Science Rules Peter Achinstein, 2004-09-24 Included is a famous nineteenth century debate about scientific reasoning between the hypothetico deductivist William Whewell and the inductivist John Stuart Mill and an account of the realism antirealism dispute about unobservables in science with a consideration of Perrin's argument for the existence of molecules in the early twentieth century

Sacred Texts and Paradigmatic Revolutions J. David Stark, 2014-01-16 This volume applies a rhetorical discourse method to the Yahadic manuscripts and Romans to show how community leaders uniquely determined specific hermeneutical rules axioms and paradigms for their communities Stark examines the Yahadic texts using Thomas Kuhn's arguments about scientific paradigms and their shifts as a framework for considering the patterns through which Paul and the Yahad interpret their scriptures Stark outlines the three ways in which the Teacher determined the perspective from which the Yahad approached its scriptures Following this he analyses the Romans and the three thematic ways that Jesus determined the perspective from which Paul approached his scriptures Despite strong similarities between them the paradigms under which the Yahad and Paul operated moved them to fundamentally different understanding of the kinds of faithfulness they should exhibit towards those whom they received as Yahweh's appointed agents The Yahad understood faithfulness to the Teacher within the context of Torah but Paul understood the Torah within the context of Abraham style faithfulness to Jesus

Traditions of Analysis and Synthesis William R. Newman, Jutta Schickore, 2024-12-23 This open access book provides a fresh perspective on analysis and synthesis across several areas of inquiry The two operations form a primary basis of modern laboratory science ranging from the spectrographic analysis used in practically every scientific discipline today to the naming of entire disciplines such as synthetic organic chemistry Despite their acknowledged significance however the history of analysis synthesis and their relations over the longue dur e is poorly understood Several volumes have been devoted to the history of analysis and synthesis in the sense that premodern mathematicians and philosophers used the terms but very little work has been done on the tradition of material decomposition and recomposition and its relationship to mathematics and philosophy The present volume brings together scholars in the history of medicine mathematics philosophy chemistry and alchemy to explore the ways in which these multiple disciplines understood and used analysis and synthesis as experimental justificatory and conceptual tools

Integrating History and Philosophy of Science Seymour Mauskopf, Tad Schmaltz, 2011-09-06 Though the publication of Kuhn's *Structure of Scientific Revolutions* seemed to herald the advent of a unified study of the history and philosophy of science it is a hard fact that history of science and philosophy of science have increasingly grown apart

Recently however there has been a series of workshops on both sides of the Atlantic called HPS intended to bring historians and philosophers of science together to discuss new integrative approaches This is therefore an especially appropriate time to explore the problems with and prospects for integrating history and philosophy of science The original essays in this volume all from specialists in the history of science or philosophy of science offer such an exploration from a wide variety of perspectives The volume combines general reflections on the current state of history and philosophy of science with studies of the relation between the two disciplines in specific historical and scientific cases

State of Affairs Richard J Coleman, 2015-03-26 The last sixty years have witnessed a virtual explosion of interest in how modern science and traditional Christianity intersect This new rapprochement with science has irrevocably altered how Christians think of God providing a foundation from which we cannot retreat but from which we also cannot move forward until we examine the presumptions on which it is based For the first time Richard J Coleman interprets in a clear and meaningful way the themes and practitioners that make this rapprochement different and what it has achieved But this book is more than description it is an inquiry into whether Christian theology has lost its authentic voice by its singular focus on accommodating modern science

possession of information learned through experience and can be understood as a cognitive success or an epistemic contact with reality like making a discovery Knowledge is often understood as a state of an individual person but it can also refer to a characteristic of a group of people as group knowledge social knowledge or collective knowledge Some social sciences understand knowledge as a broad social phenomenon that is similar to culture Knowledge is closely related to intelligence but intelligence is more about the ability to acquire process and apply information while knowledge concerns information and skills that a person already possess Knowledge can be produced in many ways The main source of empirical knowledge is perception which involves the usage of the senses to learn about the external world Introspection allows people to learn about their internal mental states and processes Other sources of knowledge include memory rational intuition inference and testimony According to foundationalism some of these sources are basic in that they can justify beliefs without depending on other mental states Coherentists reject this claim and contend that a sufficient degree of coherence among all the mental states of the believer is necessary for knowledge According to infinitism an infinite chain of beliefs is needed
