**E-Commerce and Intelligent Methods** Javier Segovia, Piotr S. Szczepaniak, Marian Niedzwiedzinski, 2013-06-05. This book covers significant recent developments in the field of Intelligent Methods applied to e-commerce. The Intelligent Methods considered are mainly Soft Computing Methods that include fuzzy sets, rough sets, neural networks, evolutionary computations, probabilistic and evidential reasoning, multivalued logic, and related fields. There is no doubt about the relevance of e-commerce in our daily environments and in the work carried out at many research centers throughout the world. The application of AI to Commerce is growing as fast as the computers and networks are being integrated in all business and commerce aspects. We felt that it was time to sit down and see how the impact into that field of low-level AI, i.e., soft computing. We found many scattered contributions disseminated in conferences, workshops, journal books, or even technical reports, but nothing like a common framework that could serve as a basis for further research, comparison, or even prototyping for a direct transfer to the industry. We felt then the need to set up a reference point, a book like this. We planned this book as a recompilation of the newest developments of researchers who already made some contribution into the field. The authors were selected based on the originality and quality of their work and its relevance to the field. Authors came from prestigious universities and research centers with different backgrounds.

**Legal Certainty in a Contemporary Context** Mark Fenwick, Stefan Wróblewski, 2016-04-02 This book addresses issues concerning the shifting contemporary meaning of legal certainty The book focuses on exploring the emerging tensions that exist between the demand for legal certainty and the challenges of regulating complex late modern societies The book is divided into two parts the first part focusing on debates around legal certainty at the national level with a primary emphasis on criminal law and the second part focusing on debates at the transnational level with a primary emphasis on the regulation of transnational commercial transactions In the context of legal modernity the principle of legal certainty the idea that the law must be sufficiently clear to provide those subject to legal norms with the means to regulate their own conduct and to protect against the arbitrary use of public power has operated as a foundational rule of law value Even though it has not always been fully realized legal certainty has functioned as a core value and aspiration that has structured normative debates

throughout political modernity both at a national and international level In recent decades however legal certainty has come under increasing pressure from a number of competing demands that are made of contemporary law in particular the demand that the law be more flexible and responsive to a social environment characterized by rapid social and technological change The expectation that the law operates in new transnational contexts and regulates every widening sphere of social life has created a new degree of uncertainty and this change raises difficult questions regarding both the possibility and desirability of legal certainty This book compiles in one edited volume research from a range of substantive areas of civil and criminal law that shares a common interest in understanding the multi layered challenges of defining legal certainty in a late modern society The book will be of interest both to lawyers interested in understanding the transformation of core rule of law values in the context of contemporary social change and to political scientists and social theorists

*Contract Law in Electronic Commerce* Ralf Holthöfer,2001-01-31 Inhaltsangabe Abstract This paper was written during my studies at Georgia State University Atlanta in Fall 2000 in the context of an exchange program between Georgia State University and Technische Universit t Darmstadt Its subject is the new contract law in electronic commerce The paper starts with an illustration of the situation of legal uncertainty prior to the establishment of a specific contract law in electronic commerce Many laws governing contract formation were drafted before the existence of electronic messaging and did not adequately address the challenges of electronic transactions Furthermore electronic transactions were often hindered by the diversity of state laws This situation was considered to place some severe legal obstacles to the development of electronic commerce In 1997 President Clinton and Vice President Gore unveiled their Framework for Global Electronic Commerce This issue defined the main goals for the future development of both domestic and global electronic commerce The general objective was to establish a Uniform Commercial Code for this ascending sector of commerce in order to facilitate and enforce electronic transactions The legislative efforts to achieve those goals recently resulted in two uniform acts the

Uniform Computer Information Transactions Act UCITA and the Uniform Electronic Transactions Act UETA and the federal Electronic Signatures in Global and National Commerce Act E sign Act The paper deals with these new legislative approaches Aside from the presentation of the scopes of the different acts the paper focuses on their fundamental principles and major provisions Furthermore it discusses the new enactments in the context of a selection of fundamental legal issues raised by electronic commerce This discussion finally shows that although there have been a number of serious endeavors to achieve the above mentioned goals by drafting several electronic commerce statutes the recent enactments relating to contract law in electronic commerce are not able to achieve the goals set out in the Framework for Global Electronic Commerce There still remain significant legal obstacles that prohibit electronic commerce from reaching its full potential
