Structure and Architecture Angus J Macdonald, 2007-06-07 Structure and Architecture is an essential textbook for students and practitioners of architecture and structural engineering MacDonald explains the basic principles of structure and describes the ranges of structure types in current use Furthermore the book links these topics directly with the activity of architectural design and criticism An update of the first edition Structure and Architecture 2ed includes a revised opening chapter and a new section that discusses prominent buildings constructed since the last edition was published in 1994 Angus MacDonald deals with structures holistically relating detailed topics back to the whole structure and building He aims to answer the questions What are architectural structures How does one define the difference between the structure of a building and all of the other components and elements of which it consists What are the requirements of structures What is involved in their design An understanding of the concepts involved in answering these

questions and an appreciation of how the structure of a building functions enhances the ability of an individual to appreciate its architectural quality This book is unique in that it discusses the structural component of architectural design in the context of visual and stylistic issues *Structures by Design* Rob Whitehead,2019-07-19 Winner of the 2021 TAA Textbook Excellence Award Honorable Mention of the 2021 BTES Book Award *Structures by Design* Thinking Making Breaking is a new type of structures textbook for architects who prefer to learn using the hands on creative problem solving techniques typically found in a design studio Instead of presenting structures as abstract concepts defined by formulas and diagrams this book uses a project based approach to demonstrate how a range of efficient effective and expressive architectural solutions can be generated tested and revised Each section of the book is focused on a particular manner by which structural resistance is provided Form Arches and Cables Sections Beams Slabs and Columns Vectors Trusses and Space Frames Surfaces Shells and Plates and Frames Connections and High Rises The design exercises featured in each chapter use the Think Make Break method of reiterative design to develop and evaluate different structural options A variety of structural design tools will be used including the human body physical models historical precedents static diagrams traditional formulae and advanced digital analysis The book can be incorporated into various course curricula and studio exercises because of the flexibility of the format and range of expertise required for these explorations More than 500 original illustrations and photos provide example solutions and inspiration for further design exploration **Integrated Buildings** Leonard R. Minority Policy Brenton Prosser,Richard Denniss,2015-03-02 Topical and up to the minute Minority Policy Rethinking governance when parliament matters explores the influence of marginal parliamentarians both within the major parties and on the cross benches in the formations of contemporary public policy Despite Australia having minority government in some form for almost three decades in theoretical and popular terms it seems that this nation has not yet come to terms with minority as the new norm Further prominent policy cycle theory overlooks the subtle but significant influence of marginal parliamentarians on public policy This book argues that these influences not only have important implications for the outcomes of public policy but also the work of policy scholars departmental policy makers and policy advocates Drawing on the experiences of two former policy advisers who have worked at the coalface of policy making as well as on examples from the last two parliaments Minority Policy takes the discussion up to and beyond the introduction of the new Senate in July 2014 to take in the significant impact of this much more complex Upper House
