

class, has the lightest displacement of the new boats, but she also has the finest waterline.

There is one matter which, in the writer's opinion, has been very clearly demonstrated by the workings of the rule, and that is the necessity of subdivision into large and small boats. Boats, say, under 30-foot waterline, to be measured and classified in a different manner. Boats under this size really cannot be considered cruising boats, and for racing, pure and simple, a faster boat can be built for the same cost if the designers are not hampered by the restrictions of the new rule. For instance, the "Q" boats, which rate 22 feet under the new rule and measure really 20 feet on the waterline, cost in the neighborhood of \$2,500, and are very little faster than the 21-foot raceabouts costing \$1,600. "Q" boats would carry about 800 feet of sail and 3,000 pounds of ballast, against 600 feet of sail and 3,200 pounds of ballast in the raceabouts. Raceabouts would rate, however, between

23 and 25. In the larger class, however, the workings have all been for the good of the sport. All the vessels built have been in the direction of wholesome ships. The only drawback has been that, owing to the absence of scantling restrictions, at least one of the prominent larger sloops has been built in a more flimsy manner than any previous racing boat. This, however, is a matter which is recognized, and will be met by future legislation.

NO FEAR OF EXTREMITIES OF DESIGN.

By Henry J. Gicklow.

WE will start upon the season of 1907 with many new boats embodying a refinement of design in yachts built in 1906 under the uniform rule of measurement. Fears expressed late last year of the new rating being so construed as to produce extremities of design in the next season will not be realized. Progress in applying the new
