Abbasov, 2018-01-31 With climate change erosion and human encroachment on coastal environments growing all over the world it is increasingly important to protect populations and environments close to the sea from storms tsunamis and other events that can be not just costly to property but deadly This book is one step in bringing the science of protection from these events forward the most in depth study of its kind ever published The analytic and numerical modeling problems of nonlinear wave activities in shallow water are analyzed in this work Using the author's unique method described herein the equations of shallow water are solved and asymmetries that cannot be described by the Stokes theory are solved Based on analytical expressions the impacts of dispersion effects to wave profiles transformation are taken into account The 3D models of the distribution and refraction of nonlinear surface gravity wave at the various coast formations are introduced as well The work covers the problems of numerical simulation of the run up of nonlinear surface gravity waves in shallow water transformation of the surface waves for the 1D case and models for the refraction of numerical modeling of the run up of nonlinear surface gravity waves at beach approach of various slopes 2D and 3D modeling of nonlinear surface gravity waves are based on Navier Stokes equations In 2D modeling the influence of the bottom of the coastal zone on flooding of the coastal zone during storm surges was investigated Various stages of the run up of nonlinear surface gravity waves are introduced and analyzed The 3D modeling process of the run up is tested for the coast protection work of the slope type construction Useful for students and veteran engineers and scientists alike this is the only book covering these important issues facing anyone working with coastal models and ocean coastal and civil engineering in this area **Diving Manual, 1943** United States.
