Science And The Humanities:

Science and the Humanities Moody Erasmus Prior, 1971 Science and the Humanities Moody E. Prior, 2018-10-15
Science and the Humanities contains five lectures concerning the discussion of the relation of science and the humanities focusing on the work of thinkers such as James B Conant and C P Snow **Creating Consilience** Edward Slingerland, Mark Collard, 2012-01-19 Calls for a consilient or vertically integrated approach to the study of human mind and culture have for the most part been received by scholars in the humanities with either indifference or hostility One reason for this is that consilience has often been framed as bringing the study of humanistic issues into line with the study of non human phenomena rather than as something to which humanists and scientists contribute equally The other major reason that consilience has yet to catch on in the humanities is a dearth of compelling examples of the benefits of adopting a consilient approach Creating Consilience is the product of a workshop that brought together internationally renowned scholars from a variety of fields to address both of these issues It includes representative pieces from workshop speakers and participants that examine how adopting such a consilient stance informed by cognitive science and grounded in evolutionary theory would concretely impact specific topics in the humanities examining each topic in a manner that not only cuts across the humanities natural science divide but also across individual humanistic disciplines By taking seriously the fact that science humanities integration is a two way exchange this volume takes a new approach to bridging the cultures of science and the humanities The editors and contributors formulate how to develop a new shared framework of consilience beyond mere interdisciplinarity in a way that both sides can accept *Overcoming the Two Cultures* Richard E. Lee, Immanuel Maurice Wallerstein, Volkan Aytar, 2004 Explores the split between science and the humanities what caused it and the cultures that have grown out of it **Overcoming the Two Cultures** Richard E Lee Jr, Immanuel Wallerstein, 2015-12-03 This book tells the story of how the very idea of two cultures the so called divorce between science and the humanities was a creation of the modern world system The contributors working from a common research framework trace the divorce of facts and values as part of the transition from feudalism to capitalism This led to a polarization between universalist science and the particularist humanities and finally to the creation of the social sciences as an uneasy intermediary in this epistemological debate The book addresses the contemporary attempts to overcome the division between the two cultures that emerge from science feminism race and ethnic studies cultural studies and ecology ending with an analysis of the culture wars and the science wars Contributors Volkan Aytar Ay se Betul Celik Mauro Di Meglio Mark Frezzo Ho fung Hung Biray Kolloupglu K3 4rl3 4 Agustin Lao Montes Eric Mielants Boris Stremelin Sunaryo Norihisa Yamashita Deniz Yukeseker *Science Matters* Maria Burguete, 2008 All earnest and honest human quests for knowledge are efforts to understand Nature which includes both human and nonhuman systems the objects of study in science Thus broadly speaking all these quests are in the science domain The methods and tools used may be different for example the literary people use mainly their bodily sensors and their

brain as the information processor while natural scientists may use in addition measuring instruments and computers Yet all these activities could be viewed in a unified perspective OCo they are scientific developments at varying stages of maturity and have a lot to learn from each other That OC everything in Nature is part of scienceOCO was well recognized by Aristotle da Vinci and many others Yet it is only recently with the advent of modern science and experiences gathered in the study of statistical physics complex systems and other disciplines that we know how the human related disciplines can be studied scientifically Science Matters is about all human dependent knowledge wherein humans the material system of Homo sapiens are studied scientifically from the perspective of complex systems It includes all the topics covered in the humanities and social sciences Containing contributions from knowledgeable humanists social scientists and physicists the book is intended for those OCo from artists to scientists OCo who are curious about the world and are interested in understanding it with a unified perspective

The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Board on Higher Education and Workforce, Committee on Integrating Higher Education in the Arts, Humanities, Sciences, Engineering, and Medicine, 2018-07-21 In the United States broad study in an array of different disciplines arts humanities science mathematics engineering as well as an in depth study within a special area of interest have been defining characteristics of a higher education But over time in depth study in a major discipline has come to dominate the curricula at many institutions This evolution of the curriculum has been driven in part by increasing specialization in the academic disciplines There is little doubt that disciplinary specialization has helped produce many of the achievement of the past century Researchers in all academic disciplines have been able to delve more deeply into their areas of expertise grappling with ever more specialized and fundamental problems Yet today many leaders scholars parents and students are asking whether higher education has moved too far from its integrative tradition towards an approach heavily rooted in disciplinary silos These silos represent what many see as an artificial separation of academic disciplines This study reflects a growing concern that the approach to higher education that favors disciplinary specialization is poorly calibrated to the challenges and opportunities of our time The Integration of the Humanities and Arts with Sciences Engineering and Medicine in Higher Education examines the evidence behind the assertion that educational programs that mutually integrate learning experiences in the humanities and arts with science technology engineering mathematics and medicine STEMM lead to improved educational and career outcomes for undergraduate and graduate students It explores evidence regarding the value of integrating more STEMM curricula and labs into the academic programs of students majoring in the humanities and arts and evidence regarding the value of integrating curricula and experiences in the arts and humanities into college and university STEMM education programs
