©2014 by Linda Ward Beech, Scholastic Teaching Resources

Energy

- Energy is the ability to do work or move an object with force.
- Sound moves the air (or matter) around us.
- Sound occurs when an object is vibrated by force.
- Sound is a type of energy.

Vibration

For sound to be produced, an object (or matter) needs to be vibrated or moved by a force.

Sound Waves

The initial force used to make a sound vibrates the matter surrounding it in a chain reaction and creating waves.

How Are Sounds Different from Each Other?

Sounds can have different pitches, frequencies, amplitudes, or wavelengths, so they sound different to our ears.

How We Hear Sound

The vibrations caused by the initial object being vibrated reach our eardrums. In comparison with our natural ear drums, our eardrums let us know that we hear a sound.

Department of Printed Books,1902 Time Will Tell Mari Riess Jones,2019 Attention is a central concept in psychology The term attention itself has persisted even though it implies a static insulated capacity that we use when it is necessary to focus upon some relevant or stimulating event Riess Jones presents a different way of thinking about attention one that describes it as a continuous activity that is based on energy fluctuating in time A majority of attention research fails to examine influence of event time structure i e a speech utterance on listeners moment to moment attending General research ignores listeners endowed with innate as well as acquired temporal biases Here attending is portrayed as a dynamic interaction of an individual within his or her surroundings Importantly this interaction involves synchronicity between an attender and external events This emphasis on time and synchronicity distinguishes the author s theory called Dynamic Attending Theory DAT from other approaches to attending which characterize attention metaphorically as a filter resource pool spotlight and so on Recent research from neuroscience has lent support to Riess Jones theory and the goal of this book is to bring this new research as well as her own to the wide audience of psychologists interested in attention more broadly
