Applied Science ,1912 A Brief Illustrated History of Machines and Mechanisms Emilio Bautista Paz,Marco Ceccarelli,Javier Echávarri Otero,José Luis Muñoz Sanz,2010-08-02 Machines have always gone hand in hand with the cultural development of mankind throughout time A book on the history of machines is nothing more than a specific way of bringing light to human events as a whole in order to highlight some significant milestones in the progress of knowledge by a complementary perspective into a general historical overview This book is the result of common efforts and interests by several scholars teachers and students on subjects that are connected with the theory of machines and mechanisms In fact in this book there is a certain teaching aim in addition to a general historical view that is more addressed to the achievements by homo faber than to those by homo sapiens since the proposed history survey has been developed with an engineering approach The brevity of the text added to the fact that the authors are probably not content to tackle historical studies with the necessary rigor means the content of the book is inevitably incomplete but it nevertheless attempts to fulfil three basic aims First it is hoped that this book may provide a stimulus to promote interest in the study of technical history within a mechanical engineering context Few are the countries where anything significant is done in this area which means there is a general lack of knowledge of this common cultural heritage
