Scriptinformatics Dr. habil. Gábor Hosszú,2021-02-05 Scripts writing systems usually belong to specific languages and have temporal spatial and cultural characteristics The evolution of scripts has been the subject of research for a long time This is probably because the long term development of human thinking is reflected in the surviving script relics many of which are still undeciphered today The book presents the study of the script evolution with the mathematical tools of systematics phylogenetics and bioinformatics In the research described the script is the evolutionary taxonomic unit taxon which is analogous to the concept of biological species Among the methods of phylogenetics phenetics classifies the investigated taxa on the basis of their morphological similarity and does not primarily examine genealogical relationships Due to the scarcity of morphological diversity of scripts features random coincidences of evolution independent features are much more common in scripts than in biological species thus phenetic modelling based solely on morphological features can lead to erroneous results For this reason phenetic modeling has been extended with evolutionary considerations thereby allowing the modelling uncertainties observed in the script evolution to be addressed due to the large number of random coincidences homoplasies characterizing each script The book describes an extended phenetic method developed to investigate the script evolution This data driven approach helps to reduce the impact of the uncertainties inherent in the phenetic model due to the large number of homoplasies that occur during the evolution of scripts The elaborated phenetic and evolutionary analyses were applied to the Rovash scripts used on the Eurasian Steppe Grassland including the Turkic Rovash Turkic Runic runiform and the Sz kely Hungarian Rovash The evaluation of the extended phenetic model of the scripts the various phenograms the script spectra and the group spectra helped to reconstruct the main ancestors and evolutionary stages of the investigated scripts      **Language Monographs** Linguistic Society of America,1925      Cornell Reading-courses ,1914      *AutoCAD Platform Customization* Lee Ambrosius,2015-04-27 Take control of AutoCAD for a more efficient streamlined workflow AutoCAD Platform Customization is the most comprehensive guide to streamlining and personalizing the AutoCAD platform The AutoLISP and VBA programming languages open up a myriad of customization options and this book provides expert guidance toward applying them to AutoCAD Civil 3D Plant 3D and other programs based on the Autodesk AutoCAD platform Detailed discussions backed by real world examples and step by step tutorials provide user friendly instruction and downloadable datasets allow for hands on learning Through customization you can increase screen real estate streamline workflows and create more accurate drawings by unleashing powerful programming languages that allow the user to command the software how to work instead of the other way around AutoCAD customization is commonly performed by system administrators and CAD managers but senior drafters and savvy users are increasingly

**Visual Mathematics and Cyberlearning** Dragana Martinovic, Viktor Freiman, Zekeriya Karadag, 2012-12-24 This first book in the series will describe the Net Generation as visual learners who thrive when surrounded with new technologies and whose needs can be met with the technological innovations. These new learners seek novel ways of studying such as collaborating with peers, multitasking, as well as use of multimedia, the Internet, and other Information and Communication Technologies. Here we present mathematics as a contemporary subject that is engaging, exciting, and enlightening in new ways. For example, in the distributed environment of cyber space, mathematics learners play games, watch presentations on YouTube, create Java applets of mathematics simulations, and exchange thoughts over the Instant Messaging tool. How should mathematics education resonate with these learners and technological novelties that excite them? [Report](#), 1987

**Computer Vision Metrics** Scott Krig, 2014-06-14 Computer Vision Metrics provides an extensive survey and analysis of over 100 current and historical feature description and machine vision methods with a detailed taxonomy for local, regional, and global features. This book provides necessary background to develop intuition about why interest point detectors and feature descriptors actually work, how they are designed, with observations about tuning the methods for achieving robustness and invariance, targets for specific applications. The survey is broader than it is deep, with over 540 references provided to dig deeper. The taxonomy includes search methods, spectra, components, descriptor representation, shape, distance functions, accuracy, efficiency, robustness, and invariance attributes, and more. Rather than providing how-to source code examples and shortcuts, this book provides a counterpoint discussion to the many fine OpenCV community source code resources available for hands-on practitioners.
