Semantic Network Analysis in Social Sciences Elad Segev, 2021-11-29 Semantic Network Analysis in Social Sciences introduces the fundamentals of semantic network analysis and its applications in the social sciences Readers learn how to easily transform any given text into a visual network of words co occurring together a process that allows mapping the main themes appearing in the text and revealing its main narratives and biases Semantic network analysis is particularly useful today with the increasing volumes of text based information available It is one of the developing cutting edge methods to organize identify patterns and structures and understand the meanings of our information society The first chapters in this book offer step by step guidelines for conducting semantic network analysis including choosing and preparing the text selecting desired words constructing the networks and interpreting their meanings Free software tools and code are also presented The rest of the book displays state of the art studies from around the world that apply this method to explore news political speeches social media content and even to organize interview transcripts and literature reviews Aimed at scholars with no previous knowledge in the field this book can be used as a main or a supplementary textbook for general courses on research methods or network analysis courses as well as a starting point to conduct your own content analysis of large texts

Intelligent Scene Modelling Information Systems Georgios Miaoulis, Dimitri Plemenos, 2009-03-06 This book is dedicated to and contains the latest research in intelligent scene modelling information systems Declarative scene modeling techniques are presented as well as their implementation in an intelligent information system

Graph Neural Network Methods and Applications in Scene Understanding Weibin Liu, Huaqing Hao, Hui Wang, Zhiyuan Zou, Weiwei Xing, 2025-01-03 The book focuses on graph neural network methods and applications for scene understanding Graph Neural Network is an important method for graph structured data processing which has strong capability of graph data learning and structural feature extraction Scene understanding is one of the research focuses in computer vision and image processing which realizes semantic segmentation and object recognition of

image or video In this book the algorithm system design and performance evaluation of scene understanding based on graph neural networks have been studied First the book elaborates the background and basic concepts of graph neural network and scene understanding then introduces the operation mechanism and key methodological foundations of graph neural network The book then comprehensively explores the implementation and architectural design of graph neural networks for scene understanding tasks including scene parsing human parsing and video object segmentation The aim of this book is to provide timely coverage of the latest advances and developments in graph neural networks and their applications to scene understanding particularly for readers interested in research and technological innovation in machine learning graph neural networks and computer vision Features of the book include self supervised feature fusion based graph convolutional network is designed for scene parsing structure property based graph representation learning is developed for human parsing dynamic graph convolutional network based on multi label learning is designed for human parsing and graph construction and graph neural network with transformer are proposed for video object segmentation

Computer Vision Systems

Henrik I. Christensen,1998-12-18 Computer Vision has now reached a level of maturity that allows us not only to perform research on individual methods but also to build fully integrated computer vision systems of a significant complexity This opens up a number of new problems related to architectures systems integration validation of stems using benchmarking techniques and so on So far the majority of vision conferences have focused on component technologies which has motivated the organization of the First International Conference on Computer Vision Systems ICVS It is our hope that the conference will allow us not only to see a number of interesting new vision techniques and systems but hopefully also to define the research issues that need to be addressed to pave the way for more wide scale use of computer vision in a diverse set of real world applications ICVS is organized as a single track conference consisting of high quality previously unpublished contributed papers on new and original research on computer vision systems All contributions will be presented orally A total of 65 papers were submitted for consideration by the conference All papers were viewed by three reviewers from the program committee Thirty two of the papers were selected for presentation ICVS 99 is being held at the Alfredo Kraus Auditorium and Convention Centre in Las Palmas on the lovely Canary Islands Spain The setting is sprightly which seems only appropriate as the basis for a new conference

Computer Vision - ECCV 2018 Vittorio Ferrari,Martial Hebert,Cristian Sminchisescu,Yair Weiss,2018-10-05 The sixteen volume set comprising the LNCS volumes 11205 11220 constitutes the refereed proceedings of the 15th European Conference on Computer Vision ECCV 2018 held in Munich Germany in September 2018 The 776 revised papers presented were carefully reviewed and selected from 2439 submissions The papers are organized in topical sections on learning for vision computational photography human analysis human sensing stereo and reconstruction optimization matching and recognition video attention and poster sessions

3D Visual Communications

Guan-Ming Su,Yu-chi Lai,Andres Kwasinski,Haohong Wang,2012-12-12 Provides coverage of the major theories and technologies involved in the

lifecycle of 3D video content delivery Presenting the technologies used in end to end 3D video communication systems this reference covers 3D graphics and video coding content creation and display and communications and networking It covers the full range of key areas from the fundamentals of 3D visual representation to the latest 3D video coding techniques relevant communication infrastructure and networks to the 3D quality of experience The book is structured to logically lead readers through the topic starting with generic and fundamental information continuing with a detailed section of different visualisation techniques before concluding with an extensive view of 3D mobile communication systems and trends The authors give most focus to four important areas 3D video coding and communications 3D graphics gaming and mobile communications end to end 3D ecosystem including 3D display 3D player networking facility and 3D quality issues and future communications and networks advances for emerging 3D experience Presents the theory and key concepts behind the latest 3D visual coding framework standards and corresponding quality assessment Provides fundamental material which forms the basis for future research on enhancing the performance of 3D visual communications over current and future wireless networks Covers important topics including 3D video coding and communications 3D graphics gaming and mobile communications end to end 3D ecosystem and future communications and networks advances for emerging 3D experience Essential reading for engineers involved in the research design and development of 3D visual coding and 3D visual transmission systems and technologies as well as academic and industrial researchers
