Cornelis van Kooten,2012-08-30 This volume enables readers to understand the complexity associated with climate change policy and the science behind it For example the author describes the criticism and defense of the widely known hockey stick temperature graph derived from combining instrumental data and proxy temperature indications using tree ring ice core and other paleoclimatic data Readers will also learn that global warming cannot easily be avoided by reducing CO2 and other greenhouse gas emissions in rich countries Not only is emissions reduction extremely difficult in rich countries but demands such as the UN mandate to improve the lives of the poorest global citizens cannot be satisfied without significantly increasing global energy use and CO2 emissions Therefore the author asserts that climate engineering and adaptation are preferable to mitigation particularly since the science is less than adequate for making firm statements about the Earth s future climate Readers will also learn that global warming cannot easily be avoided by reducing CO2 and other greenhouse gas emissions in rich countries Not only is emissions reduction extremely difficult in rich countries but demands such as the UN mandate to improve the lives of the poorest global citizens cannot be satisfied without significantly increasing global energy use and CO2 emissions Therefore the author asserts that climate engineering and adaptation are preferable to mitigation particularly since the science is less than adequate for making firm statements about the Earth s future climate Science, Technology, and Society Sal P. Science and National Consciousness in Bengal J. Lourdasamy,2004 This book gives a flavour of the Indian response to modern science by analysing the lives and careers of four scientifically influential personalities in Bengal His analysis of the careers of two scientists J C Bose and P C Ray and two institution builders Mahendralal Sircar and Asutosh Mookerjee

brings to light the issues related to science at a time of colonialism and nationalism Scientists often had to depend on British institutions for legitimation and funding while also supporting the nationalist cause for greater autonomy One of the central claims of this book is that the protagonists aimed to contribute to a modern world science one based on a strong sense of universalism They did not aim to construct any alternative sciences though they did express and apply their work by drawing on their cultural heritage This makes *Science and National Consciousness* a work of particular relevance today when a homogenous instrumentalist and totally Western conception of science is being globally accepted Science Patricia Fara, 2010-02-11 *Science A Four Thousand Year History* rewrites science's past Instead of focussing on difficult experiments and abstract theories Patricia Fara shows how science has always belonged to the practical world of war politics and business Rather than glorifying scientists as idealized heroes she tells true stories about real people men and some women who needed to earn their living who made mistakes and who trampled down their rivals in their quest for success Fara sweeps through the centuries from ancient Babylon right up to the latest hi tech experiments in genetics and particle physics illuminating the financial interests imperial ambitions and publishing enterprises that have made science the powerful global phenomenon that it is today She also ranges internationally illustrating the importance of scientific projects based around the world from China to the Islamic empire as well as the more familiar tale of science in Europe from Copernicus to Charles Darwin and beyond Above all this four thousand year history challenges scientific supremacy arguing controversially that science is successful not because it is always right but because people have said that it is right
