

The background of the cover is a reproduction of Raphael's 'The School of Athens'. Plato is depicted in the upper left, holding a book aloft with his right hand. The book's pages show a diagram of a sphere with lines and a small figure. Aristotle is seated in the lower right, holding a book in his left hand and gesturing with his right. The overall color palette is dark, with the red of Plato's robe and Aristotle's garment providing a focal point.

Science Of Art Optical Themes In Western:

The Science of Art; Optical Themes in Western Art from Brunelleschi to Seurat Martin Kemp, 1990 *The Art of Science* Rossella Lupacchini, Annarita Angelini, 2014-07-22 In addition to linear perspective complex numbers and probability were notable discoveries of the Renaissance While the power of perspective which transformed Renaissance art was quickly recognized the scientific establishment treated both complex numbers and probability with much suspicion It was only in the twentieth century that quantum theory showed how probability might be molded from complex numbers and defined the notion of complex probability amplitude From a theoretical point of view however the space opened to painting by linear perspective and that opened to science by complex numbers share significant characteristics The Art of Science explores this shared field with the purpose of extending Leonardo's vision of painting to issues of mathematics and encouraging the reader to see science as an art The intention is to restore a visual dimension to mathematical sciences an element dulled if not obscured by historians philosophers and scientists themselves *The Spiritual Language of Art: Medieval Christian Themes in Writings on Art of the Italian Renaissance* Steven F.H. Stowell, 2014-11-13 Analyzing the literature on art from the fifteenth and sixteenth centuries The Spiritual Language of Art explores the complex relationship between visual art and spiritual experiences during the Italian Renaissance Though scholarly research on these writings has predominantly focused on the influence of classical literature this study reveals that Renaissance authors consistently discussed art using terms concepts and metaphors derived from spiritual literature By examining these texts in the light of medieval sources greater insight is gained on the spiritual nature of the artist's process and the reception of art Offering a close re readings of many important writers Alberti Leonardo Vasari etc this study deepens our understanding of attitudes toward art and spirituality in the Italian Renaissance *Geographies of Nineteenth-Century Science* David N. Livingstone, Charles W. J. Withers, 2011-12-01 In *Geographies of Nineteenth Century Science* David N Livingstone and Charles W J Withers gather essays that deftly navigate the spaces of science in this significant period and reveal how each is embedded in wider systems of meaning authority and identity Chapters from a distinguished range of contributors explore the places of creation the paths of knowledge transmission and reception and the import of exchange networks at various scales Studies range from the inspection of the places of London science which show how different scientific sites operated different moral and epistemic economies to the scrutiny of the ways in which the museum space of the Smithsonian Institution and the expansive space of the American West produced science and framed geographical understanding This volume makes clear that the science of this era varied in its constitution and reputation in relation to place and personnel in its nature by virtue of its different epistemic practices in its audiences and in the ways in which it was put to work **Design and Science** Leslie Atzmon, 2023-01-12 *Design and Science* addresses the inter relationship in both historical and contemporary contexts between design thinking and design processes and scientific and medical research methods Contributors address the

parallels between research methodologies in design and the sciences both of which involve the recognition of an issue conceptualisation of ways to resolve it and then the modelling and implementation of a viable solution Much research across various scientific disciplines follows a similar pattern Thematic sections explore visualisation visual narrative and visual metaphor biodesign and biomimicry makers and users in design and science and data visualisation discussing the role of data from nature as an ultimate source of design

