Science Of Vision:

Science of Vision K.N. Leibovic, 2012-12-06 Converging lines of biological perceptual and theoretical approaches are brought together in *The Science of Vision* to give a new perspective on the brain sciences and vision in particular. The book contains contributions from experts in the fields of biophysics, physiology, psychology, and computation. While reviewing some basic knowledge, it mainly presents fresh ideas and includes some new results. The topics range from cells through perception to neurocomputing and are treated in depth, taking the specialist to the frontiers of research. At the same time, the book is written in a manner understandable to the nonspecialist, in keeping with the multidisciplinary appeal of the subject. A glossary of terms also makes the book easy to read. In our age of specialization, this integrated approach is a welcome addition to the literature, which will further interdisciplinary research and shed new light on the vision sciences. **Competition Science**
