Science and Providence John C. Polkinghorne, 2011-06-01 Internationally renowned priest scientist Dr John C Polkinghorne examines whether a personal interacting God is a credible concept in today's scientific age Encouraging the belief that there is a compatibility between the insights of science and the insights of religion this book previously published in the United Kingdom focuses on the viewpoint that the world is one in which both human beings and God have the freedom to act A modern understanding of the physical world is applied to questions of prayer and providence such as Do miracles happen Can prayer change anything Why does evil exist Why does God allow suffering Why does God need us to ask him God's involvement in time is considered from both a temporal and an eternal perspective The roles of incarnation and sacrament are discussed in terms of whether or not they have a credible place in today's worldview And the Final Anthropic Principle FAP is presented with its attempt at a physical eschatology showing it to be an inadequate basis for hope Real hope can reside only with God Polkinghorne concludes

Conjunctive Explanations in Science and Religion Diarmid A. Finnegan, David H. Glass, Mikael Leidenhag, David N. Livingstone, 2023-02-28 This book investigates the nature and relevance of conjunctive explanations in the context of science and religion It explores questions concerning how scientific and religious explanations for features of the world or phenomena within it relate to each other and whether they might work together in mutually enriching ways The chapters address topics including the relationship between Darwinian and teleological explanations non reductive explanations of

mind and consciousness and explanations of Christian faith and religious experience while others explore theological and philosophical issues concerning the nature and feasibility of conjunctive explanations Overall the contributions help to provide conceptual clarity on how scientific and religious explanations might or might not work together conjunctively as well as exploring how these ideas relate to specific topics in science and religion more generally *Philosophy, Science and Divine Action* F. LeRon Shults, Nancey C. Murphy, Robert John Russell, 2009-08-31 One of the most important and controversial themes in the contemporary dialogue among scientists and Christian theologians is the issue of divine action in the world This volume brings together contributions from leading scholars on this topic which emerged out of the Scientific Perspectives on Divine Action project co sponsored by the Vatican Observatory and the Center for Theology and Natural Science This multi year collaboration involved over 50 authors meeting at five international conferences The essays collected here demonstrate the pervasive role of philosophy in this dialogue Contributors include Ian Barbour Philip Clayton George F R Ellis Nancey Murphy Arthur Peacocke John Polkinghorne Robert John Russell F LeRon Shults William Stoeger Thomas F Tracy and Wesley Wildman **A Modern Relation of Theology and Science Assisted by Emergence and Kenosis** Bradford McCall, 2018-02-28 How should we attempt to understand the relationship between theology and science in the twenty first century In this book I will attempt to answer this question by examining several previous attempts to classify this relationship I also develop my personal view of the relation thereafter discussing some Catholic contributions to this project and then revisit some of my previously published material highlighting the role of panentheism therein and noting an emergent implication from the literature the resultant possibilities for God an implication that creates space for a broadly relational perspective of the process of emergence These movements allow me to argue that kenosis and emergence can add to the discussion of understanding the theology and science relationship Herein I advocate a monistic process based view of the overlapping relationship between theology and science **Science Discovers God** Ariel Adrean Roth, 2008 Does God exist Did a Master Designer create our universe or did life spontaneously evolve Can science retain objectivity in the search for truth while allowing for the possibility that God exists Does it make any difference Ariel A Roth scientist and Christian believer examines key issues related to the God question the intricate organization of matter in the universe the precision of the forces of physics the complexity of the eye and the brain the elaborate genetic code the disparity between the fossil record and the vast amount of time necessary for evolution Faced with so much evidence that seems to require a God in order to explain what we find in nature why does the scientific community remain silent about God Hypotheses and speculations that attempt to fit data into a predetermined conclusion abound What overriding influence prevents scientists from following the data of nature wherever it may lead *The Dialogical Spirit* Amos Yong, 2015-04-30 Contemporary proposals for Christian theology from post liberalism to Radical Orthodoxy and beyond have espoused their own methodological paradigms Those who have ventured into this domain of theological method however have usually had to

stake their claims vis a vis trends in what may be called the contemporary post al age whether of the post modern post Christendom post Enlightenment post Western or post colonial varieties This volume is unique among offerings in this arena in suggesting a way forward that engages on each of these fronts and does so from a particularistic Christian perspective without giving up on Christian theology s traditional claims to universality This is accomplished through the articulation of a distinctive dialogical methodology informed by both Pentecostalism and Evangelicalism one rooted in the Christian salvation history narrative of Incarnation and Pentecost that is yet open to the world in its many and various cultural ethnic religious and disciplinary discourses Amos Yong here engages with twelve different interlocutors representing different ecumenical religious and disciplinary perspectives The Dialogical Spirit thus not only proffers a model for Christian theological method suitable for the twenty first century global context but also exemplifies this methodological approach through its interactions across the contemporary scholarly inter religious and theological landscape

Expanding Humanity Vision Of God

Robert Herrmann,2009-08-15 How has our understanding of our world and our place in the universe changed in recent decades through the momentous discoveries of science Do recent developments in the philosophy of science which place limitations on scientific knowing provide a more level playing field This collection of essays and sermons which have not been readily available before address these thought provoking questions The John Templeton Foundation sponsored an essay and sermon contest to convey an expanded vision of God one that is informed by recent discoveries of science on the nature of the universe and the place we have in the world These selections are the winners of that competition The book is divided into three sections Contemporary Science Raising Theological Questions New Visions of Theology and Historical and Philosophical Perspectives on the Science Religion Dialogue The essays cover such areas as physics theology cosmology origins and artificial intelligence There is another way to conceive our life together There is another way to conceive of our life in God but it requires a different worldview not a clockwork universe in which individuals function as discrete springs and gears but one that looks more like a luminous web in which the whole is far more than the parts In this universe there is no such thing as an individual apart from his or her relationships Every interaction between people and people between people and things between things and things changes the face of history Life on earth cannot be reduced to four sure fire rules It is an ever unfolding mystery that defies precise prediction Meanwhile in this universe there is no such thing as parts The whole is the fundamental unit of reality Barbara Brown Taylor Physics and Faith
