How the Body Shapes the Mind Shaun Gallagher, 2006-10-12 How the Body Shapes the Mind is an interdisciplinary work that addresses philosophical questions by appealing to evidence found in experimental psychology neuroscience studies of pathologies and developmental psychology There is a growing consensus across these disciplines that the contribution of embodiment to cognition is inescapable Because this insight has been developed across a variety of disciplines however there is still a need to develop a common vocabulary that is capable of integrating discussions of brain mechanisms in neuroscience behavioural expressions in psychology design concerns in artificial intelligence and robotics and debates about embodied experience in the phenomenology and philosophy of mind Shaun Gallagher s book aims to contribute to the formulation of that common vocabulary and to develop a conceptual framework that will avoid both the overly reductionistic approaches that explain everything in terms of bottom up neuronal mechanisms and inflationistic approaches that explain everything in terms of Cartesian top down cognitive states Gallagher pursues two basic sets of questions The first set consists of questions about the phenomenal aspects of the structure of experience and specifically the relatively regular and constant features that we find in the content of our experience If throughout conscious experience there is a constant reference to one s own body even if this is a recessive or marginal awareness then that reference constitutes a structural feature of the phenomenal field of consciousness part of a framework that is likely to determine or influence all other aspects of experience The second set of questions concerns aspects of the structure of experience that are more hidden those that may be more difficult to get at because they happen before we know it They do not normally enter into the content of experience in an explicit way and are often inaccessible to reflective consciousness To what extent and in what ways are consciousness and cognitive processes which include experiences related to perception memory imagination belief judgement and so forth shaped or structured by the fact that they are embodied in this way

Dynamic systems theory and embodiment in psychotherapy research. A new look at process and outcome Sergio Salvatore, Wolfgang Tschacher, Omar

Carlo Gioacchino Gelo, Sabine C Koch, 2016-04-11 In an attempt to cease from reducing the world and its emergent phenomena to linear modeling and analytic dissection Dynamic Systems Theories DST and Embodiment theories and methods aim at accounting for the complex dynamic and non linear phenomena that we constantly deal with in psychology For instance DST and Embodiment can enrich psychology's understanding of the communicative process both in clinical and non clinical settings In psychotherapy an important amount of research has shown that next to other ingredients the therapeutic relationship is the most important active factor contributing to psychotherapy outcome These findings give communication a central role in the psychotherapy process In the traditional view the underlying model of understanding psychotherapy processes is that of a number of components summatively coming together enabling us to make a linear causal prediction Yet communication is inherently dynamic A shift to viewing the communication process in psychotherapy as a field dynamic phenomenon helps us to take into account nonlinear phenomena such as feedback processes within and between persons We thus propose an embodied enactive dynamic systems view as a new theoretical and methodological perspective that can more realistically capture what happens among and between two persons in psychotherapy This view reaches beyond the current narrow model of psychotherapy research DST and Embodied Enactive Approaches can offer solutions to the loss of non linear phenomena the complex dynamics of reality and the holistic level of analysis DST and Embodied Enactive Approaches have developed not in a single discipline but in a joined movement based on various fields such as physics biology robotics anthropology philosophy linguistics neuroscience and psychology and have only recently entered clinical theorizing The two new paradigms have already triggered a rethinking of the therapeutic exchange by recognizing the embodied nature of psychological and communicative phenomena Their integration opens up a promising scenario in the field of psychotherapy research developing new profoundly transdisciplinary theoretical concepts methodologies and standards of knowledge The notion of field dynamics enables us to account for the role of the communicational context in the regulation of intra psychological processes while at the same time avoiding the pitfalls of an ontologization of the hierarchy of systemic organization Moreover the new approach implements methodological strategies that can transcend the conventional opposition between idiographic and nomothetic sciences **The Nikolaïs/Louis Dance**
