growth Analysis and Remote Sensing* Basudeb Bhatta, 2012-06-19 This book documents research conducted on the analysis of urban growth and sprawl by using remote sensing data and GIS techniques. The research was conducted between 1980-2010 in the city of Kolkata, India. The aim of the research was to use metrics that were less demanding in terms of data and computation than normal metrics. However, it has been found that most of them were inferior in capturing insights of urban sprawl. For this book, some of these metrics have therefore been modified and new ones are proposed. The research focuses on problems associated with the analysis of urban growth by using remote sensing data from a technological perspective.
