*Rethinking Classroom Management* Patricia Sequeira Belvel, 2009-12-07 Many of today's discipline problems result from student responses to outdated practices. This book lives up to its title providing innovative approaches that demonstrate leadership rather than management. Teachers discover creative and proactive ways to engage students in the development of learning environments that are positively charged, cooperatively structured and self-governed. Dutchess Maye Fellow for Instructional Design, North Carolina Teacher Academy, Morrisville, NC. A classroom leadership model of prevention, intervention and problem solving for both teachers and students. Emphasizing a leadership model for effective classroom management rather than relying on strategies for compliance and control, this updated edition of the bestseller describes a comprehensive approach that encourages teachers to reevaluate their beliefs, roles and practices and engages students as partners in creating a powerfully supportive learning environment. Offering a unique perspective on classroom leadership that helps teachers address potential problems before learning is disrupted, this resource shows how integrating leadership into daily classroom life enhances learning by strengthening students' autonomy, self-esteem and connectedness with others. Reflecting the author's years of experience and filled with more real-life examples, new techniques and ready-to-use worksheets, the book provides an interactive process that allows teachers to foster leadership in themselves and their students. Includes classroom connections, personal connections, examples, checklists and reflective questions. With its distinctive and creative perspective on classroom management, *Rethinking Classroom Management*, Second Edition encourages teachers to become mentors and facilitators rather than classroom managers as they empower students to actively participate in their own learning.

**Learned Brain Self-Regulation for Emotional Processing and Attentional Modulation: From Theory to Clinical Applications** Sergio Ruiz, Ranganatha Sitaram, Niels Birbaumer, Francisco Javier Zamorano, 2016-10-19 Mounting evidence in the last years has demonstrated that self-regulation of brain activity can successfully be achieved by neurofeedback (NF). These methodologies have constituted themselves as new tools for cognitive neuroscience, establishing causal links between voluntary brain activations and cognition and behavior and as potential novel approaches for clinical applications in severe neuropsychiatric disorders, e.g. schizophrenia, depression, Parkinson's disease, etc. Current developments of brain imaging-based neurofeedback include the study of the behavioral modifications and neural reorganization produced by learned regulation of the activity of circumscribed brain regions and neuronal network activations. In a rapidly developing field, many open questions and controversies have arisen, i.e. choosing the proper experimental design, the adequate use of control conditions and subjects, the mechanism of learning involved in brain self-regulation and the still unexplored potential long-lasting effect on brain reorganization and clinical alleviation among others. This special issue on self-regulation of the brain of emotion and attention using NF approaches interested authors to report technical and methodological advances, scientific investigations in understanding the relation between brain activity and behaviour using NF and finally studies developing clinical treatment of emotional and attentional disorders. The editors of
