Semantic Analysis:

Semantic Analysis Cliff Goddard, 2011-08-04 A lively introduction to methods for articulating the meanings of words and sentences and revealing connections between language and culture It shows that the study of meaning can be rigorous insightful and exciting

Stochastically-Based Semantic Analysis Wolfgang Minker, Alex Waibel, Joseph Mariani, 2012-12-06 Stochastically Based Semantic Analysis investigates the problem of automatic natural language understanding in a spoken language dialog system The focus is on the design of a stochastic parser and its evaluation with respect to a conventional rule based method Stochastically Based Semantic Analysis will be of most interest to researchers in artificial intelligence especially those in natural language processing computational linguistics and speech recognition It will also appeal to practicing engineers who work in the area of interactive speech systems

Handbook of Latent Semantic Analysis Thomas K. Landauer, Danielle S. McNamara, Simon Dennis, Walter Kintsch, 2007-02-15 The Handbook of Latent Semantic Analysis is the authoritative reference for the theory behind Latent Semantic Analysis LSA a burgeoning mathematical method used to analyze how words make meaning with the desired outcome to program machines to understand human commands via natural language rather than strict programming protocols The first book

Indian Semantic Analysis Eivind Kahrs, 1998 The Indian tradition of semantic elucidation known as nirvacana analysis represented a powerful hermeneutic tool in the exegesis and transmission of authoritative scripture Nevertheless it has all too frequently been dismissed by modern scholars as anything from folk etymology to a primitive forerunner of historical linguistics Eivind Kahrs argues that such views fall short of explaining both its acceptance within the sophisticated grammatical tradition of vyakarana and its effective usage in the processing of Sanskrit texts He establishes his argument by investigating the learned Sanskrit literature of Saiva Kashmir and explains the nirvacana tradition in the light of a model substitution used at least since the time of the Upanisads and later refined in the technical literatures of grammar and ritual According to this model a substitute adesa takes the place sthana of the original placeholder sthanin On the basis of a searching analysis of Sanskrit texts the author argues that this sthana place can be interpreted as meaning the model thereby providing favourable circumstances for reinterpretation and change

Logical Theory and Semantic Analysis S. Stenlund, 2012-12-06

Semantic Analysis of Verbal Collocations with Lexical Functions Alexander Gelbukh, Olga Kolesnikova, 2012-08-09 This book is written for both linguists and computer scientists working in the field of artificial intelligence as well as to anyone interested in intelligent text processing Lexical function is a concept that formalizes semantic and syntactic relations between lexical units Collocational relation is a type of institutionalized lexical relations which holds between the base and its partner in a collocation Knowledge of collocation is important for natural language processing because collocation comprises the restrictions on how words can be used together The book shows how collocations can be annotated with lexical functions in a computer readable dictionary allowing their precise semantic

analysis in texts and their effective use in natural language applications including parsers high quality machine translation periphrasis system and computer aided learning of lexica The books shows how to extract collocations from corpora and annotate them with lexical functions automatically To train algorithms the authors created a dictionary of lexical functions containing more than 900 Spanish disambiguated and annotated examples which is a part of this book The obtained results show that machine learning is feasible to achieve the task of automatic detection of lexical functions

Semantic Analysis and Understanding of Human Behavior in Video Streaming Alberto Amato,Vincenzo Di Lecce,Vincenzo

Piuri,2012-09-18 Semantic Analysis and Understanding of Human Behaviour in Video Streaming investigates the semantic analysis of the human behaviour captured by video streaming and introduces both theoretical and technological points of view Video analysis based on the semantic content is in fact still an open issue for the computer vision research community especially when real time analysis of complex scenes is concerned This book explores an innovative original approach to human behaviour analysis and understanding by using the syntactical symbolic analysis of images and video streaming described by means of strings of symbols A symbol is associated to each area of the analyzed scene When a moving object enters an area the corresponding symbol is appended to the string describing the motion This approach allows for characterizing the motion of a moving object with a word composed by symbols By studying and classifying these words we can categorize and understand the various behaviours The main advantage of this approach lies in the simplicity of the scene and motion descriptions so that the behaviour analysis will have limited computational complexity due to the intrinsic nature both of the representations and the related operations used to manipulate them Besides the structure of the representations is well suited for possible parallel processing thus allowing for speeding up the analysis when appropriate hardware architectures are used A new methodology for design systems for hierarchical high semantic level analysis of video streaming in narrow domains is also proposed Guidelines to design your own system are provided in this book Designed for practitioners computer scientists and engineers working within the fields of human computer interaction surveillance image processing and computer vision this book can also be used as secondary text book for advanced level students in computer science and engineering

Aspects of Automatic Text Analysis Alexander Mehler,Reinhard Köhler,2007-06-24 The significance of natural language texts as the prime information structure for the management and dissemination of knowledge is as the rise of the web shows still increasing Making relevant texts available in different contexts is of primary importance for efficient task completion in academic and industrial settings Meeting this demand requires automatic form and content based processing of texts which enables to reconstruct or even to explore the dynamic relationship of language system text event and context type The rise of new application areas disciplines and methods e g text and web mining testify to the importance of this task Moreover the growing area of new media demands the further development of methods of text analysis with respect to their computational linguistic information theoretical and mathematical underpinning This book

contributes to this task It collects contributions of authors from a multidisciplinary area who focus on the topic of automatic text analysis from several i e linguistic mathematical and information theoretical perspectives It describes methodological as well as methodical foundations and collects approaches in the field of text and corpus linguistics In this sense it contributes to the computational linguistic and information theoretical grounding of automatic text analysis
