Saving Migrant Birds:

Saving Migrant Birds John Faaborg, 2002-12-01 In the 1980s numerous scientific surveys documented both declining bird populations especially among Neotropical songbirds that winter in the tropics and the loss of tropical rain forest habitat Drawing the seemingly obvious conclusion scientists and environmental activists linked songbird declines to loss of tropical habitats and alerted the world to an impending ecological catastrophe Their warnings led to the establishment of the Neotropical Migratory Bird Conservation Program also known as Partners in Flight the self proclaimed largest conservation effort in history Looking back over more than a decade of efforts to save migrant birds John Faaborg offers the first serious evaluation of the state of songbird populations today the effectiveness of conservation programs such as Partners in Flight and the reliability and completeness of scientific research on migrant birds Taking neither an alarmist nor a complacent approach he shows that many factors besides habitat loss affect bird populations and that Neotropical migrants as a group are not declining dramatically though some species adapt to habitat alteration more successfully than others Faaborg's state of the art survey thus clarifies the kinds of information we will need and the conservation efforts we should undertake to ensure the long term survival of Neotropical migrant birds

Saving Migrant Birds John Faaborg, 2014-02-19 Rigorous and well defended Faaborg makes many fresh and in some cases provocative points regarding management guidelines for migrant birds Kenneth Able Great Plains Research In the 1980s numerous scientific surveys documented both declining bird populations especially among Neotropical songbirds that winter in the tropics and the loss of tropical rain forest habitat Drawing the seemingly obvious conclusion scientists and environmental activists linked songbird declines to loss of tropical habitats and alerted the world to an impending ecological catastrophe Their warnings led to the establishment of the Neotropical Migratory Bird Conservation Program also known as Partners in Flight the self proclaimed largest conservation effort in history Looking back over more than a decade of efforts to save migrant birds John Faaborg offers the first serious evaluation of the state of songbird populations today the effectiveness of conservation programs such as Partners in Flight and the reliability and completeness of scientific research on migrant birds Taking neither an alarmist nor a complacent approach he shows that many factors besides habitat loss affect bird populations and that Neotropical migrants as a group are not declining dramatically though some species adapt to habitat alteration more successfully than others Faaborg's state of the art survey thus clarifies the kinds of information we will need and the conservation efforts we should undertake to ensure the long term survival of Neotropical migrant birds Presents a carefully and closely reasoned argument about the magnitude of the conservation problems facing migrant birds how we can reduce these problems and how current conservation efforts have enormous value even if there is no immediate crisis Scott K Robinson Professor and Head Department of Animal Biology University of Illinois

David S. Wilcove,2007-11 Animal migration is a magnificent sight a mile long blanket of cranes rising from a Nebraska river and filling the sky hundreds of thousands of wildebeests marching across the Serengeti a blaze of orange as millions of monarch butterflies spread their wings to take flight Nature s great migrations have captivated countless spectators none more so than premier ecologist David S Wilcove In No Way Home his awe is palpable as are the growing threats to migratory animals We may be witnessing a dying phenomenon among many species Migration has always been arduous but today s travelers face unprecedented dangers Skyscrapers and cell towers lure birds and bats to untimely deaths fences and farms block herds of antelope salmon are caught en route between ocean and river breeding and wintering grounds are paved over or plowed and global warming disrupts the synchronized schedules of predators and prey The result is a dramatic decline in the number of migrants Wilcove guides us on their treacherous journeys describing the barriers to migration and exploring what compels animals to keep on trekking He also brings to life the adventures of scientists who study migrants Often as bold as their subjects researchers speed wildly along deserted roads to track birds soaring overhead explore glaciers in search of frozen locusts and outfit dragonflies with transmitters weighing less than one one hundredth of an ounce Scientific discoveries and advanced technologies are helping us to understand migrations better but alone they won t stop sea turtles and songbirds from going the way of the bison or passenger pigeon What s required is the commitment and cooperation of the far flung countries migrants cross long before extinction is a threat As Wilcove writes protecting the abundance of migration is key to protecting the glory of migration No Way Home offers powerful inspiration to preserve those glorious journeys
