Biocatalysis Gonzalo de Gonzalo, Pablo Domínguez de María, 2017-11-02 Implementing biocatalytic strategies in an industrial setting at a commercial scale is a challenging task necessitating a balance between industrial need against

economic viability With invited contributions from small and large scale chemical and pharmaceutical companies this book bridges the gap between academia and industry Contributors discuss current processes types of biocatalysts and improvements industrial motivation and key aspects to economically succeed With its focus on industry related issues this book will be a useful tool for future research by both practitioners and academics *Glycoscience* Joachim Thiem, Hugues Driguez, 1997 Annotation This book presents the state of the art in the synthesis very complex saccharide structures written by leading scientists at the forefront of this rapidly growing field Reflecting the particular significance in recent years of efficient and selective procedures employing enzymes for preparative purposes in the carbohydrate field a major proportion of the articles focus on these biocatalytic methods In addition recent strategies for the construction of unusual carbohydrates structures employing novel and creative methodologies are highlighted Further particular emphasis is placed on very complex saccharide structures as well as on special solutions to problems that are particularly challenging *Asymmetric and Selective Biocatalysis* Jose M. Palomo, Cesar Mateo, 2019-04-12 This Issue contains one communication six articles and two reviews The communication from Paola Vitale et al represents a work where whole cells were used as biocatalysts for the reduction of optically active chloroalkyl arylketones followed by a chemical cyclization to give the desired heterocycles Among the various whole cells screened baker's yeast *Kluyveromyces marxianus* CBS 6556 *Saccharomyces cerevisiae* CBS 7336 *Lactobacillus reuteri* DSM 20016 baker's yeast provided the best yields and the highest enantiomeric ratios 95:5 in the bioreduction of the above ketones In this respect valuable chiral non racemic functionalized oxygen containing heterocycles e.g. styrene oxide 2-phenyloxetane 2-phenyltetrahydrofuran amenable to be further elaborated on can be smoothly and successfully generated from their prochiral precursors Studies about pure biocatalysts with mechanistical studies application in different reactions and new immobilization methods for improving their stability were reported in five different articles The article by Su Yan Wang et al describes the cloning expression purification and characterization of an N-acetylglucosamine 2-epimerase from *Pedobacter heparinus* PhGn2E For this several N-acylated glucosamine derivatives were chemically synthesized and used to test the substrate specificity of the enzyme The mechanism of the enzyme was studied by hydrogen deuterium NMR The study at the anomeric hydroxyl group and C-2 position of the substrate in the reaction mixture confirmed the epimerization reaction via ring opening enolate formation Site directed mutagenesis was also used to confirm the proposed mechanism of this interesting enzyme The article by Forest H Andrews et al studies two enzymes benzoylformate decarboxylase BFDC and pyruvate decarboxylase PDC which catalyze the non oxidative decarboxylation of 2-keto acids with different specificity BFDC from *Pseudomonas putida* exhibited very limited activity with pyruvate whereas the PDCs from *S. cerevisiae* or from *Zymomonas mobilis* showed virtually no activity with benzoylformate phenylglyoxylate After studies using saturation mutagenesis the BFDC T377L A460Y variant was obtained with 10 000 fold increase in pyruvate benzoylformate The change was attributed to an improvement in the K_m value for pyruvate and a decrease in the k_{cat} value

