Janes,R. Stall,S.M. Gifford,2012-12-06 Over the past two decades increasing interest has emerged in the contributions that the social sciences might make to the epidemiological study of patterns of health and disease Several reasons can be cited for this increasing interest Primary among these has been the rise of the chronic non infectious diseases as important causes of morbidity and mortality within Western populations during the 20th century Generally speaking the chronic non infectious diseases are strongly influenced by lifestyle variables which are themselves strongly influenced by social and cultural forces The understanding of the effects of the behavioral factors in say hypertension thus requires an understanding of the social and cultural factors which encourage obesity a sedentary lifestyle non compliance with anti hypertensive medications or other prescribed regimens and stress Equally there is a growing awareness that considerations of human behavior and its social and cultural determinants are important for understanding the distribution and control of infectious diseases Related to this expansion of epidemiologic interest into the behavioral realm has been the development of etiological models which focus on the psychological biological and socio cultural characteristics of hosts rather than exclusive concern with exposure to a particular agent or even behavioral risk Also during this period advances in statistical and computing techniques have made accessible the ready testing of multivariate causal models and so have encouraged the measurement of the effects of social and cultural factors on disease occurrence Culture and Cognition Ronald Schleifer,Robert Con Davis,Nancy Mergler,2019-03-15 This groundbreaking book challenges the disciplinary boundaries that have traditionally separated scientific inquiry from literary inquiry It explores scientific knowledge in three subject areas the natural history of aging literary narrative and psychoanalysis In the authors view the different perspectives on cognition afforded by Anglo American cognitive science Greimassian semiotics and Lacanian psychoanalysis help us to redefine our very notion of culture Part I historically situates the concepts of meaning and truth in twentieth century semiotic theory and cognitive science Part II

contrasts the modes of Freudian case history to the general instance of Einstein's relativity theory and then sets forth a rhetoric of narrative based on the discourse of the aged Part III examines in the context of literary studies an interdisciplinary concept of cultural cognition Culture and Cognition will be essential reading for literary theorists historians and philosophers of science semioticians and scholars and students of cultural studies the sociology of literature and science and literature
