Selected Papers of Morikazu Toda Morikazu Toda,Miki Wadati,1993 This volume contains selected papers of Dr Morikazu Toda The papers are arranged in chronological order of publishing dates Among Dr Toda s many contributions his works on liquids and nonlinear lattice dynamics should be mentioned The one dimensional lattice where nearest neighboring particles interact through an exponential potential is called the Toda lattice which is a miracle and indeed a jewel in theoretical physics The papers in this volume can be grouped into five subjects statistical mechanics theory of liquids and solutions lattice dynamics Toda lattice and soliton theory and its applications     *Selected Papers Of Morikazu Toda* Miki

## **Soliton Equations and Their Algebro-Geometric Solutions: Volume 2, (1+1)-Dimensional Discrete Models**

Fritz Gesztesy,Helge Holden,Johanna Michor,Gerald Teschl,2008-09-04 As a partner to Volume 1 Dimensional Continuous Models this monograph provides a self contained introduction to algebro geometric solutions of completely integrable nonlinear partial differential difference equations also known as soliton equations The systems studied in this volume include the Toda lattice hierarchy the Kac van Moerbeke hierarchy and the Ablowitz Ladik hierarchy An extensive treatment of the class of algebro geometric solutions in the stationary as well as time dependent contexts is provided The theory presented includes trace formulas algebro geometric initial value problems Baker Akhiezer functions and theta function representations of all relevant quantities involved The book uses basic techniques from the theory of difference equations and spectral analysis some elements of algebraic geometry and especially the theory of compact Riemann surfaces The presentation is constructive and rigorous with ample background material provided in various appendices Detailed notes for each chapter together with an exhaustive bibliography enhance understanding of the main results

## **Elements of Statistical Mechanics**

D. ter Haar,1995-04-06 Following the Boltzmann Gibbs approach to statistical mechanics this new edition of Dr ter Haar s important textbook Elements of Statistical Mechanics provides undergraduates and more senior academics with a thorough introduction to the subject Each chapter is followed by a problem section and detailed bibliography The first six chapters of the book provide a thorough introduction to the basic methods of statistical mechanics and indeed the first four may be used as an introductory course in themselves The last three chapters offer more detail on the equation of state with special emphasis on the van der Waals gas the second quantisation approach to many body systems with an examination of two time temperature dependent Green functions phase transitions including various approximation

methods for treating the Ising model a brief discussion of the exact solution of the two dimensional square Ising model and short introductions to renormalisation group methods and the Yang and Lee theory of phase transitions In the problem section which follows each chapter the reader is asked to complete proofs of basic theory and to apply that theory to various physical situations Each chapter bibliography includes papers which are of historical interest A further help to the reader are the solutions to selected problems which appear at the end of the book   **Mathematical Reviews** ,1996   Proceedings of the Japan Academy Nihon Gakushuin,2004   **Statistical Physics II** Morikazu Toda,R. Kubo,Nobuhiko Saitō,Natsuki Hashitsume,N. Hashitsume,1991-11-14 Statistical Physics II introduces nonequilibrium theories of statistical mechanics from the viewpoint of the fluctuation disipation theorem Emphasis is placed on the relaxation from nonequilibrium to equilibrium states the response of a system to an external disturbance and general problems involved in deriving a macroscopic physical process from more basic underlying processes Fundamental concepts and methods are stressed rather than the numerous individual applications

**Statistical Physics II** Ryogo Kubo,Morikazu Toda,Natsuki Hashitsume,2012-12-06 Statistical Physics II introduces nonequilibrium theories of statistical mechanics from the viewpoint of the fluctuation disipation theorem Emphasis is placed on the relaxation from nonequilibrium to equilibrium states the response of a system to an external disturbance and general problems involved in deriving a macroscopic physical process from more basic underlying processes Fundamental concepts and methods are stressed rather than the numerous individual applications

**Statistical Physics I** Morikazu Toda,Ryogo Kubo,Nobuhiko Saito,2012-12-06 Statistical Physics I discusses the fundamentals of equilibrium statistical mechanics focussing on basic physical aspects No previous knowledge of thermodynamics or the molecular theory of gases is assumed Illustrative examples based on simple materials and photon systems elucidate the central ideas and methods