Space-Time Geometries for Motion and Perception in the Brain and the Arts Tamar Flash, Alain Berthoz, 2021-01-04 This book is based on a two day symposium at the Paris Institute of Advanced Study titled space time geometries and movement in the brain and the arts It includes over 20 chapters written by the leading scientists and artists who presented their related research studies at the symposium and includes six sections the first three focus on space time geometries in perception action and memory while the last three focus on specific artistic domains drawing and painting dance music digital arts and robotics The book is accompanied by a dedicated webpage including related images and videos There is an ever growing interest in the topics covered by this book Space and time are of fundamental importance for our understanding of human perception action memory and cognition and are entities which are equally important in physics biology neuroscience and psychology Highly prominent scientists and mathematicians have expressed their belief that our bodies and minds shape the ways we perceive space and time and the physical laws we formulate Understanding how the brain perceives motion and generates bodily movements is of great significance There is also growing interest in studying how space time and movement subserve artistic creations in different artistic modalities e g fine arts digital and performing arts and music This interest is inspired by the idea that artists make intuitive use of the principles and simplifying strategies used by the brain in movement generation and perception Building upon new understanding of the spatio temporal geometries subserving movement generation and perception by the brain we can start exploring how artists make use of such neuro geometrical and neuro dynamic representations in order to express artistic concepts and emotionally affect the human observers and listeners Scientists have also started formulating new ideas of how aesthetic judgements emerge from the principles and brain mechanisms subserving motor control and motion perception Covering novel and multidisciplinary topics this advanced book will be of interest to neuroscientists behavioral scientists artificial intelligence and robotics experts students and artists

Science in the Age of Baroque Ofer Gal, Raz Chen-Morris, 2012-11-28 This volume examines the New Science of the 17th century in the context of Baroque culture analysing its emergence as an integral part of the high culture of the period The collected essays explore themes common to the new practices of knowledge production and the rapidly changing culture surrounding them as well as the obsessions anxieties and aspirations they share such as the foundations of order the power and peril of mediation and the conflation of the natural and the artificial The essays also take on the historiographical issues involved the characterization of culture in general and culture of knowledge in particular the use of generalizations like Baroque and the status of such categories and

the role of these in untangling the historical complexities of the tumultuous 17th century The canonical protagonists of the Scientific Revolution are considered and so are some obscure and suppressed figures Galileo side by side with Scheiner Torricelli together with Kircher Newton as well as Scilla The coupling of Baroque and Science defies both the still triumphalist historiographies of the Scientific Revolution and the slight embarrassment that the Baroque represents for most cultural national histories of Western Europe It signals a methodological interest in tensions and dilemmas rather than self affirming narratives of success and failure and provides an opportunity for reflective critique of our historical categories which is valuable in its own right

Visual Cultures in Science and Technology Klaus Hentschel, 2014 This book aims to provide a synthesis of the history generation use and transfer of images in scientific practice It delves into the rich reservoir of case studies on visual representations in scientific and technological practice that have accumulated over the past couple of decades by historians sociologists and philosophers of science The main aim is thus located on the meta level It adopts an integrative view of recurrently noted general features of visual cultures in science and technology something hitherto unachieved and believed by many to be a mission impossible By systematic comparison of numerous case studies the purview broadens away from myopic microanalysis in search of overriding patterns The many different disciplines and research areas involved encompass mathematics technology natural history medicine the geosciences astronomy chemistry and physics The chosen examples span the period from the Renaissance to the late 20th century The broad range of visual representations in scientific practice is treated as well as schooling in pattern recognition design and implementation of visual devices and a narrowing in on the special role of illustrators and image specialists

Atlas, or the Anxious Gay Science Georges Didi-Huberman, Shane B. Lillis, 2018-10-11 Aby Warburg's Mnemosyne Atlas 1925-1929 is a prescient work of mixed media assemblage made up of hundreds of images culled from antiquity to the Renaissance and arranged into startling juxtapositions Warburg's allusive atlas sought to illuminate the pains of his final years after he had suffered a breakdown and been institutionalized It continues to influence contemporary artists today including Gerhard Richter and Mark Dion In this illustrated exploration of Warburg and his great work Georges Didi Huberman leaps from Mnemosyne Atlas into a set of musings on the relation between suffering and knowledge in Western thought and on the creative results of associative thinking Deploying writing that delights in dramatic jump cuts reminiscent of Warburg's idiosyncratic juxtapositions and drawing on a set of sources that ranges from ancient Babylon to Walter Benjamin Atlas or the Anxious Gay Science is rich in Didi Huberman's trademark combination of élan and insight