for benzoylformate The characterization of the new catalyst was performed providing context for the observed changes in the specificity The article by Xin Wang et al compares two types of biocatalysts to produce D lysine L lysine in a cascade process catalyzed by two enzymes racemase from microorganisms that racemize L lysine to give D L lysine and decarboxylase that can be in cells permeabilized cells and the isolated enzyme The comparison between the different forms demonstrated that the isolated enzyme showed the higher decarboxylase activity Under optimal conditions 750 7 mmol L D lysine was finally obtained from 1710 mmol L L lysine after 1 h of racemization reaction and 0 5 h of decarboxylation reaction D lysine yield could reach 48 8% with enantiomeric excess ee of 99% In the article by Rivero and Palomo lipase from *Candida rugosa* CRL was highly stabilized at alkaline pH in the presence of PEG which permitted its immobilization for the first time by multipoint covalent attachment on different aldehyde activated matrices Different covalent immobilized preparation of the enzyme was successfully obtained The thermal and solvent stability was highly increased by this treatment and the novel catalysts showed high regioselectivity in the deprotection of per O acetylated nucleosides The article by Robson Carlos Alnoch et al describes the protocol and use of a new generation of tailor made bifunctional supports activated with alkyl groups that allow the immobilization of proteins through the most hydrophobic region of the protein surface and aldehyde groups that allows the covalent immobilization of the previously adsorbed proteins These supports were especially used in the case of lipase immobilization The immobilization of a new metagenomic lipase LipC12 yielded a biocatalyst 3 5 fold more active and 5000 fold more stable than the soluble enzyme The PEGylated immobilized lipase showed high regioselectivity producing high yields of the C 3 monodeacetylated product at pH 5 0 and 4 C Hybrid catalysts composed of an enzyme and metallic complex are also treated in this Special Issue The article by Christian Herrero et al describes the development of the Mn TpCPP Xln10A artificial metalloenzyme obtained by non covalent insertion of Mn III meso tetrakis p carboxyphenyl porphyrin Mn TpCPP 1 Mn into xylanase 10A from *Streptomyces lividans* Xln10A The complex was found able to catalyze the selective photo induced oxidation of organic substrates in the presence of RuII bpy 3 2 as a photosensitizer and CoIII NH₃ 5Cl 2 as a sacrificial electron acceptor using water as oxygen atom source The two published reviews describe different subjects with interest in the fields of biocatalysis and mix metallic biocatalysis respectively The review by Anika Scholtissek et al describes the state of the art regarding ene reductases from the old yellow enzyme family OYEs to catalyze the asymmetric hydrogenation of activated alkenes to produce chiral products with industrial interest The dependence of OYEs on pyridine nucleotide coenzyme can be avoided by using nicotinamide coenzyme mimetics In the review three main classes of OYEs are described and characterized The review by Yajie Wang and Huimin Zhao highlights some of the recent examples in the past three years that combine transition metal catalysis with enzymatic catalysis With recent advances in protein engineering catalyst synthesis artificial metalloenzymes and supramolecular assembly there is great potential to develop more sophisticated tandem chemoenzymatic processes for the synthesis of structurally complex chemicals In conclusion these nine

Pharmaceutical Biocatalysis Peter Grunwald, 2019-11-07 This volume provides an insight into the future strategies for commercial biocatalysis with a focus on sustainable technologies together with chemoenzymatic and biotechnological approaches to synthesize various types of approved and new active pharmaceutical ingredients (APIs) via proven and latest synthetic routes using single step biocatalytic or enzyme cascade reactions. Many of these drugs act as enzyme inhibitors as discussed in a chapter with a variety of examples. The targeted enzymes are involved in diseases such as different cancers metastatic and infectious diseases osteoporosis and cardiovascular disorders. The biocatalysts employed for API synthesis include hydrolytic enzymes alcohol dehydrogenases laccases imine reductases reductive aminases peroxygenases cytochrome P450 enzymes polyketide synthases transaminases and halogenases. Many of them have been improved with respect to their properties by engineering methods. The book discusses the syntheses of drugs including alkaloids and antibiotics non-ribosomal peptides antimalarial and antidiabetic drugs prenylated xanthenes antioxidants and many important chiral intermediates required for the synthesis of pharmaceuticals.

Science of Synthesis: Biocatalysis in Organic Synthesis Vol. 3 Kurt Faber, Wolf-Dieter Fessner, Nicholas J. Turner, 2015-03-11 The three Science of Synthesis volumes on Biocatalysis in Organic Synthesis present a broad contemporary overview on the state of the art in enzymatic methods for asymmetric synthesis suitable for academics and industrial researchers working in the field of organic synthesis. The goal is to start a new wave of enthusiasm for biocatalysis in the broader community and to give an overview of the field. Biocatalysis in Organic Synthesis offers critical reviews of organic transformations by experts including experimental procedures. The organization is based on the type of reaction performed under biocatalysis. Volume 3 begins with oxidation. A

chapter on enzyme catalyzed dihydroxylation is followed by reviews of alkane oxidation Oxidations of alcohols carbonyl compounds and heteroatoms are covered as are halogenations The use of biocatalysts in total synthesis cascade reactions and large scale industrial applications is considered Finally emerging trends are discussed
