A Review of the Recent Scientific Literature on Irrigation Induced and Enhanced Wetlands

by Jacob F. Berkowitz and Darrell E. Evans

PURPOSE: The following report provides a preliminary review of the recent scientific literature pertaining to the ecology and management of irrigation induced and enhanced wetlands. The report is designed to provide insight into the complexity of identifying irrigated wetlands for jurisdictional purposes, outline the current state-of-the-science regarding irrigated wetlands, and provide basic guidance on future actions required to address issues related to irrigated wetlands.

OUTLINE: The report contains: 1) a brief introduction, 2) background information summarizing the major issues associated with irrigated wetlands, 3) a description of the methods utilized in drafting the literature review, 4) summary of findings regarding the major categories of available scientific literature, and 5) appendices containing over 80 references, associated abstracts, and sources of additional information.

INTRODUCTION: The U.S. Army Corps of Engineers (USACE) is responsible for administering provisions Section 404 of the Clean Water Act, including the permitting and regulation of wetlands and other aquatic resources. Wetlands are identified based upon the observation of indicators of wetland hydrology, hydrophytic vegetation, and hydric soils (Environmental Laboratory 1987; USACE 2008). In areas exposed to extended periods of irrigation, wetland indicators may be supported solely or in part by presence of irrigation waters (USACE 2010). The presence of irrigation activities has resulted in complex and difficult wetland delineations, especially in the arid west region (Department of Ecology 2010). In order to address the challenges associated with identifying wetlands in irrigated areas, ERDC staff developed a multi-year proposal designed to provide technical support regarding irrigated wetlands issues. The following literature review represents the first phase of this effort.

BACKGROUND: Agricultural activities throughout the United States resulted in the loss of wetland areas, including a 90% reduction in historical wetlands of California's central valley (Lemly et al. 2000; Garone 2011) and a steady decrease in aquifer levels capable of supporting natural wetlands (Heermann 2003). However, irrigation activities associated with agriculture create and support irrigated wetlands due to the addition of irrigation waters and seasonal increases in stream levels as a result of upstream irrigation (Ekstein and Hygnstrom 1996; Sueltenfuss et al. 2013; Kendy and Bredehoeft 2006; Strange et al. 1999). Gollehan and Quimby (2000) reported that over 17 million ha of irrigated land occur in the western United States and many irrigation activities have persisted in the region for over 125 years (USACE 2010). Following extended periods of irrigation, all three factors used for wetland identification (i.e., hydrology, vegetation, and soils) can exhibit alteration (Environmental Laboratory 1987; USACE 2008; Summerford 2009).

Science And Literature Bucknell Review:

Science and Literature Harry Raphael Garvin, James M. Heath, 1983 Science on Stage Kirsten Shepherd-Barr, 2018-06-05 Science on Stage is the first full length study of the phenomenon of science plays theatrical events that weave scientific content into the plot lines of the drama The book investigates the tradition of science on the stage from the Renaissance to the present focusing in particular on the current wave of science playwriting Drawing on extensive interviews with playwrights and directors Kirsten Shepherd Barr discusses such works as Michael Frayn's Copenhagen and Tom Stoppard's Arcadia She asks questions such as What accounts for the surge of interest in putting science on the stage What areas of science seem most popular with playwrights and why How has the tradition evolved throughout the centuries What currents are defining it now And what are some of the debates and controversies surrounding the use of science on stage Organized by scientific themes the book examines selected contemporary plays that represent a merging of theatrical form and scientific content plays in which the science is literally enacted through the structure and performance of the play Beginning with a discussion of Christopher Marlowe's Doctor Faustus the book traces the history of how scientific ideas quantum mechanics and fractals for example are dealt with in theatrical presentations It discusses the relationship of science to society the role of science in our lives the complicated ethical considerations of science and the accuracy of the portrayal of science in the dramatic context The final chapter looks at some of the most recent and exciting developments in science playwriting that are taking the genre in innovative directions and challenging the audience's expectations of a science play The book includes a comprehensive annotated list of four centuries of science plays which will be useful for teachers students and general readers alike

Physics and Literature Aura Heydenreich, Klaus Mecke, 2021-12-20 Physics and Literature is a unique collaboration between physicists literary scholars and philosophers the first collection of essays to examine together how science and literature beneath their practical differences share core dimensions forms of questioning thinking discovering and communicating insights This book advances an in depth exploration of relations between physics and literature from both perspectives It turns around the tendency to discuss relations between literature and science in one sided and polarizing ways The collection is the result of the inaugural conference of ELINAS the Erlangen Center for Literature and Natural Science an initiative dedicated to building bridges between literary and scientific research ELINAS revitalizes discussion of science literature interconnections with new topics ideas and angles by organizing genuine dialogue among participants across disciplinary lines The essays explore how scientific thought and practices are conditioned by narrative and genre fiction models and metaphors and how science in turn feeds into the meaning making of literary and philosophical texts These interdisciplinary encounters enrich reflections on epistemology cognition and aesthetics

American Literature and Science Robert Scholnick, 2014-07-11 Literature and science are two disciplines often thought to be unrelated if not actually antagonistic But Robert J Scholnick points out that these areas of learning up through the beginning of the nineteenth century were understood as parts of a unitary endeavor By mid century they had diverged but literature and science have continued to interact conflict and illuminate each other In this innovative work twelve leaders in this emerging interdisciplinary field explore the long engagement of American writers with science and uncover science's conflicting meanings as a central dimension of the nation's conception of itself Reaching back to the Puritan poet minister physician Edward Taylor who wrote at the beginning of the scientific revolution and forward to Thomas Pynchon novelist of the cybernetic age this collection of original essays contains essential work on major writers including Franklin Jefferson Poe Emerson Thoreau Twain Hart Crane Dos Passos and Charles Olson Through its exploration of the ways that American writers have found in science and technology a vital imaginative stimulus even while resisting their destructive applications this book points towards a reconciliation and integration within culture An innovative look at a neglected dimension of our literary tradition American Literature and Science stands as both a definition of the field and an invitation to others to continue and extend new modes of inquiry
