

The Navy and Its Third Century

J. L. HOLLOWAY III, U.S.N.
Chief of Naval Operations

Admiral Geiger, ladies, and gentlemen. It is an honor to be invited to address so distinguished a gathering. The Navy, if it is to carry out its mission successfully, is dependent upon technology. And the advanced technology upon which we rely is born of research. A former Secretary of the Navy put it very well when he said, "It is of little service to the nation to have any Navy at all unless it is a fair expression of the highest scientific resources of its day." Written in 1885, that statement is no less true in 1976.

It should come as no surprise that today I would like to talk to you about the Navy—to take a bearing on where we are and to indulge in a little crystal-ball gazing to assess where we are going.

At no time since World War II has the role of the United States Navy been more important to our national defense than it is today. The military strategy of this country is a forward strategy. It is overseas-oriented. North America is an island continent. One of our states, all of our territories, and 41 of our 43 allies lie overseas. Our forward strategy can best be described as one in which we use the oceans as barriers in our defense and as avenues for extending our influence abroad to those areas of the world in which we have interests.

Simply stated, the mission of our Navy is to conduct prompt and sustained combat operations at sea in support of our national interests. To carry out this mission the Navy needs ships, aircraft, and people. We need ships and aircraft individually capable of coping with the weapons systems technology that they may face in future battles and competent and professional people who can maintain and operate those ships and aircraft to the limit of their design capabilities. We must have enough of those ships, aircraft, and people to constitute a fleet, which, in coordination with our other services and in combination with our allies, can defeat the total maritime forces of our potential adversaries.

Our fleets must be offensively powerful enough to defeat the enemy forces routinely present in their theater of operations, strong enough to defend

against attacks by long-range aircraft, and able to project power ashore in support of our allies and our forces. Our fleets also require a high degree of logistic independence from overseas bases.

A balanced fleet is necessary to give our Navy these capabilities. There must be balance among types: carriers, surface combatants, submarines, amphibious forces, and support ships. There must also be, within a limited budget, balance between those very capable multipurpose ships such as carriers and cruisers, which are relatively expensive, and the single-purpose vessels, which, being less costly, can be procured in larger quantities and so provide our fleet with the density of force it needs to be effective on a worldwide basis.

As for nuclear propulsion in our ships, our policy is straightforward and designed to support a limited but fundamental exploitation of the advantages of nuclear propulsion within the overall requirements of our naval strategy. This policy states that all submarines should be nuclear powered, because with nuclear power the submarine attains the ultimate capabilities of the true submersible. Among surface combatants, only carriers and cruisers should be nuclear powered, and only enough of these to constitute a strategically significant segment of the U.S. operating forces. This would amount to five or six all-nuclear-powered task forces, each consisting of a carrier, two to four cruisers, and one to three submarines. These all-nuclear-powered task forces would have the ability to steam unlimited distances at high speeds, without the necessity to refuel, replenish, or rearm, and arrive at a crisis point ready to conduct combat operations for a sustained period of time, until the crisis is resolved or conventional forces with logistic support arrive. Three of these task forces in the Atlantic Fleet, for example, would permit one to be forward-deployed at all times, one to be combat ready based on the U.S. East Coast, and the third to be in maintenance.

Today the United States Navy must carry out its undiminished responsibilities with the fewest ships in
