Science, Technology, and Everyday Life, 1870-1950 Colin Chant, Richard Bessel, 1989 Eloquent Spaces adopts the twin analytic of meaning and community to write a fresh history of building in early India It presents a new perspective on the principles and practices of early Indian architecture Defining it broadly over a range of space uses the book argues for architecture as a form of cultural production as well as public consumption Ten essays by leading archaeologists architects historians and philosophers examining different architectural sites and landscapes including Sanchi Moodabidri Srinagar Chidambaram Patan Konark Basgo and Puri demonstrate the need to look beyond the built form to its spirit beyond aesthetics to cognition and thereby to integrating architecture with its myriad living contexts The volume captures some of the semantic diversity inherent in premodern Indian traditions of civic building both sacred and secular which were however unified in their insistence on enacting meaning and a transcendent validity over and above utility and beauty of form The book is a quest for a culturally rooted architecture as an alternative to the growing crisis of disembeddedness that informs modern praxis This volume will be of interest to scholars and practitioners of architecture ancient Indian history philosophy art history and cultural studies

Transforming the Countryside Paul Brassley, Jeremy Burchardt, Karen Sayer, 2016-11-25 It is now almost impossible to conceive of life in western Europe either in the towns or the countryside without a reliable mains electricity supply By 1938 two thirds of rural dwellings had been connected to a centrally generated supply but the majority of farms in Britain were not linked to the mains until sometime between 1950 and 1970 Given the significance of electricity for modern life the difficulties of supplying it to isolated communities and the parallels with current discussions over the provision of high speed broadband connections it is surprising that until now there has been little academic discussion of this vast and protracted undertaking This book fills that gap It is divided into three parts The first on the progress of electrification explores the timing and extent of electrification in rural England Wales and Scotland the second examines the effects of electrification on rural life and the rural landscape and the third makes comparisons over space and time looking at electrification in Canada and Sweden and comparing electrification with the current problems of rural broadband
