May 27, 2020

When you think of the word 'science' do you automatically picture someone mixing chemicals in a lab or looking through a telescope at the night sky? These are certainly activities that scientists participate in, but science is so much more than this!

In fact, science refers to many different fields for 'knowledge'-biology from Latin, chemistry, and physics are just a few, but so are sociology, psychology, and anthropology! All of this exists in life sciences, physical sciences , social sciences, food sciences, and agriculture. That list goes on, continues and continues.

As you can see, you are every day surrounded by science. Engineers have designed those smartphones you use to write to your friends, agronomists are studying the soil in which your vegetables grow, and doctors are conducting tests to diagnose the diseases or pains you might have. And because science is embedded in our everyday lives in so many ways, you can probably imagine it's having significant impacts on our lives and cultures.
