**Logic Versus Approximation** Wolfgang Lenski (Ed ),2004-10-27 Nowadays knowledge based systems research and development essentially employs two paradigms of reasoning There are on the one hand the logic based approaches where logic is to be understood in a rather broad sense usually these approaches are used in symbolic domains where numerical calculations are not the core challenge On the other hand we find approximation oriented reasoning methods of these kinds are mainly applied in numerical domains where approximation is part of the scientific methodology itself However from an abstract level all these approaches do focus on similar topics and arise on various levels such as problem modeling inference and problem solving techniques algorithms and mathematical methods mathematical relations between discrete and continuous properties and are integrated in tools and applications In accordance with the unifying vision and research interest of Michael M Richter and in correspondence to his scientific work this book presents 13 revised full papers advocating the integration of logic based and approximation oriented approaches in knowledge processing

Leading Issues in Social Knowledge Management David Gurteen,2012-01-01 Perhaps one of the most surprising if not actually unsettling things about the Internet and the Web is that there is always something new on the horizon and that it is very difficult to see where this new technology will take us When ICT was just about big computers and organisational systems it was pretty obvious where the technology was moving us We all knew about Moore s Law and that we were going to have greater capacity smaller and faster devices every year And during the 1990s and the first decade of the third millennium we all became used to what the Internet and the Web had to offer But Social Software in the form of Web 2 0 is different It has put technology in the hands of people who we would never have given it a second thought a few years ago Leading Issues in Social Knowledge Management contains leading edge research which addresses some of the main issues for those of us who want to use Social Software in a Knowledge Management context or who want to study it or research it There are 10 research papers as well as an introduction from David Gurteen who is a leading thinker in this field
