*Rise of the Dragon* Henry Gee, 2001-11 Over the past decade fossil finds from China have stunned the world grabbing headlines and changing perceptions with a wealth of new discoveries Many of these finds were first announced to English speakers in the journal Nature Rise of the Dragon gathers together sixteen of these original reports some augmented with commentaries originally published in Nature's News and Views section Perhaps the best

known of these new Chinese fossils are the famous feathered dinosaurs from Liaoning Province which may help end one of the most intense debates in paleontology whether birds evolved from dinosaurs But other finds have been just as spectacular such as the minutely preserved to the cellular level animal embryos of the 670 million year old Duoshantuo phosphorites or the world's oldest known fish from the Chengjiang formation in southwestern Yunnan Province Rise of the Dragon makes descriptions and detailed discussions of these important finds available in one convenient volume for paleontologists and serious fossil fans

**Time Traveler** Michael Novacek, 2003-03-15 True stories of fossil hunting adventures around the globe from a world class field scientist and a highly entertaining writer The American Scholar Michael Novacek a world renowned paleontologist who has discovered important fossils on virtually every continent is an authority on patterns of evolution and on the relationships among extinct and extant organisms Time Traveler is his captivating account of how his boyhood enthusiasm for dinosaurs became a lifelong commitment to vanguard science He takes us with him as he discovers fossils in his own backyard in Los Angeles then goes looking for them in the high Andes the black volcanic mountains of Yemen and the incredibly rich fossil badlands of the Gobi Desert Wherever Novacek goes he searches for still undiscovered evidence of what life was like on Earth millions of years ago Along the way he has almost drowned been stung by deadly scorpions been held at gunpoint by a renegade army and nearly choked in raging dust storms Fieldwork is very demanding in a host of unusual dramatic sometimes hilarious ways and Novacek writes of its alluring perils with affection and discernment But in addition to being an enthralling adventure story Time Traveler makes sense of many complex themes about dinosaur evolution continental drift mass extinctions new methods for understanding ancient environments and the evolutionary secrets of DNA in fossil organisms Includes photos and illustrations A superb introduction to paleontology Edward O Wilson An engaging book that gives us an excellent sense of the way paleontologists have arrived at their world shaking conclusions The New York Times Book Review Novacek offers a spellbinding natural history of our planet as well as the equally fascinating story of how he fell into the profession Publishers Weekly

*Ingrained* Lesley Head, Jennifer Atchison, 2016-05-23 Plants are fundamental players in human lives underpinning our food supply and contributing to the air we breathe but they are easy to take for granted and have received insufficient attention in the social sciences This book advances understanding of human plant relations using the example of wheat Theoretically this book develops new insights by bringing together human geography biogeography and archaeology to provide a long term perspective on human wheat relations Although the relational more than human turn in the social sciences has seen a number of plant related studies these have not yet fully engaged with the question of what it means to be a plant The book draws on diverse literatures to tackle this question advancing thinking about how plants act in their worlds and how we can better understand our shared worlds Empirically the book reports original ethnographic research on wheat production processing and consumption in a context of globalisation drought and climate change and traces the complex networks of wheat using a methodology of following it and its people The ethnobotanical study captures a number of moments in the life of Australian wheat on the farm at the supermarket in the lives of coeliac sufferers in laboratories and in industrial factories This study demands new ways of thinking about wheat geographies going beyond the rural landscape to urban and industrial frontiers and being simultaneously local and global in perspective and connection

*The Genealogical Science* Nadia Abu El-Haj, 2012-01-13 The Genealogical Science analyzes the scientific work and social implications of the flourishing field of genetic history A biological discipline that relies on genetic data in order to reconstruct the geographic origins of contemporary populations their histories of migration and genealogical connections to other present day groups this historical science is garnering ever more credibility and social reach in large part due to a growing industry in ancestry testing In this book Nadia Abu El Haj examines genetic history s working assumptions about culture and nature identity and biology and the individual and the collective Through the example of the study of Jewish origins she explores novel cultural and political practices that are emerging as genetic history s claims and facts circulate in

the public domain and illustrates how this historical science is intrinsically entangled with cultural imaginations and political commitments. Chronicling late nineteenth to mid twentieth century understandings of race, nature and culture, she identifies continuities and shifts in scientific claims, institutional contexts and political worlds in order to show how the meanings of biological difference have changed over time. In so doing, she gives an account of how and why it is that genetic history is so socially felicitous today and elucidates the range of understandings of the self, individual and collective, this scientific field is making possible. More specifically, through her focus on the history of projects of Jewish self-fashioning that have taken place on the terrain of the biological sciences, *The Genealogical Science* analyzes genetic history as the latest iteration of a cultural and political practice now over a century old.

biological tools such as molecular and genetic techniques regulating gene expression as well as conventional indigenous practices in arthropod conservation The contributors reiterate the importance of documenting and understanding the biology of arthropods from a holistic perspective before addressing conservation issues at large This book offers a valuable resource for all zoologists entomologists ecologists conservation biologists policy makers teachers and students interested in the conservation of biological resources
